Society and Households

Basic Unit: The Individual or the Household.

- Households: groups of individuals who are biologically interrelated and/or who depend on each other for emotional and biological needs. The first collective unit.
- Adequate for most situations but not always, e.g., the role and conditions of women or girls
- Proximate causes of these may emanate from outside the household, e.g., these may be cultural, economic or historic.
Needs

The development agenda then is to find social structures and practices which best suit the interests and needs of the households.

- **environmental needs**: food, water, shelter, and energy to cook food, for lighting and warmth and so on.

- **cultural needs**: relationship with other households and with nature. Needs for identity, dignity, community, intimacy and conviviality, coping with grief, narrative and meaning.
  - life would be boring
  - life would be impossible: record, organize, transmit and reward knowledge.

- **land etc. are auxiliary**. For example, food ⇒ need for land and for irrigation or for forests to hunt, and so on. *sadak* and *bijli*, or education or a ration shop.
Households interact with each other and assume specific roles.

Every interaction has a production and a consumption of value, i.e., a transfer of a process of creation or value-addition.

The interaction needs assets, which may be material or non-material, personal or common. These are crucial.

Typically in non-despotic societies or those with comprehension, every interaction is indeed enmeshed in a return loop.
Agents and Roles

- **Agents**: collection of households, thematically related. Need not be geographically or biologically related.
  - related by assets, knowledge, ownership, position, charter.
- **Examples**: Cultivators, Singers, *krishi sahayaks*, temple priests, shop-keepers, low-caste landless, ancillary industrialists.
- **Society**: Panoply of arrangements between agents to provide for basic needs of the households
  - well-being of different agents in a society may be very different.
- Thus, we may say that when agricultural prices fall labourers are better off, but cultivators are worse off and so are artisans.
- **Roles**: Their place in the web of society, their interaction with other agents.
Transactions

Transactions. Their give-and-take. For example economic transactions involve commodities and money, temple priest does puja and accepts dakshina, gets grants from village and maintains temple.

Transactions may be an exchange of many types of "goods": votes, appreciation, name, fame, money, cultural artefacts, commodities, security, water, food, service, transport.

Social Practices

- Social Practice: connected combination of agents and enterprises, processes and mechanisms.
- Connected combination of agents: social practice
  - Simple: shoe-maker, Complex: Public transport system
- Enterprise: Composite agent based on employees.
- Good or bad outcomes are results of:
  - poor design of social structures and practices
  - poor functioning of these structures.

Agent Network Diagram
- Representation to analyse efficiency, sustainability and equity.
Division of labour: Different agents do a few activities in a social context, in return for wages or rewards.

Possible because of (i) very specialized tools and or (ii) mobility assets such as roads and bridges and (iii) institutions such as rules of exchange, (iv) enforcement of contracts, (v) law and order (vi) private property

Based on ease of repetition, cheaper, faster, better, dedicated infrastructure.

Castes and watan. Guilds and the charter. The modern open professional or trade education based on certification.
Knowledge and Practice

Basis of classifying agents.

- **The Artisan.** Precursor to the professional. Guildsman, if charter exists. Transmission of knowledge through house-holds or through guilds. *Factories* of medieval times.

- **The Enterprise.** A composite agent, i.e., activities and delivery of value. Division of labour as the basis.

- **The Employee.** Job description in a larger enterprise.

- **Tradesman.** Performance of pre-set activities. May or may not have his/her own tools. Specialized training in ITIs and trade schools. Certification. Adapts to changing scenarios.

- **The Informal Worker.** No set activities. No training. Based on general skills and access to privileges.
Structure of Society

Classification of social structures broadly, on (i) the types of transaction and (ii) complex collectives of agents.

Figure: The basic structure of society
Exercise. Identify a service or a product which is now provided by the market but which was earlier provided by civil society. Analyse the chronology and try and explain what may have happened?

Exercise. The word exploitation, e.g., of lower castes or economically weak members of society, is used frequently by social scientists. Analyse such a situation in terms of the value created by agents and the value received. Why has such a situation arisen?

Exercise. Suppose that you were hired to improve the hostel-mess service. Go through the development professional loop and make a brief analysis of the issues involved and the activities. Try this out for IIT admissions process.

Exercise: Draw the agent network diagram for an anganwadi and for a taluka bus depot.
Thanks
