Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Outline

- The essence, the requirements, and the goals of research
- Possible effects of Gen AI
- How should we use Gen AI

Disclaimer: My focus is not on

- tactical and practical considerations of how to use Gen AI, but on
 - strategic and ethical considerations of the use of Gen AI
- Richard Hamming on research
 - Conclusions

In Search of Research?

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- Observed Phenomena with no explanations
 - Puzzles and mysteries
- Lacunae in the known theory and/or practice
 - The need of a better understanding/method
 - Innovative ideas
- Innovative ideas waiting for new applications
 - Discovery of new puzzles, mysteries and/or lacunae

Research could involve any of the above, or none of the above

The Essence of Research

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- Research is a game of innovative ideas that are significant
Even an experimental research begins with an observation and speculation
- The significance of ideas could lie in any of the following:
 - Beauty
 - Utility
 - Enhancement of knowledge

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Aesthetics

- Total is greater than the sum of the parts

“Scientists study science not because it is useful, but because it is beautiful. Here I do not talk about the beauty of appearance or beauty of qualities . . . Here I talk about that profound beauty which comes from a harmonious order of parts . . .”

– Henry Poincare

- Example : Painting

Proportion of colours Vs. their arrangements

An Example of Beauty of an Idea

- Question: What is the sum of all internal angles of a polygon?

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Beauty of an Idea

- Ideas talk back to us
When we fix one idea, it fixes some other ideas
- Beauty lies in creating simple ideas that
 - bring in unexpected implications
 - relate the seemingly unrelated things
 - illuminate and reveal much more than anticipated
- Beautiful ideas
 - explain more with less
 - are simple and general
- Total is greater than the sum of the parts

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

On the Role of Rigour in an Idea

- Rigour removes imprecision and adds concreteness
- Makes an idea immune to personal interpretation

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

On the Role of Rigour in an Idea

- Rigour removes imprecision and adds concreteness
- Makes an idea immune to personal interpretation
- Example: Divide 6 by 2

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

On the Role of Rigour in an Idea

- Rigour removes imprecision and adds concreteness
- Makes an idea immune to personal interpretation
- Example: Divide 6 by 2
“Divide 6 into 2 parts and tell me the size of each part”

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

On the Role of Rigour in an Idea

- Rigour removes imprecision and adds concreteness
- Makes an idea immune to personal interpretation
- Example: Divide 6 by 2
"Divide 6 into 2 parts and tell me the size of each part"
- Divide 6 by $\frac{1}{2}$
"Divide 6 into half part and tell me the size"

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

On the Role of Rigour in an Idea

- Rigour removes imprecision and adds concreteness
- Makes an idea immune to personal interpretation
- Example: Divide 6 by 2
"Divide 6 into 2 parts and tell me the size of each part"
- Divide 6 by $\frac{1}{2}$
"Divide 6 into half part and tell me the size"
- More rigorous explanations:
 - *"Divide 6 into parts of size 2 and tell me the number of parts"*
 - *"Divide 6 into parts of size $\frac{1}{2}$ and tell me the number of parts"*

The Process of Research

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- Research is a game of innovative ideas that are significant
- Research is often a cycle of:
*Speculate, design, apply/perform experiment,
observe, interpret, infer and repeat*

Repeat the following:

Notice, imagine, generate ideas, evaluate them (discard most, retain the promising ones)

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Generating Ideas

Heuristics

Seeking duality. Observing similarity in apparently unrelated things

Seeking symmetry. Observing balance or patterned self-similarity

Generalization. Removing specificities to cover more situations

Refinement. Distilling to essence by removing irrelevant parts

Extensions. Trying to stretch an idea in all possible directions

Adaptation. Using an idea in an unrelated context

Facilitators

Curiosity

Experimentation

Observation

Discussion

Slow Hunch

Serendipity

Error

Richard Hamming on
Research

Conclusions

Research and AI

Thinking Abilities Are Important

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- Research makes researcher a much better learner
- Teaching is not restricted to conveying information
Research is not restricted to solving a problem
- Teaching is a process of developing thinking
“Sustained argumentation: the ability to construct and maintain a complex argument across an extended piece of discourse, distinguishing claims from evidence, handling counterarguments, and reaching a defensible conclusion.”
Research is a process of honing it further
- Both can be casualties of AI

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Playing the Game of Thinking

Generating the ideas requires

- intuition, lateral thinking, observing patterns, creativity, and imagination
- guesses based on gut feeling and hunches, without any explicit rules
- need not be explainable

Validating the ideas requires

- critical thinking, deductive reasoning, rational thinking
- systematic chain of inferences using explicit rules
- must be explainable

Gen AI uses contextual thinking based on probabilistic pattern matching based on observations in the training data

Can provide

- significant help in generating ideas
- partial help in validating them

Can construct enumerative proofs

- Knuth's recent experience

Relies on plausibility

- Everything that is plausible, need not be correct

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Kanheman on Types of Thinking

