DATE	WORK
07/10/2014	Had a group meeting where we finalized the project topic and submitted it to out TA. Also had a brief discussion on the program outline.
09/10/2014	Read the numerical methods for solving the problems. Found difficulty in implementing it. So thought of changing the topic.
10/10/2014	Thought of many options to decide as our project topic. Had many discussions with a few Friends and acquaintances.
11/10/2014	We had a group meeting where we finalized our topic and also had a rough session on our Agenda.
15/10/2014	We had another group meeting where we started writing the code and the SRS. But got stuck in the middle. We need to implement file operation which we do not know yet. We need to discuss it with our TA.
17/10/2014	Our TA helped us to find the problem and its solution which we were facing while executing The written code. Learning about file handling operations and trying to implement it in the program.
18/10/2014	I wrote some more codes, implemented structures in the program. We sat together and worked on SRS primarily and also on project report and user manual. I prepared the variable list and the introduction of the SRS.
19/10/2014	Made some modifications to the code. Suggested some changes to the SRS and User Manual.
24/10/2014	Tried a lot to construct the program using file handling operations (Watched lecture videos, Visited different sites, etc.) But ultimately failed.
19/11/2014	Again tried for file handling but this time also I failed. I was only able to open a file and read it. Also tried taking help from friends. But sensing the lack of time, decided to do the program without using file handling operations. The basic coding is 75% done.
20/11/2014	Had a group meeting where we worked on improving the codes, and the user manual.
23/11/2014	Group meeting. We editted the SRS and the project report, also added comments on the Program.
24/11/2014	Had the last meeting. Made some final modifications to the project.
