Computer Graphics @ CS-IITB

Frame Rate: 56.59
ThreadingModel: SingleThreaded
Event: 0.02
Update: 7.12
Cull: 0.15
Draw: 7.58
GPU:

Computer Vision @ CS-IITB

View Point 1

View Point 1

(a) Input: Feature Point Correspondence

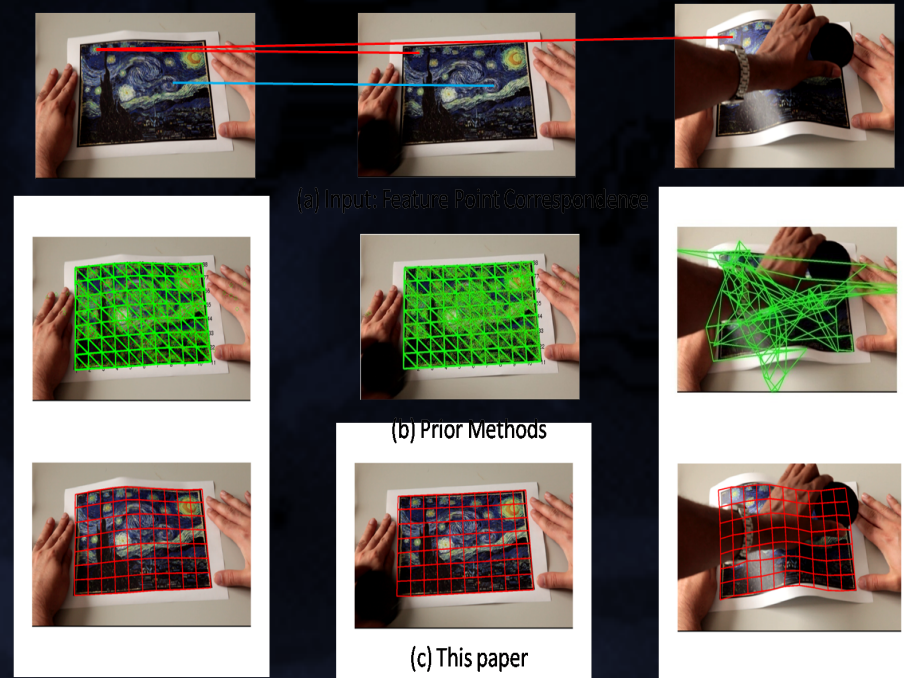

(b) Prior Methods

(c) This paper

2010/6/26

Computer Vision @ CS-IITB

- Reconstruction of deformable surfaces from video.
- Above results are from a BTP and a prior MTP – 1 paper published this year.

Computer Vision @ CS-IITB

- Segmentation for Cancer prognosis.
- PhD thesis results– 1 paper published last year.
- Continuing PhD.

