CS 715: The Design and Implementation of Gnu Compiler Generation Framework

Uday Khedker

GCC Resource Center,
Department of Computer Science and Engineering,
Indian Institute of Technology, Bombay

January 2011

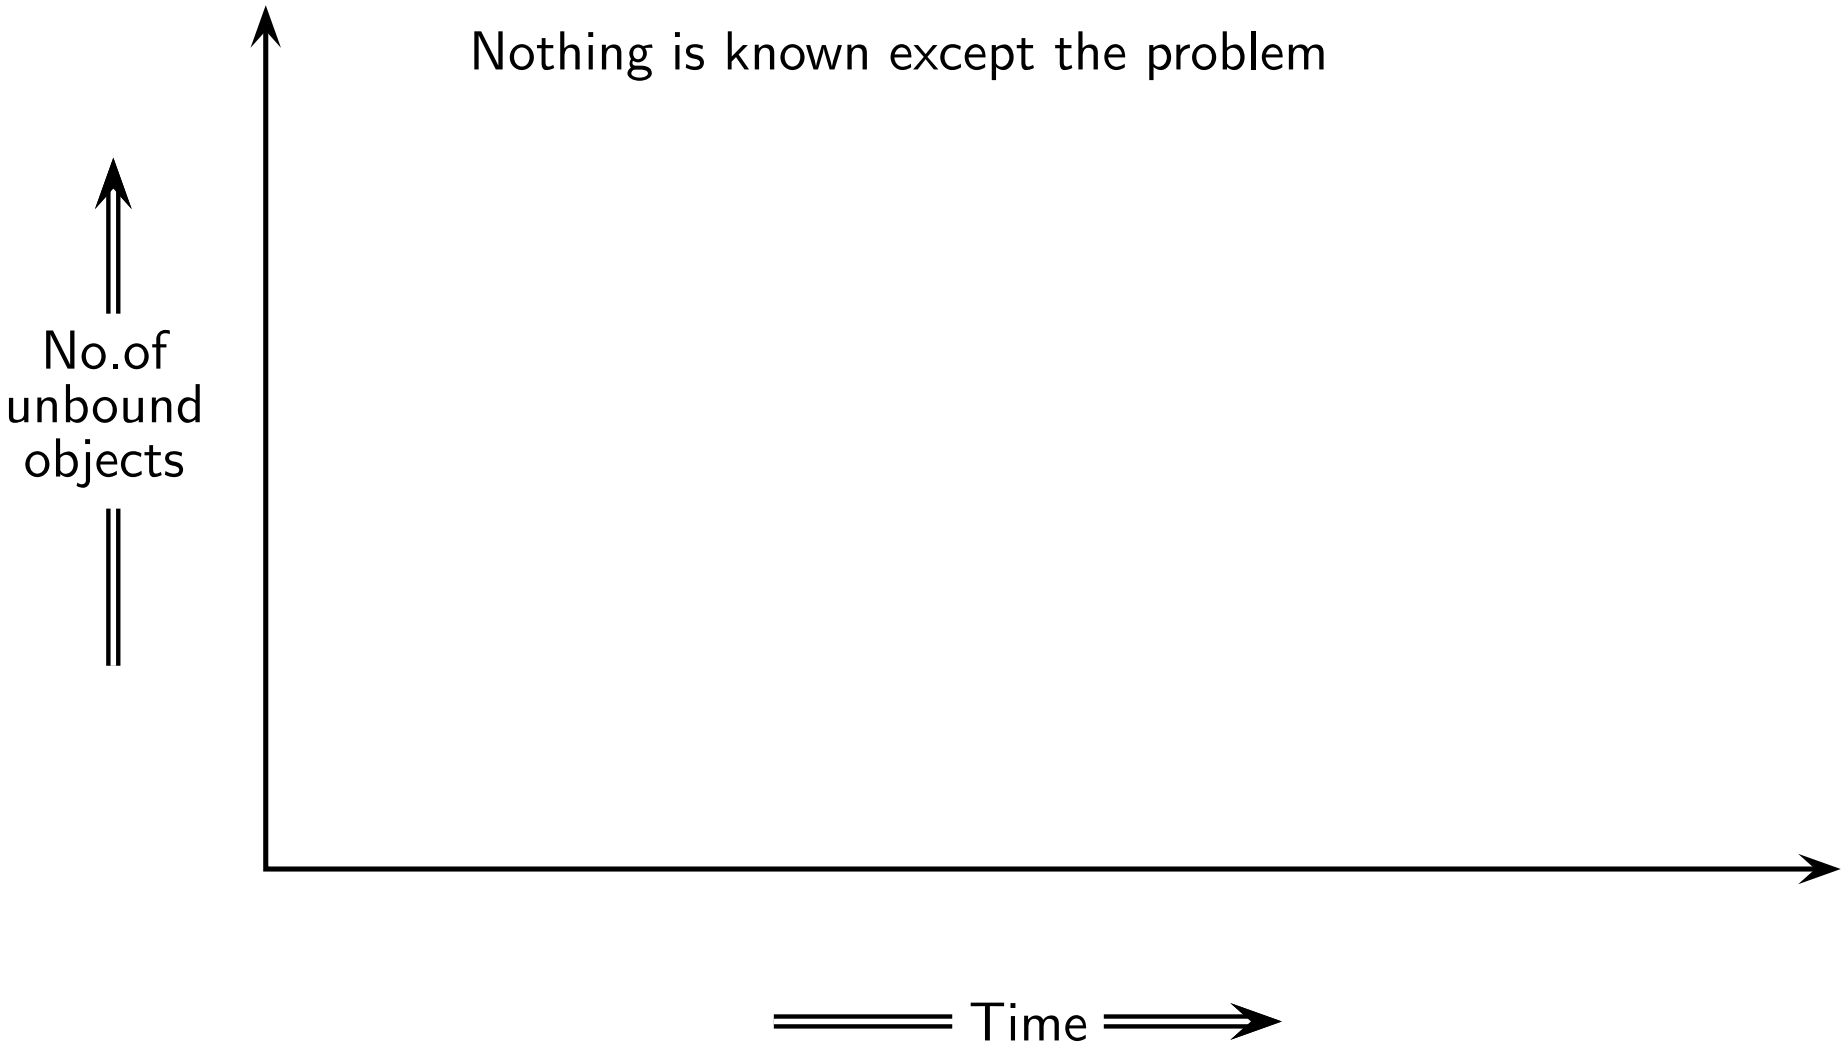
Outline

- An Overview of Compilation
  Introduction, compilation sequence, compilation models
- GCC: The Great Compiler Challenge
  Difficulties in understanding GCC
- Meeting the GCC Challenge: CS 715
  The course plan

