# Outline

- Problem Definition
- Related Work
- Proposed Idea
- Design
- Plan of Implementation
- Conclusions and Future Work
- References
- Appendix

# Problem Definition

- Static Toolbar
  - Limitations of Static Toolbars
  - Reconfigurable Toolbar
    - A Toolbar which provides facilities for the user to customize in a convenient manner to use.
  - Mozilla Reconfigurable Toolbar

## Related Work

### News Aggregators

Tools which download the latest news that interests you, and displays them in a quick and easy to use webpage.

**Sage, ATOM** etc. are examples of News Aggregators.

### Score Updates

Tool which gets live scores.

**RSS Score Card** is an example.

## Related Work

### News Aggregators

Tools which downloads the latest news that interests you, and displays them in a quick and easy to use webpage.

**Sage, ATOM** etc. are examples of News Aggregators.

### Score Updates

Tool which gets live scores.

**RSS Score Card** is an example.

## Proposed Idea

To Provide a *Split Toolbar* which dynamically shows data from different sites in a scrolling fashion.

To Provide an option for dynamically:

- Adding new channels e.g., News Channel, Sports Channel etc
- Deleting already existing channels
- Adding new domains or sites
- Deleting already existing domains or sites

## Proposed Idea

To Provide a *Split Toolbar* which dynamically shows data from different sites in a scrolling fashion.

To Provide an option for dynamically:

- Adding new channels e.g., News Channel, Sports Channel etc
- Deleting already existing channels
- Adding new domains or sites
- Deleting already existing domains or sites

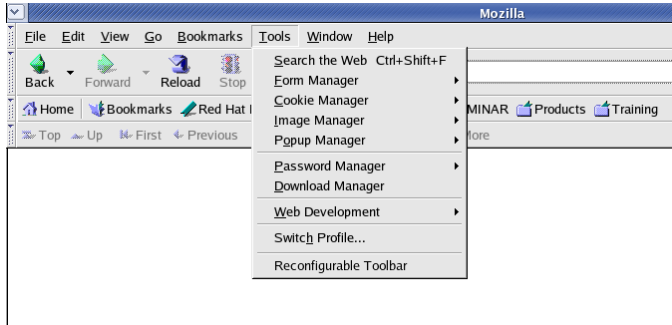

# Constituents of a S/W design document

The S/W Design Document is a comprehensive software design model consisting of:

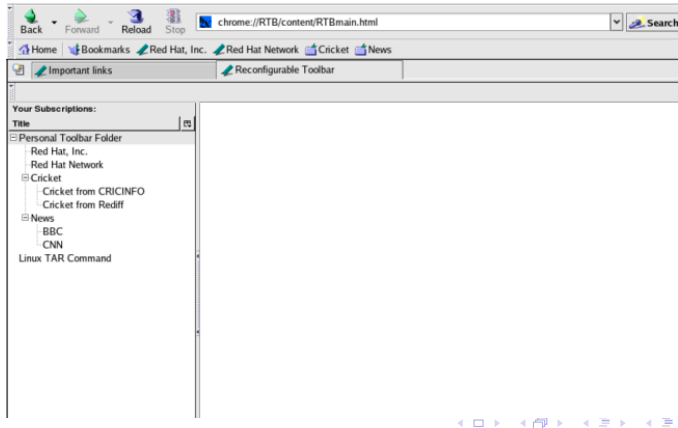

- Data Design
- Architecture Design
  - Data Flow Diagrams
  - Program Structure
- Interface Design
  - Human Interface Design

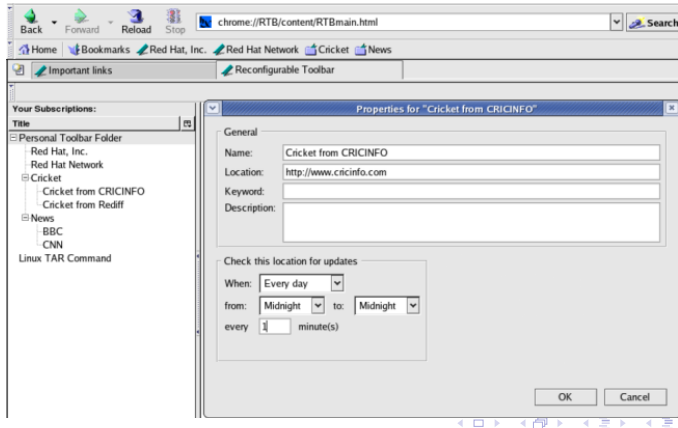

# Human Interface Design

# Human Interface Design

# Human Interface Design

# Data Design

- The **data design** specifies how the data of the program is going to be stored including all major *data structures*.
- The **Schemas** of the 2 data structures used in the Project are as follows:
  - RSS-DB data strcuture's schema

