

## project diary

Name:Sindhura

Roll number:140050051

1) Date:20/10/2014

Time:30 minutes

Work: This is a team meeting. We discussed on which graphics to be included in our project. Finally it is decided to use simplecpp because we didn't know much about graphics and as it is given in homepage about simplecpp we thought it would be easier for us to learn and use simplecpp and also because our project just needs simple graphics.

2) Date:24/10/2014

Time:1 hour

Work: I studied about graphics. We can use `graphic.h` or `sfml` or `simplecpp`. I thought `sfml` would be better as in that I can easily include time feature and highscore features. I also discussed with TA and teammates. Finally I decided to go with simple cpp.

3) Date:27/10/2014

Time:1 hour

Work: This is a team meeting. This is our first meeting after diwali vacations. As I wanted to include time feature in our game. I studied about different libraries that would be useful to include this feature. I did not know which library to use. I searched in the net about which function to be used and which library would contain the functions useful to include this feature in our project.

4) Date:31/10/2014

Time:1 hour 30 minutes

Work: This is a team meeting. Finally I came up with `time.h`. I thought this is the best to use in our project. There were several functions in this library. All these functions were correlated and a bit confusing. So it took me time to figure out these functions. I took help of TA and I also pinged few seniors whom I thought can help me.

5) Date:5/11/14

Time:1 hour 30 minutes

Work: This is a team meeting. I almost figured out code which can include time feature in our project. Hemanth's had some trouble in using backtracking in his project. I helped him a bit. We finally came up with a code but we were not able to compile it.

6) Date:8/11/2014

Time:1.5 hour

Work: This is a team meeting. We were all debugging that code and were still not able to run the program. We worked on it for a while and finally figured out that a for loop was missing and we included it and could run our program well. As we had cs quiz tomorrow we also clarified each other doubts and it did really help me a lot.

7) Date:15/10/14

Time:1 hour 30 minutes

Work:This is a team meeting.All these days we were busy with our endsems and could not meet or work on our project.We are done with our code which is running well but we still did not include any graphics.The code which I figured out for time feature was working well individually but when included in the actual code it was not running.I finally debugged it and our code is ready with this feature included

8) Date:18/11/2014

Time:2 hours 30 minutes

Work:This is a team meeting.We were trying to include graphics using simplecpp in our code.We did came up with a code after working for a long time but it did not run well.We also discussed with our TA but still couldnt run it.

9) Date:22/11/2014

Time:3 hours

Work:This is a team meeting.we were debugging the code .We had several issues I also had issues running simplecpp with codeblocks.After working for a long time we finally succeeded in building a code which was running well.Now we wanted to improvise it and so included two modes classic mode and challenge mode and started working on it.

10)Date:23/11/2014

Time:2 hours

Work:This is a team meeting.We improvised it and also included those modes.We completed our project and finalised it.We also started working on user manual and srs document.

11)Date:24/11/2014

Time:2 hours

Work:We finally checked our code.Completed writing user manual and srs document and rechecked and dicussed everything.

Total Time : 18 hours