Part 1

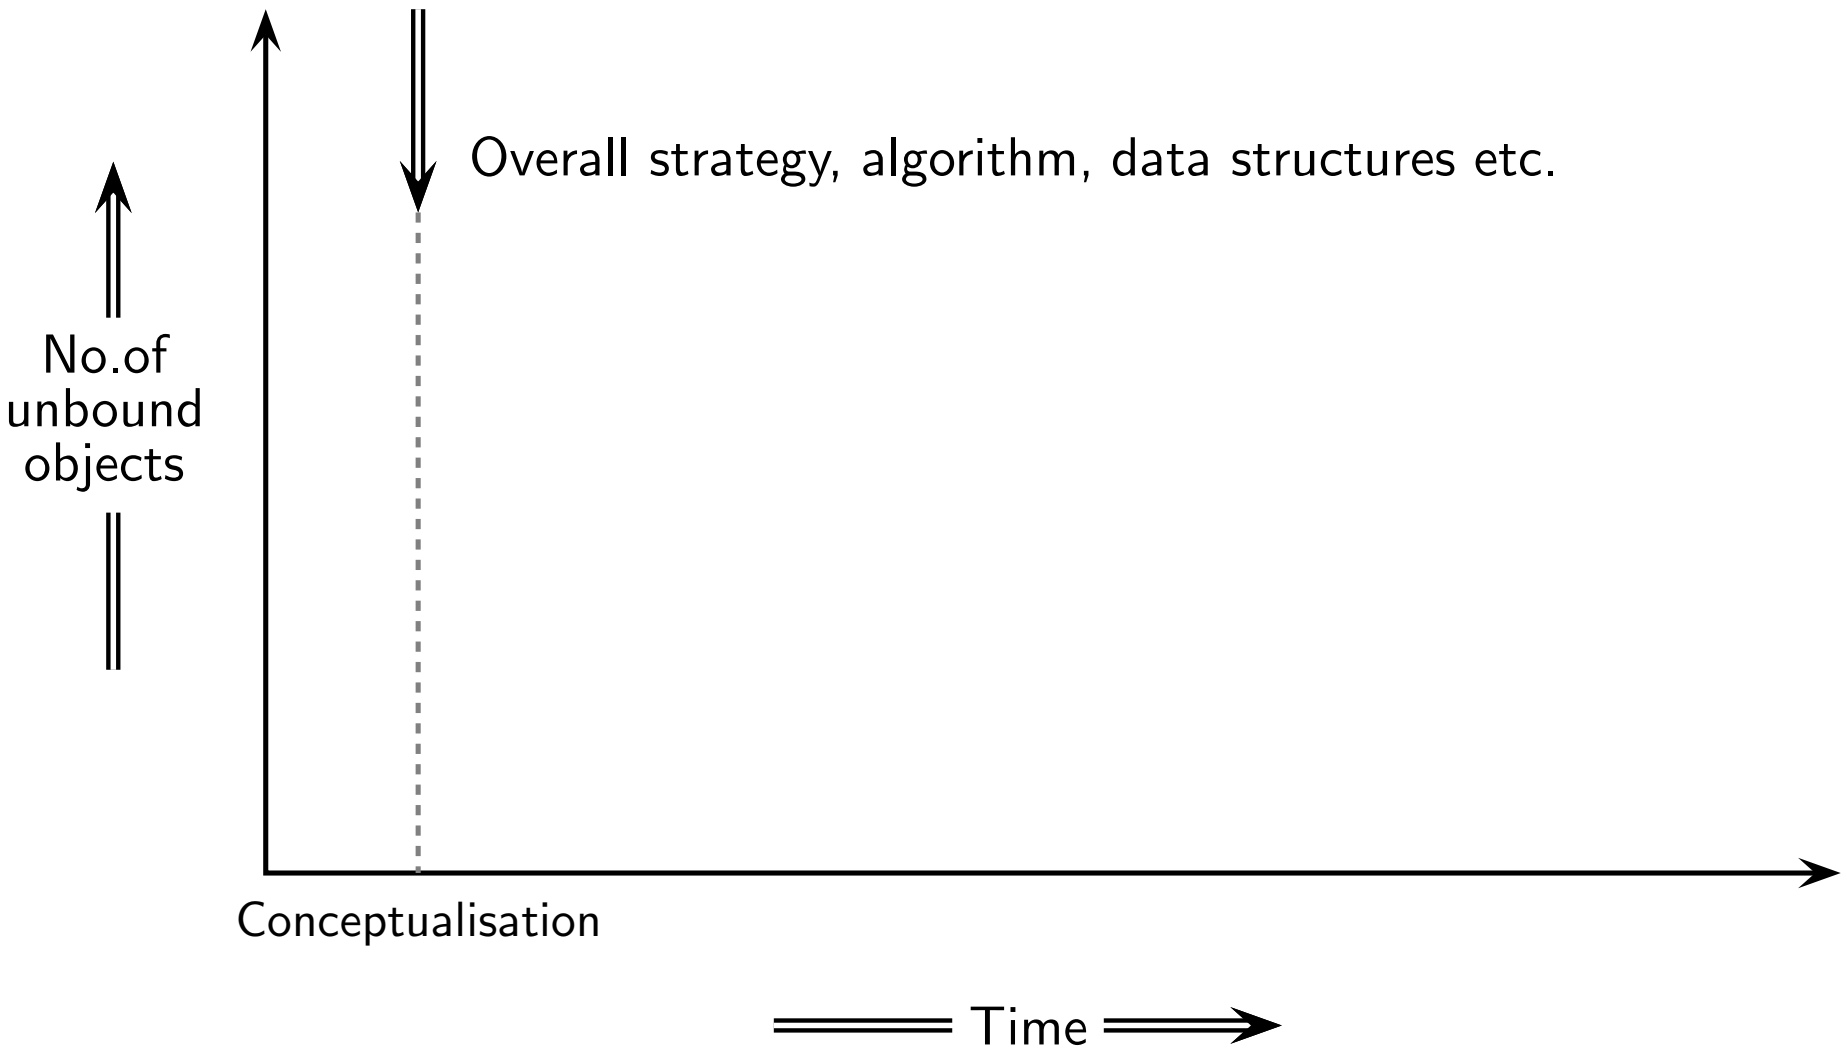
Introduction to