Computer Vision @ CS-IITB

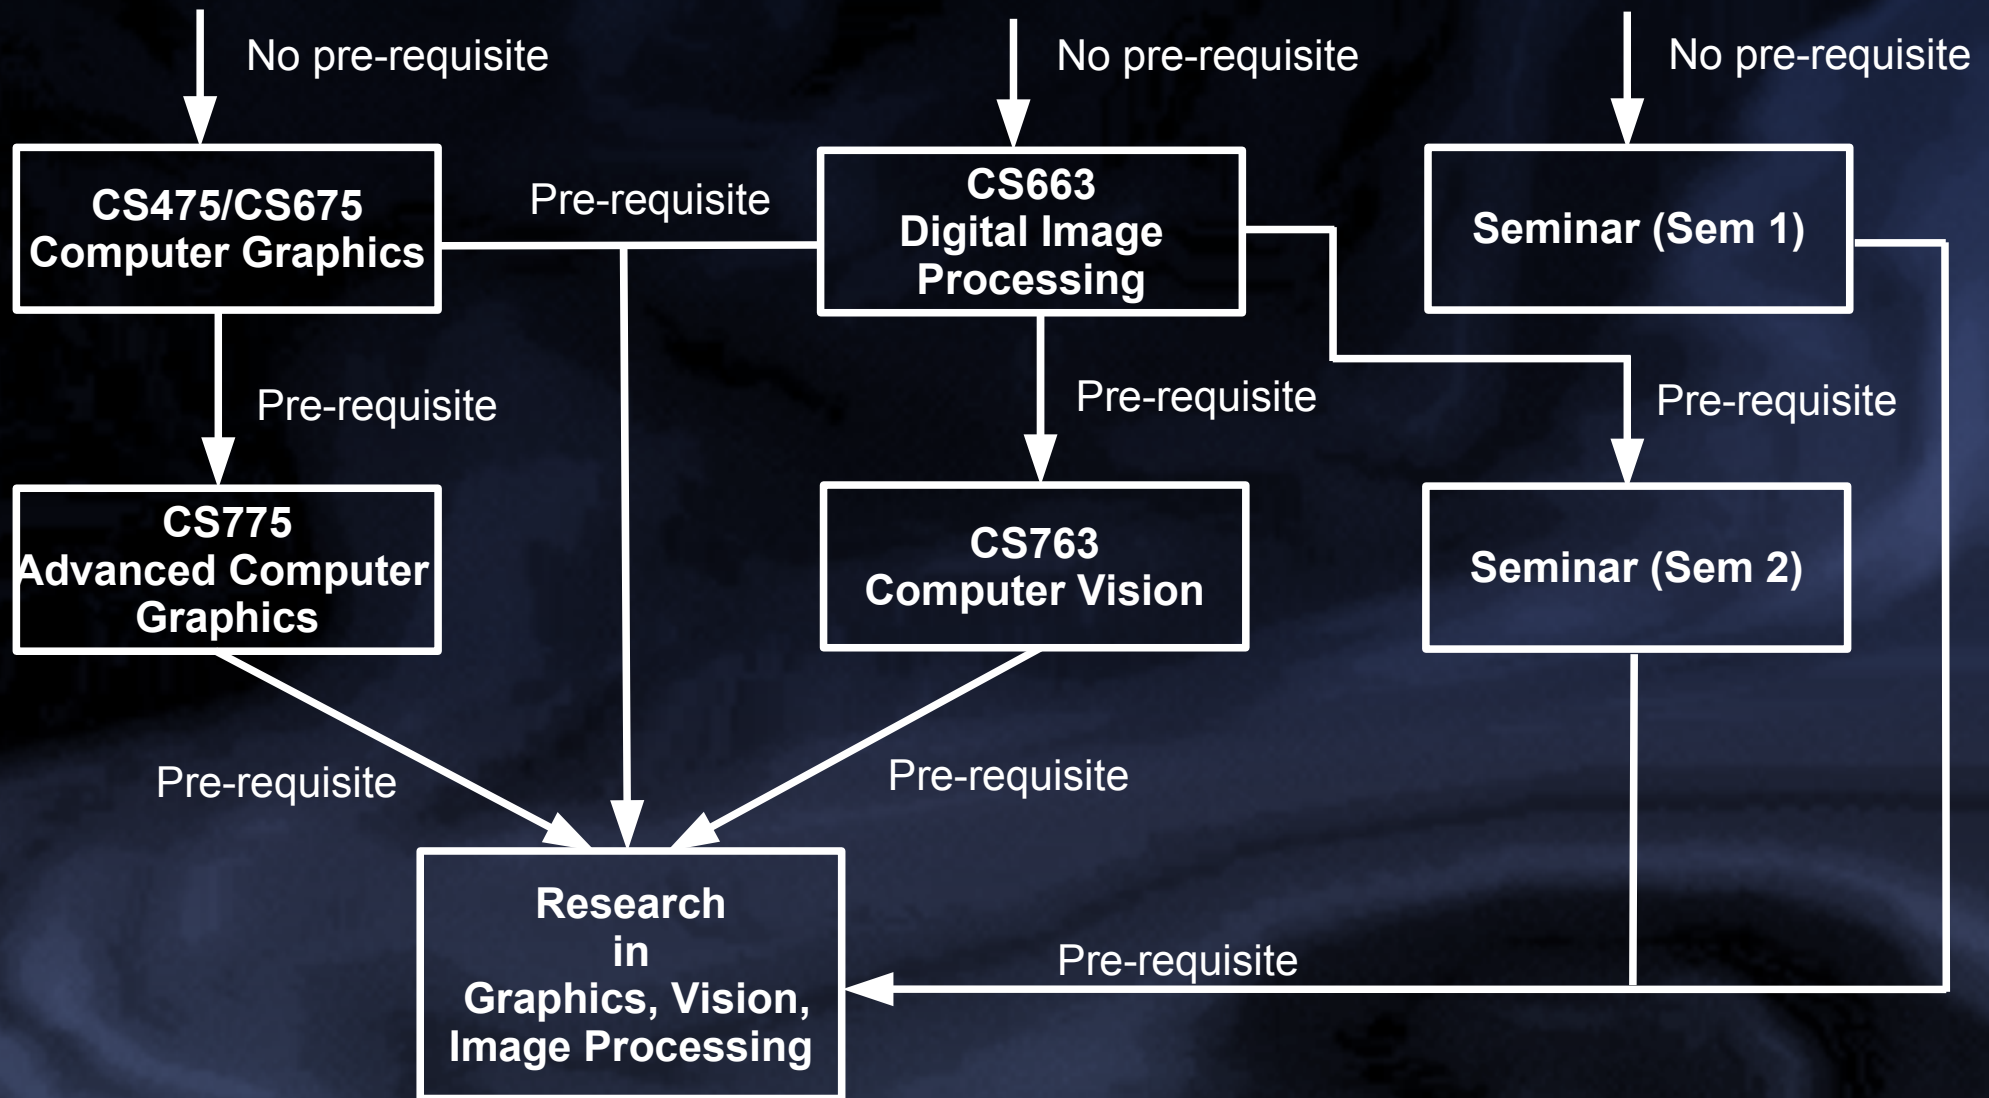

- Projector-Camera Systems – Projecting in dual planar environments.
- PhD thesis results – 1 paper published this year.
- Continuing PhD.

Course Basket

- Courses This Semester
 - Computer Graphics (CS 675)
 - Digital Image Processing (CS 663)
- Next Semester
 - Advanced Computer Graphics (CS 775)
 - Computer Vision (CS 763)
- Allied Courses
 - Machine Learning, Computer Aided Geometric Design, Optimization, Data Mining, Probability&Linear Algebra
 - R&D Project, Seminar
- Don't Hesitate to Take UG courses

Work with us

Seminar & Research

- Current View of M.Tech Students: Help in bringing into focus the research capabilities
 - Good idea to choose to work with me earlier, rather than later
 - Demand that research be fun
- Essential to take the seminar with me ideally this semester
- You can opt out of a M.Tech Project; however the default is that you will be opting in

Working Together

- Building a fruitful working relationship takes time and mutual respect
 - Different from being friends
 - Different from being a course instructor
- Building a research idea into fructification takes a lot of time
 - Necessary but not sufficient

Practical Realities

- Key problem: Limited resources
- Probability of multiple students wanting to work with the same professor is high
- Vice versa
- Possible Solutions:
 - Take the seminar in the first semester
 - 3 Year RA

Topics and Number

- Anything in Graphics and Vision
 - From photographs to 3D
 - Light Transport in Computational Photography
 - Histopathology imaging based Cancer detection
- Success stories from ML in Comp Vision
- GPU computing (with Prof. Aluru)
- Link on dept wiki
- Number of students:
 - ∞ (if first semester),
 - 0 if second semester (you need to convince me)