- Two basic systems in our brain
 - Impulsive, effortless, and fast, almost automatic, association of observation and conclusion
 - Called “**System I**” by Daniel Kanheman
 - Similar to Gen AI except that the connections are coloured by emotions
 - Effortful, reasoned, and usually slow deduction of conclusions from observations
 - Called “**System II**” by Daniel Kanheman
 - Deliberate thinking (required for critical thinking)
- By default, our brain works like a predicting machine (System I)
- With practice in a domain, System II thinking is replaced by System I thinking

Thinking Out of the Box

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- Research requires you to think out of the box
- For that you need to know what the box is
- Gen AI explores the box extremely well
 - The breadth of the contents of the box
 - The connections between the contents of the boxBy remixing the contents at a scale and speed far beyond human capacity
- Research changes the shape of the box
- Great research occasionally destroys the box

Research and AI

Richard Hamming on
Research

Conclusions

Research is Gardening and Not Sculpting

- A sculptor begins with a complete plan and picture in mind
After planning, the main challenge is in correct execution
- Research involves active feedback by what is being built, leading to changing ideas and insights,
 - A gardener begins with seeds, soil, uncertainty, observation, pruning, adaptation,
 - The garden “talks back”
- Gen AI is at best an intelligent gardening assistant and never a gardner
 - It can suggest fertilizers, predict weather, identify diseases
 - It cannot decide what kind of garden is worth creating or how the best steps for reaching the final version of the garden

Research and AI

Richard Hamming on
Research

Conclusions

What Happens to a Researcher's Skills?

- Twin goals of research
 - Solve a problem, a riddle
 - Enhance a researcher's skills to do better research
- If we focus too much on the former
 - Researchers will outsource their thinking instead of using Gen AI as a tool
 - Like muscle atrophy, we will have brain atrophy
 - Do we want to lose thinking skill?
- We already see attention span decreasing
- Students submit essays and programs that they do not understand
They lose the ability to evaluate what Gen AI has given
- Where is the friction? There is no learning without friction.
Kites rise against the wind and not along with it.

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

What Happens to a Researcher's Skills?

- Twin goals of research
 - Solve a problem, a riddle
 - Enhance a researcher's skills to do better research
- If we focus on the first goal, we are using Gen AI as a tool
 - Researcher's skills are not enhanced
 - Like riding a bicycle, you must practice
 - Do we lose the ability to evaluate what Gen AI has given?
- We already have a thought experiment:
 - Suppose Einstein had Chatgpt
 - Would relativity have been discovered earlier? Possibly
 - Would Einstein have been Einstein?
- Students submit essays and programs that they do not understand
 - They lose the ability to evaluate what Gen AI has given
- Where is the friction? There is no learning without friction.
 - Kites rise against the wind and not along with it.

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Limitations of AI

- Converges on common patterns if prompted vaguely.
- Favors plausible over truly groundbreaking ideas.
It cannot know what is groundbreaking.
- Lacks lived experience and intuition.
- Misses emotional, cultural, or organizational nuances.
- Cannot build trust on which institutional cooperation rests
- Cannot give a sense of taste and style
- Cannot constitute goals

The most transformative innovations often arise from

- observations in the real world,
- deep expertise, and
- a willingness to pursue an idea despite little evidence

When Answers are Easy to Get, Questions Become More Important

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- A good question expands the field of awareness.
- It reframes the problem.
- Value is created not by declaring what is known, but by directing attention to what remains unresolved.
- Valuable answers today are not necessarily those that appear complete and articulate, but those that reveal where we must keep looking.

Source: <https://cacm.acm.org/opinion/as-answers-get-cheaper-questions-grow-dearer/>

Why Do We Need Care When We Use Gen AI?

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- We need to get invested in research and Gen AI may rob us of the investment of our mind.
 - When an answer feels good enough, we tend to stop asking.
 - Plausibility becomes a stand-in for truth.
 - Fluency and presentation become markers of confidence.
- Gen AI subtly persuades you that there is no need for further inquiry.
- Gen AI often complete our thoughts and reinforce existing narratives.
- Good answers are not necessarily those that appear complete and articulate, but those that reveal where we must keep looking.
- Good answers revise beliefs, not just confirm them.
Gen AI rarely challenges our beliefs.

How Should we Use Gen AI in Research?

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- We have to learn to use Gen AI as a tool
 - to discover information
 - to do low level tasks that need not count as useful skills
 - to complement our abilities and not replace our abilities
- We should retain the ability to accept or reject what Gen AI gives to us
- We should be careful about which skill can be considered irrelevant
 - Thinking skill should not become a casualty of Gen AI
 - The ability to think deeply and critically should not erode

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

How Should we Use Gen AI in Research?