Compilation

Binding



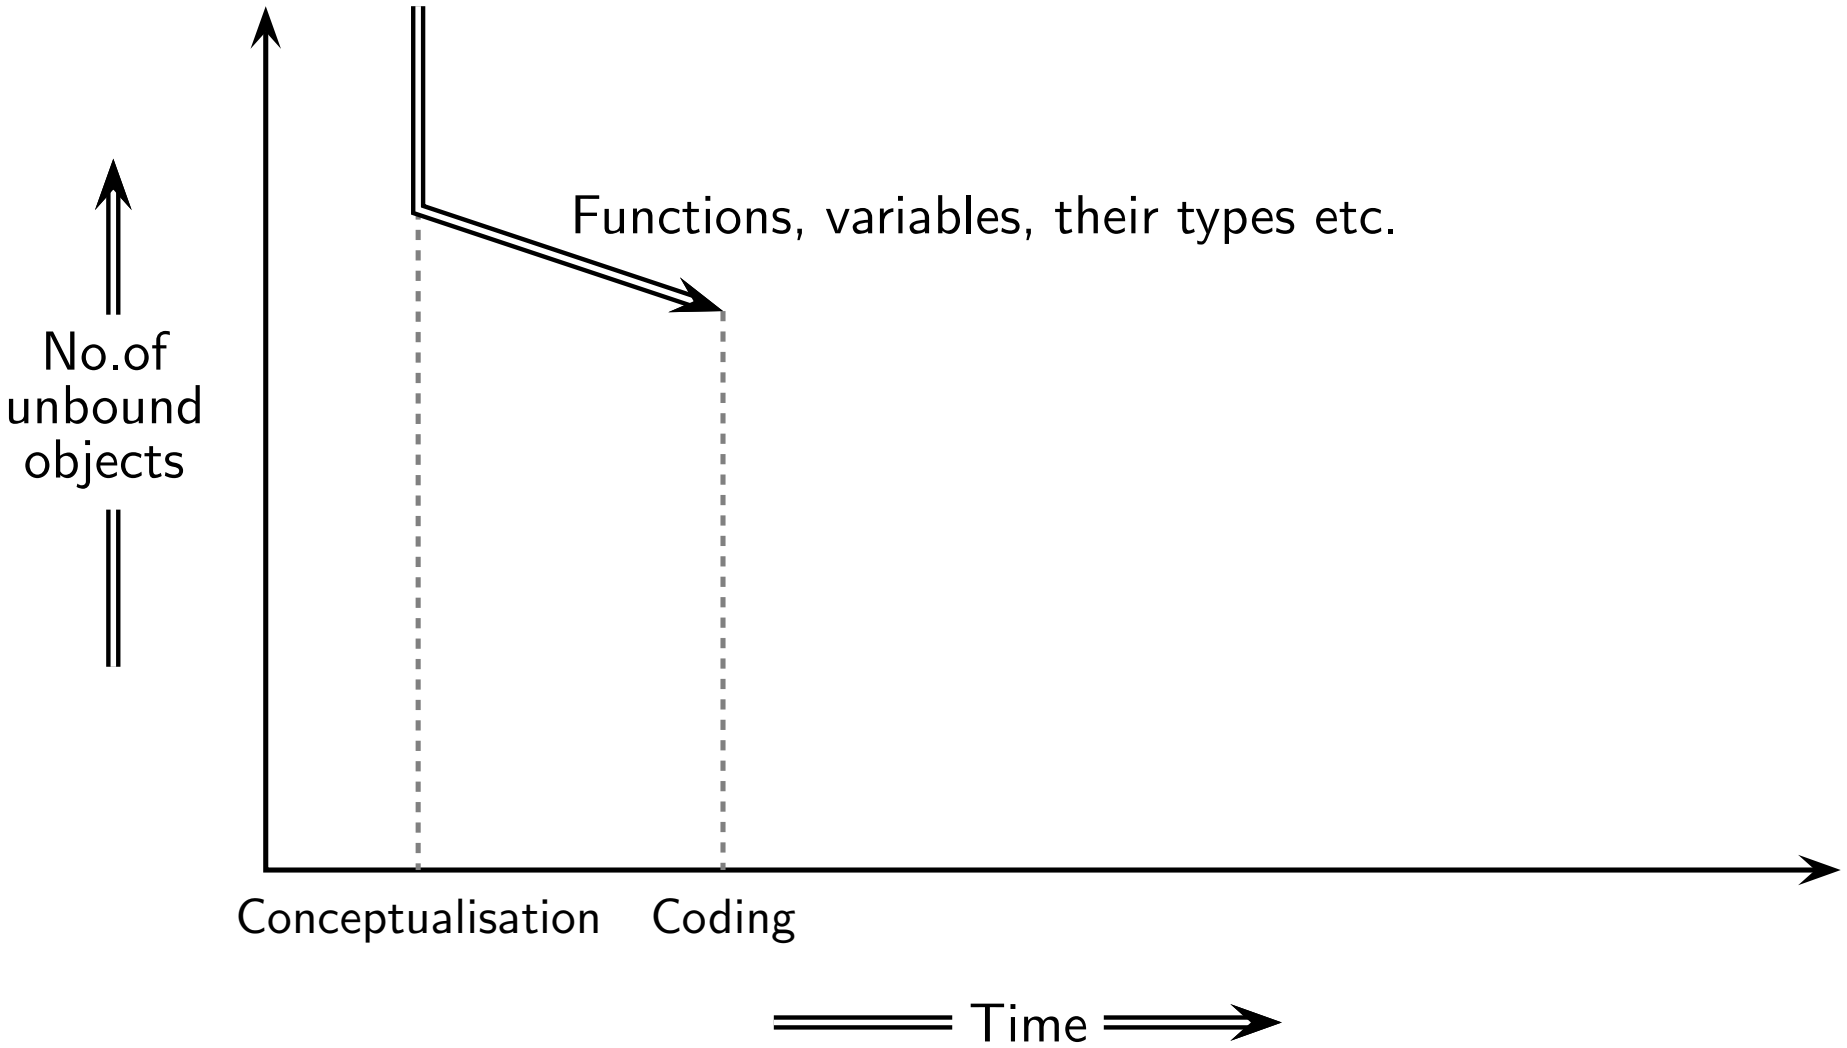
Nothing is known except the problem
No.of unbound objects
Time

