↑

Thesis focus
**streaks and blur
due to motion**

Thesis Goal---

- **Develop intelligent algorithms that will compensate for human related errors.**

How?

- Can I model the unwanted motion artifacts?
- Can I use some implicit redundant information?
- Can I instruct machine to take measurements with better protocols?

Thesis Goal---

- **Develop intelligent algorithms that will compensate for human related errors.**

How?

- Can I model the unwanted motion artifacts?
- Can I use some implicit redundant information?
- Can I instruct machine to take measurements with better protocols?

Without compromising much on radiation exposure and speed.

Thesis Goal---

- Develop intelligent algorithms that will compensate for human related errors.

How?

- Can I model the unwanted motion artifacts?
- Can I use some implicit redundant information?
- Can I instruct machine to take measurements with better protocols?

Without compromising much on radiation exposure and speed.

Techniques used:

Compressive sensing, optimization, image and signal processing.
