file descriptors & dup, dup2, pipe

fork()

What happens to fds after exec()?

```
exec("cat host.txt");
(int)fd = open("in.txt", "r");
```

dup, dup2

```
newfd = dup(fd)
```

```
dup2(fd1, fd2)
```

duplicate file descriptors to point to the same file (file table object)

when fds up & one already active

# scheduler & scheduling policies.

cpu time line

# # scheduler & scheduling policy.

cpu timeline.