Binding



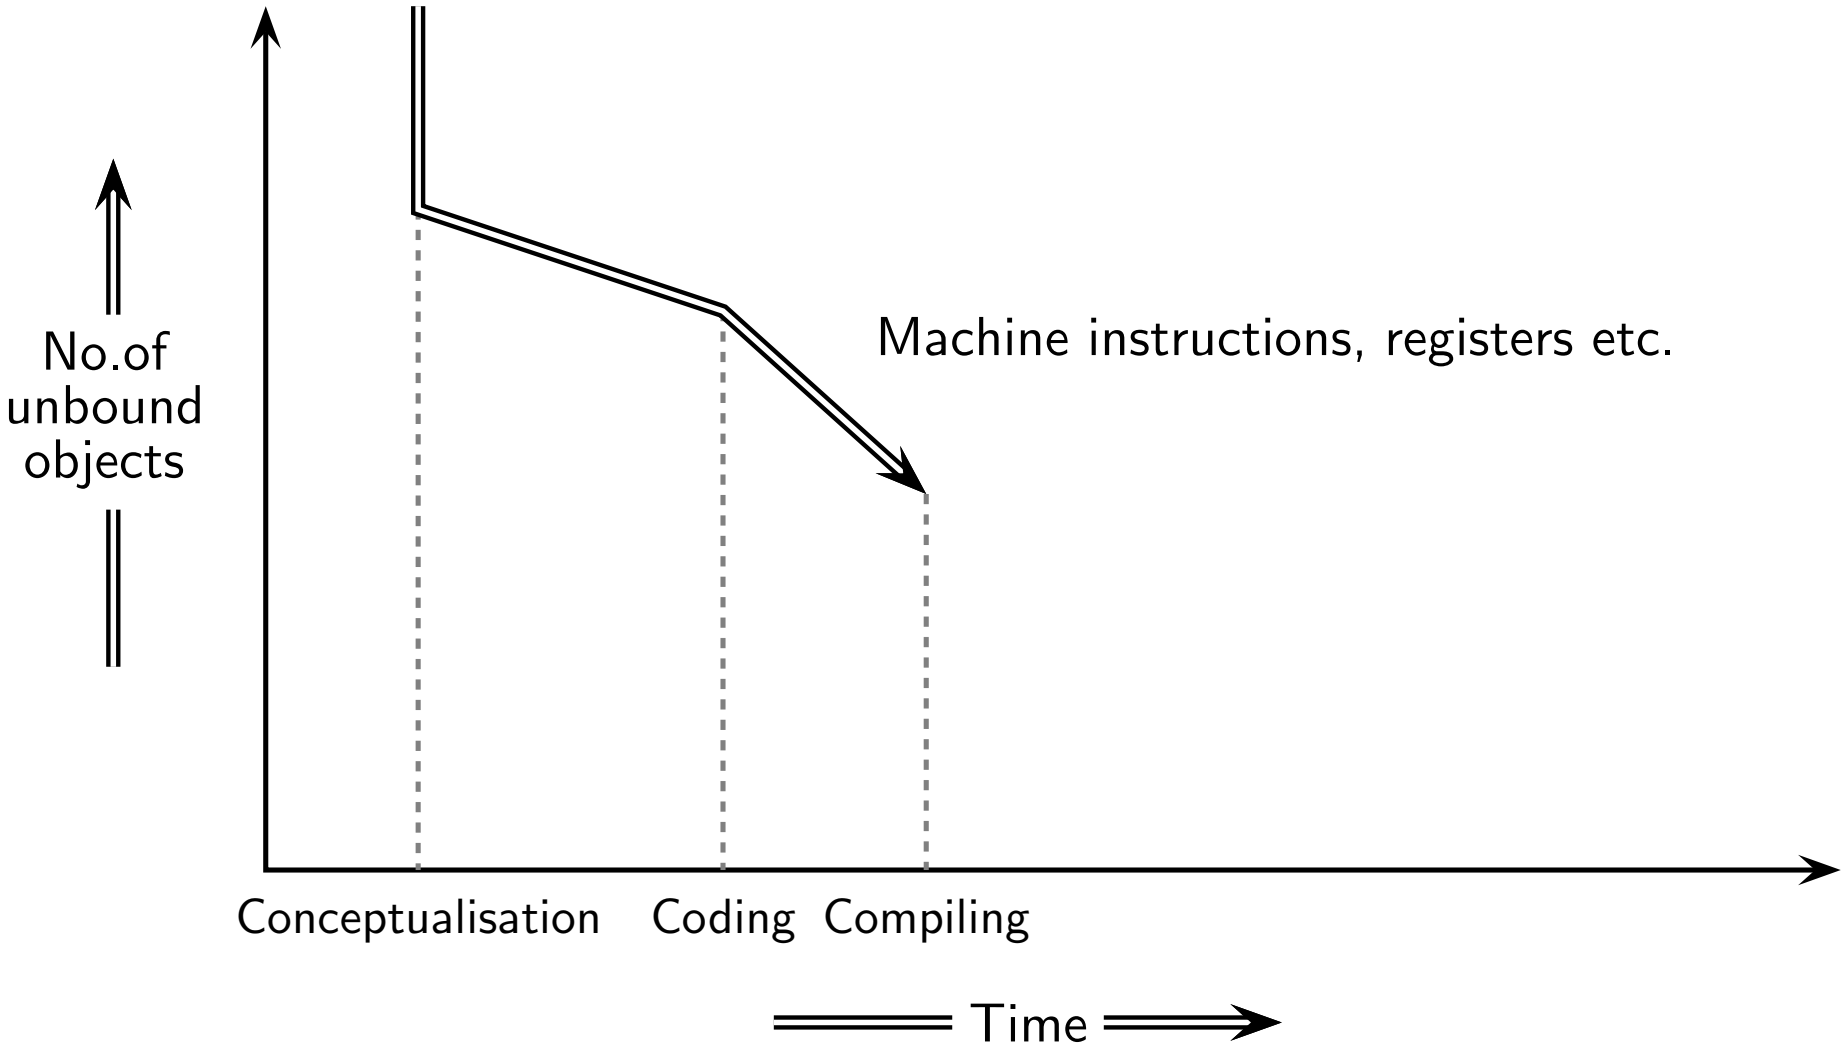
Overall strategy, algorithm, data structures etc.
No.of unbound objects
Conceptualisation
Time