You provide

- Context
- Goals
- Constraints
- Deep domain knowledge
- Judgment
- Taste
- Decision-making

Use AI for

- Breadth of coverage
- Speed of comparing and contrasting ideas
- Diverse perspectives
- Interesting Analogies
- Idea generation
- Rapid iteration for refining ideas

The value of Gen AI is not simply in producing answers
It is in helping people explore a much larger landscape of possibilities
Increases the surface area of luck

On the Role of Luck in Research

Pasteur: “Luck favours a prepared mind.”

Hamming: “Our society frowns on people who set out to do really good work. You’re not supposed to; luck is supposed to descend on you and you do great things by chance. Well, that’s a kind of dumb thing to say.

I spoke earlier about planting acorns so that oaks will grow. You can’t always know exactly where to be, but you can keep active in places where something might happen.

A prepared mind sooner or later finds something important and does it. So yes, it is luck. *The particular thing you do is luck, but that you do something is not.* ”

Luck is when preparation meets opportunity

Turning Difficulties into Opportunities in Research

Knowing right questions is the first step in knowing the answers

Hamming: “Often the great scientists, by turning the problem around a bit, changed a defect to an asset.

Hamming, you think the machines can do practically everything. Why can't you make them write programs?” What appeared at first to me as a defect forced me into automatic programming very early. What appears to be a fault, often, by a change of viewpoint, turns out to be one of the greatest assets you can have. ”

Doing research is a test in which you are allowed to write your own question paper and then answer it

IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- The physical time remains same but you are able to give deep attention with small conscious effort,
“Getting into the zone” or “Getting into the flow”
- Consolidation through hard work helps you to reduce your conscious effort

The Role of Consolidation through Hard Work in Research

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- The difference between ordinary and extraordinary is that little extra
- One needs
 - The initiative to find that extra
Must be smart and relevant extra, not arbitrary extra (use controlled imagination)
 - The patience and discipline to keep doing that extra again and again
- Initiative and discipline helps you get into the zone

On the Role of Intelligence and Courage in Research

Hamming: “How about having lots of ‘brains?’ It sounds good. . . . But great work is something else than mere brains.

One of the characteristics you see, and many people have it including great scientists, is that usually when they were young they had independent thoughts and had the courage to pursue them.

Once you get your courage up and believe that you can do important problems, then you can. If you think you can't, almost surely you are not going to. . . . That is the characteristic of great scientists; they have courage. They will go forward under incredible circumstances; they think and continue to think. ”

Uday Khedker

On the Role of Drive and Commitment in Research

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Hamming: “Well, one of the reasons is drive and commitment. The people who do great work with less ability but who are committed to it, get more done than those who have great skill and dabble in it, who work during the day and go home and do other things and come back and work the next day. They don't have the deep commitment that is apparently necessary for really first-class work.”

On the Role of Commitment and Creativity in Research

Uday Khedker
IIT Bombay

Talk Title:
Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

Hamming: “If you are deeply immersed and committed to a topic, day after day after day, your subconscious has nothing to do but work on your problem. And so you wake up one morning, or on some afternoon, and there's the answer. For those who don't get committed to their current problem, the subconscious goofs off on other things and doesn't produce the big result.

So . . . you don't let anything else get the center of your attention - you keep your thoughts on the problem. Keep your *subconscious starved so it has to work on your problem, so you can sleep peacefully and get the answer in the morning, free.* ”

On the Role of Uncertainty in Research

Richard Hamming on
Research

Conclusions

Hamming: “Most people like to believe something is or is not true. Great scientists tolerate ambiguity very well. They believe the theory enough to go ahead; they doubt it enough to notice the errors and faults so they can step forward and create the new replacement theory. If you believe too much you’ll never notice the flaws; if you doubt too much you won’t get started. It requires a lovely balance. But most great scientists are well aware of why their theories are true and they are also well aware of some slight misfits which don’t quite fit and they don’t forget it. ”

Research

Conclusions

Richard Feynman: "It is our responsibility as scientists, knowing the great progress and the great value of a satisfactory philosophy of ignorance, the great progress that is the fruit of freedom of thought, to proclaim the value of this freedom, to teach how doubt is not be feared but welcomed and discussed, and to demand this freedom as our duty to all coming generations. "

Three Requirements of Creativity

Research in the Era

What is Research?

Research and AI

Richard Hamming on
Research

Conclusions

- Deep knowledge
 - Keep your antennas tuned
 - You never know when and where the signals come from
- Holding a problem in the background thinking for a long time without acting on it
- Dealing with loosely structured ideas and structuring them over time

Incremental Research Vs. Fundamental Research

Richard Hamming on
Research

Conclusions

Hamming: “Most great scientists know many important problems. They have something between 10 and 20 important problems for which they are looking for an attack. And when they see a new idea come up, one hears them say ‘Well that bears on this problem.’”

The great scientists, when an opportunity opens up, get after it and they pursue it. They drop all other things. They get rid of other things and they get after an idea because they had already thought the thing through. Their minds are prepared; they see the opportunity and they go after it. ”
