

Project Diary - Pranay Nahar

STAGE II

27 October '14

Met in the mess with the entire team after a long time. Discussed how to go forward with our project, various parts I needed to distribute as leader, also discussed about various functions.

2 November '14

Read up about SQL, and then discussed and decided to use SQL instead of file handling for the database, due to it's obvious advantages over files.

I Began the coding of functional part of code.

5 November '14

Endsems exams were approaching and this was our last meet before that we all agreed upon individual roles in the project. And then dispersed shortly after discussing the graphics part.

16 November '14.

Scheduled first meet after endsemester exam. Gave various function to code to team members, discussed deadlines and then went to work on my own part of inserting movies, signing up etc..

20 November '14

Met in the mess with everyone to add Search query from SQL to build search_by_movies function to the code. Later, after meet, refined the codes and tried debugging.

22 November '14

Graphics was posing a problem, we decided to not go for flashy graphics and instead focus on our code. Simplecpp was agreed upon.

23 November '14

Graphics was ditched, as we realised our code didn't really need to work with graphics for efficient use.

Talked about adding review rating functions, and favorite a movie.

24 November '14

I completed the review and rating functions with bugs. which we later removed. Final run through of project to maintain continuity, and add feature to go back in the program in any point of the process.

Short discussion abt documentation.

Peer and self review discussion.