Binding



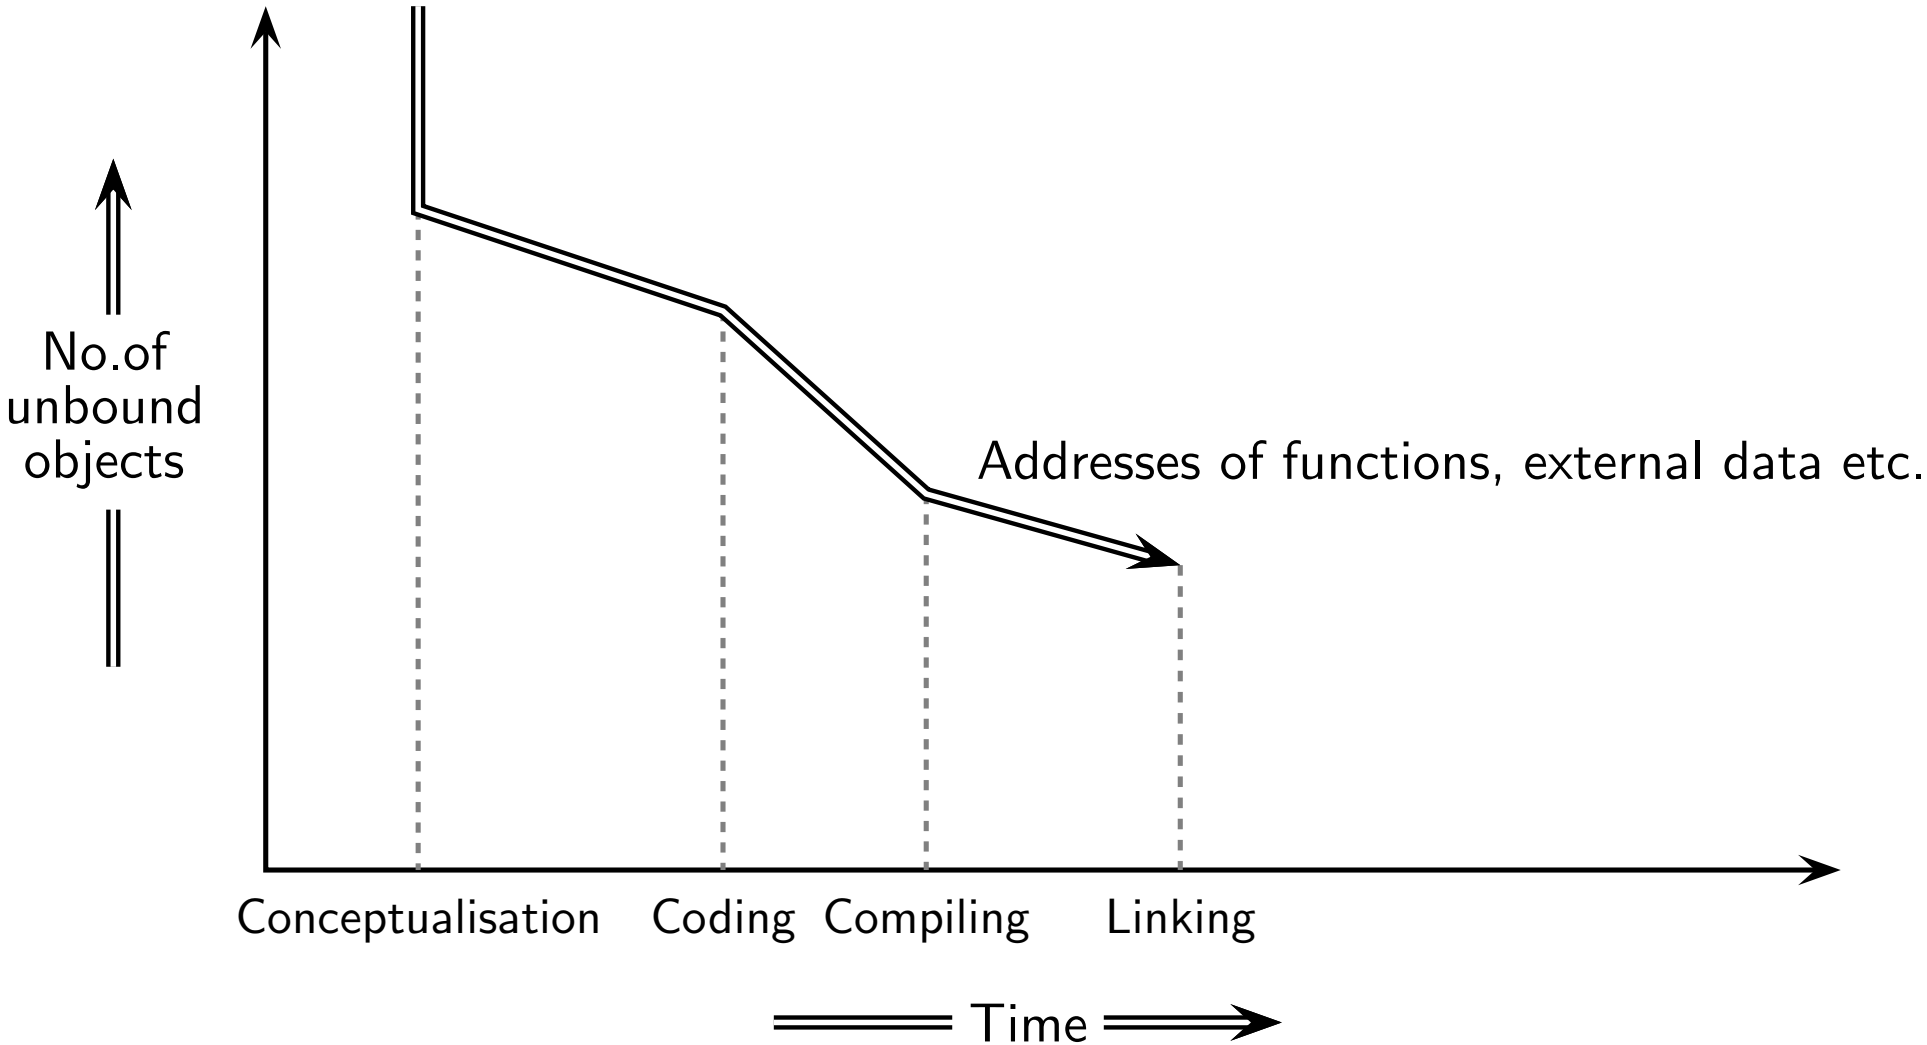
Functions, variables, their types etc.
No.of unbound objects
Conceptualisation
Coding
Time