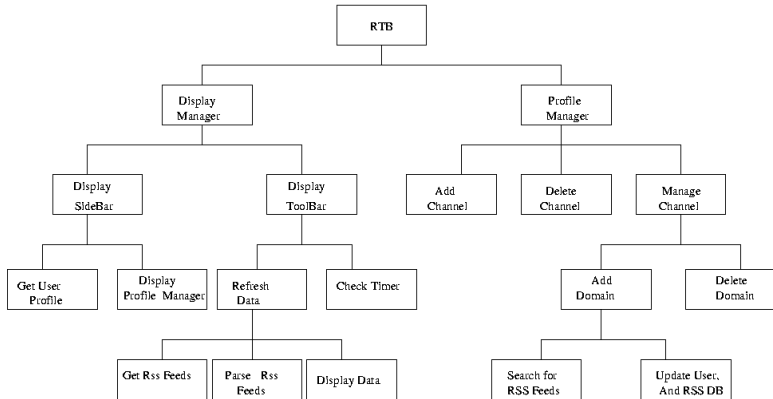

ID	NAME	KEYWORD	RSS_URL
----	------	---------	---------

- User-Profile-DB data structure's schema

ID	CHANNEL	VISIBLE
----	---------	---------

# Program Structure

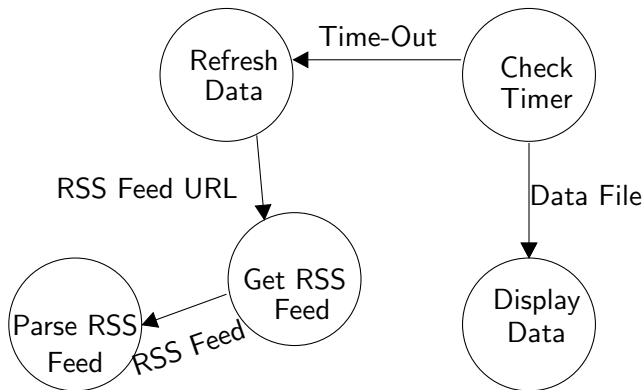

## DFD 0

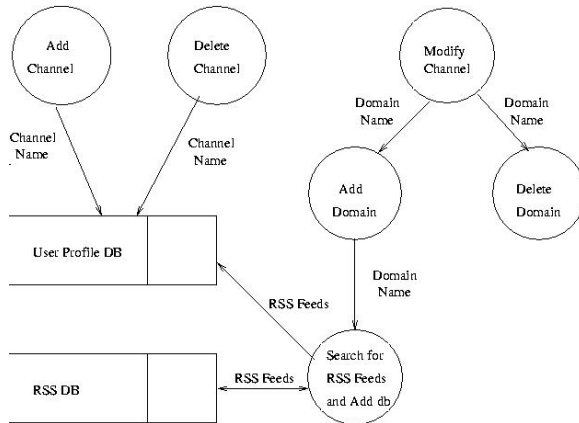

# DFD 1

## DFD 2.1

## DFD 2.3

# Plan of Implementation

**Scripting Languages** to be used toward implementation:

- 1 Mozilla **X**ML **U**ser Interface **L**anguage (**XUL**)
- 2 Java Script

## Justification

**XUL** was designed for creating the user interface of the Mozilla application. A feature in XUL called an *overlay* allows a third party to create extensions to the browser itself, for example to add a *custom toolbar*, change menus, or add other features.

# Plan of Implementation

*Concepts* to be known toward implementation:

## Really Simple Syndication - RSS

RSS is a mechanism used to distribute news content without depending on the browser or email client.

### Types of sites that are typically RSS-Enabled

- News services
- Databases
- Many web logs (commonly called "blogs")

# Plan of Implementation

*Concepts* to be known toward implementation:

## Really Simple Syndication - RSS

RSS is a mechanism used to distribute news content without depending on the browser or email client.

## Types of sites that are typically RSS-Enabled

- News services
- Databases
- Many web logs (commonly called "blogs")

# Conclusions and Future Work

## Conclusions

- Static Toolbars have some limitations
- Reconfigurable Toolbars overcomes the limitations of Static Toolbars and provides the user with the facility of customizing the Toolbars
- We developed the *Design* of a Reconfigurable Toolbar for Mozilla

## Future Work

- Have to make the Mozilla Reconfigurable Toolbar a reality by coding it according to the design developed
- Have to make the system robust by finding the flaws if any after implementation and by correcting them
