

# Project report

During the preparation of CS101 project we learnt many things. It was wonderful experience and we all realised how useful team work would be. We understood many things in C++. We referred to different websites and learnt some graphics.

Initially we faced some difficulties in writing algorithm for code but then by group discussion , with the help of our TA's and internet we were able to sort out problems. We learned to tackle many things and we learned many functions that a scientific calculator could do which we were unknown of. We learnt to coordinate with each other as we all haven't made any kind of CS project especially at this level so it was fun to do it. we also assign different task to our team member and learnt to help our friends and we stick to the team

work. We also learnt how to overcome pressure if we have to submit the project in given deadline.

In the last while doing debugging we came to know about several small errors which lead to increase in our attentive power.

### **TEAM MEMBERS:**

- 1.Amit Sachan
- 2.Rahul Choudhary
- 3.Tejaswini Allikanti
