November 16, 2014 : Monday : 11 pm to 1 am

I fixed our first meeting on 16th because at first end-semester exams were approaching, so we have to study for them. Then one whole week there were exams going on…
Just after end-sems, we want to relax.
On 16th I thought that we must complete CS project now as end-sem of CS was also coming.

In our first meet we decided on which days we have to make CS project. It was decided that we will now make CS project for 3 days, and then we will study for our end-sem of CS. Today's meet was just for fun, but we have taken some important decisions.

November 17, 2014 : Tuesday : 11 am to 12 noon

We meet for our first official meetings to decide what we are going to do today in the night. We decided that today we will discuss how to make minesweeper board first. We decided the how to write our requirement in a program.
Next meet was decided on today's night.

November 17, 2014 : Tuesday : 9 pm to 2 am

We had already decided today we will make Minesweeper board. I had thought an idea but the problem was we don't know how to arrange mines in random manner. So we started with assuming that mines are already arranged. Then we started coding using three different functions for three different levels. We managed to assigning no. on the Minesweeper board as no. of mines near to it.

November 19, 2014 : Thursday : 10 pm to 3 am

Before exam, I scheduled our last meeting. Because I also have to prepare for Endsem exam. I have thought we must complete our coding. As I know C++ much better than both other

member. So, I took the responsibility for the coding. Last time we had started coding only by defining functions. As we were thinking it was much harder to write coding with functions. It took a lot of times. We finished coding till beginner's level, builded and executed it. Some errors came which were removed. Then it worked but not as I was expected. But we all had tired and bored. So, we parted away.

November 23, 2014 : Sunday : 10 pm to 3 am

This was our last night. I aimed completing the coding. We had done beginner's level coding. We extended it to other levels i.e. Amateur & Professional. As we thought it were not going to be easy. We got tired and bored of this. We took a break to get relief from all this. After 30 min break, again we were in our full strength and get started to complete the coding. Finally, we removed the errors and then our Minesweeper executed. There were more errors in Amateur & Professional Level.
We thought to debug it tomorrow.

November 24, 2014 : Monday : 3 pm to 12 night

Today, we have to complete our SRS file, User Manual and Project Overview. It was going to take long time. So, we divided our works. We were discussing and typing.
I was debugging the project. We had worked for 6 continuous hours, then dinner break, then again worked for 3 hours.

We modified all files that were submitted during stage-1. And finally, our project were ready.
