

## SECOND STAGE DIARY ENTRIES

Date	Working hours
21/10/14                      Tuesday lab session	2
Today we discussed about how to solve a given syntax. Then we wrote several functions to be implemented on calculator. Me and Vamshi were involved in those work while Shubham and Rahul were searching about graphics part.	
25/10/14	2
Today we didn't do much work. We were fighting because initially we thought of giving inputs by keyboard but later we decided to give input by mouse. So we needed to change part of code but it was not big problem.	
4/11/14	1
Since there was no quiz we discussed about our project. We already wrote functions and worked on brackets part. At that time we came to know about Abhiram G Ranade description on simple cpp and his book.	
17/11/14	2
After complete endsem exams we finally met on evening to complete our code. Me and Vamshi discussed on evaluate function on how to solve equation. Shubham started working on his own graphics part on designing the screen.	
18/11/14	5
Me and Vamshi discussed on recursive way to solve problems. Rahul wrote code on hyperbolic function. Shubham worked on graphical part and completed designed the screen.	
19/11/14	5
Me and vamshi checked the code that we wrote and fixed minor errors. Rahul wrote code on inverse trigonometric functions. the display screen was also finalised by Shubham and he started working on graphical input and display.	
20/11/14	5
Checking that our code works properly was still going on. Shubham also asked me to work on taking inputs from canvas screen which he has specified the coordinates. Vamshi was completing the code on other functions.	
23/11/14	4
We finally completed evaluation part only display part was left. Shubham also wrote code on solving linear equations, quadratic and statistical part.	
24/11/14	8
We finally completed our display answer part on canvas screen. Later all files was merged and calculator was working properly.
