

All these ifs have evaluated to False since s is 0

```
if (s!=0) break
else if(s!=0) break
else if(s!=0) break
else if(s!=0) break
....
else if(s!=0) break
```

These two blocks must be atomic w.r.t. each other and w.r.t. themselves

Or in other words, mutually exclusive or indivisible

The last if that is about to break the while loop