Binding



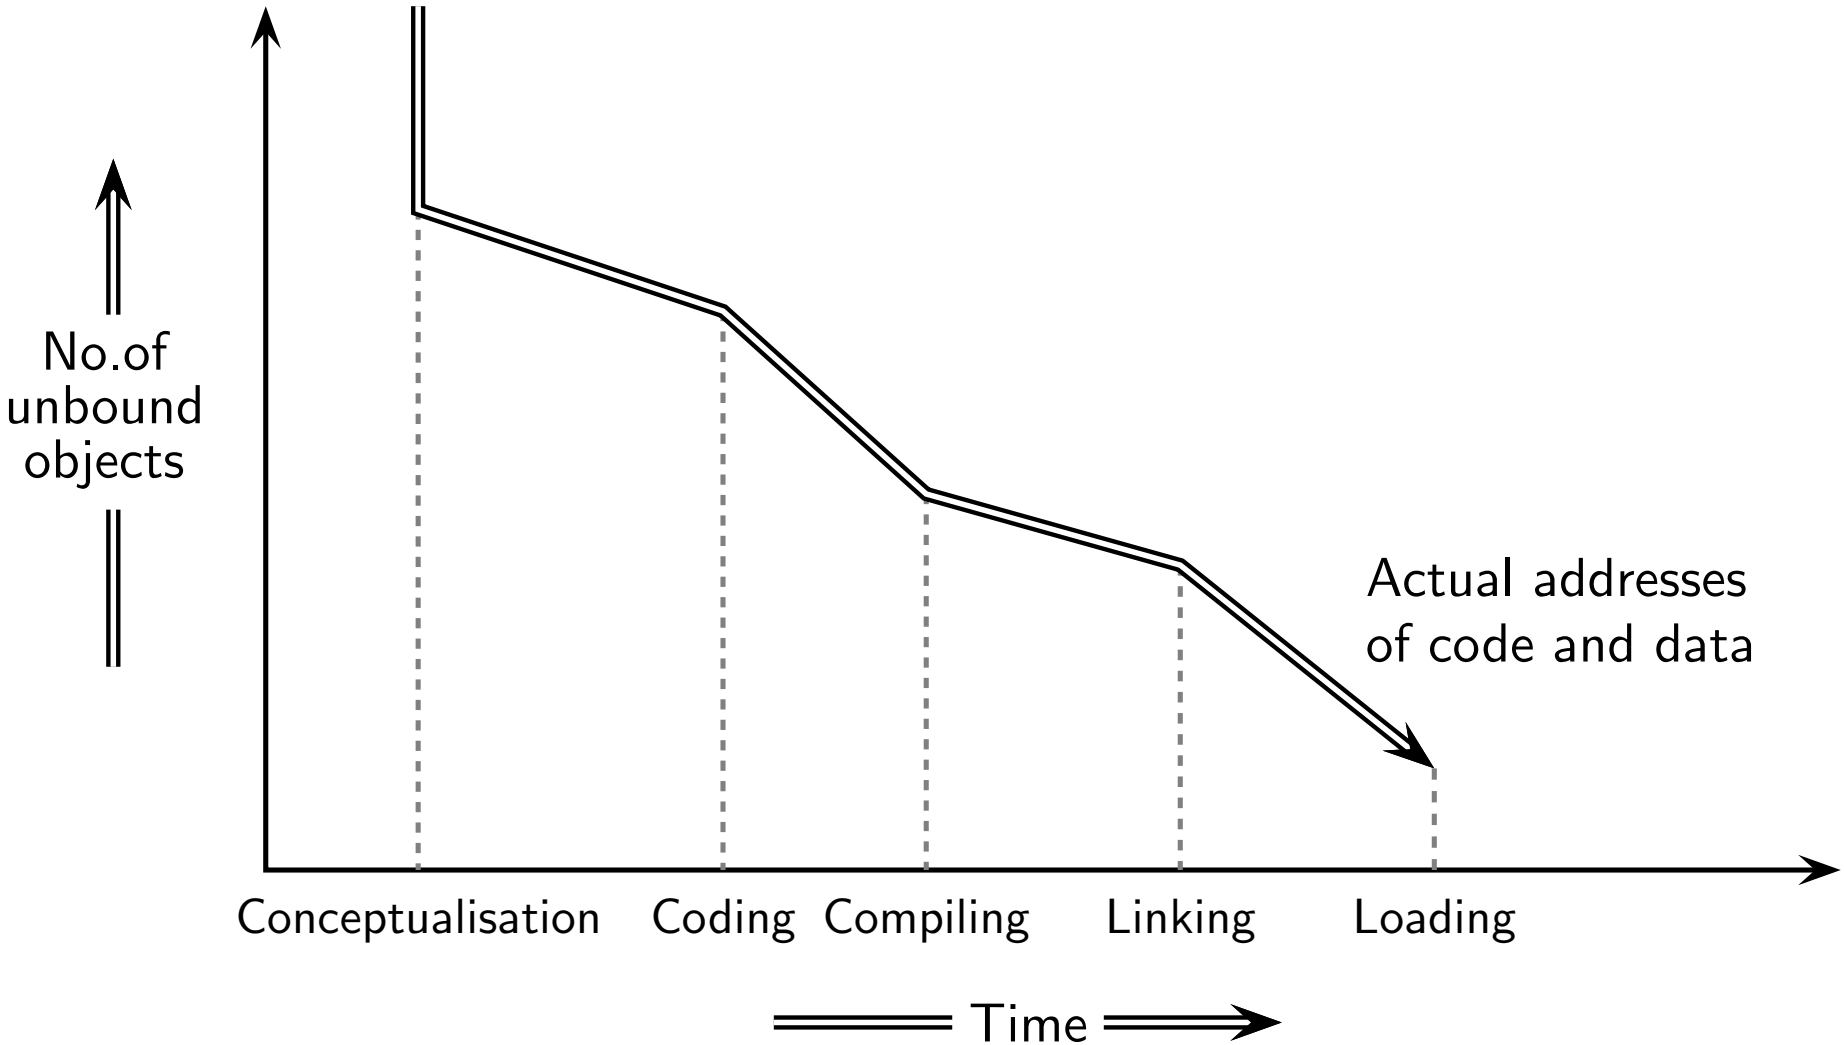
No.of
unbound
objects
Machine instructions, registers etc.
Conceptualisation
Coding
Compiling
Time

Binding



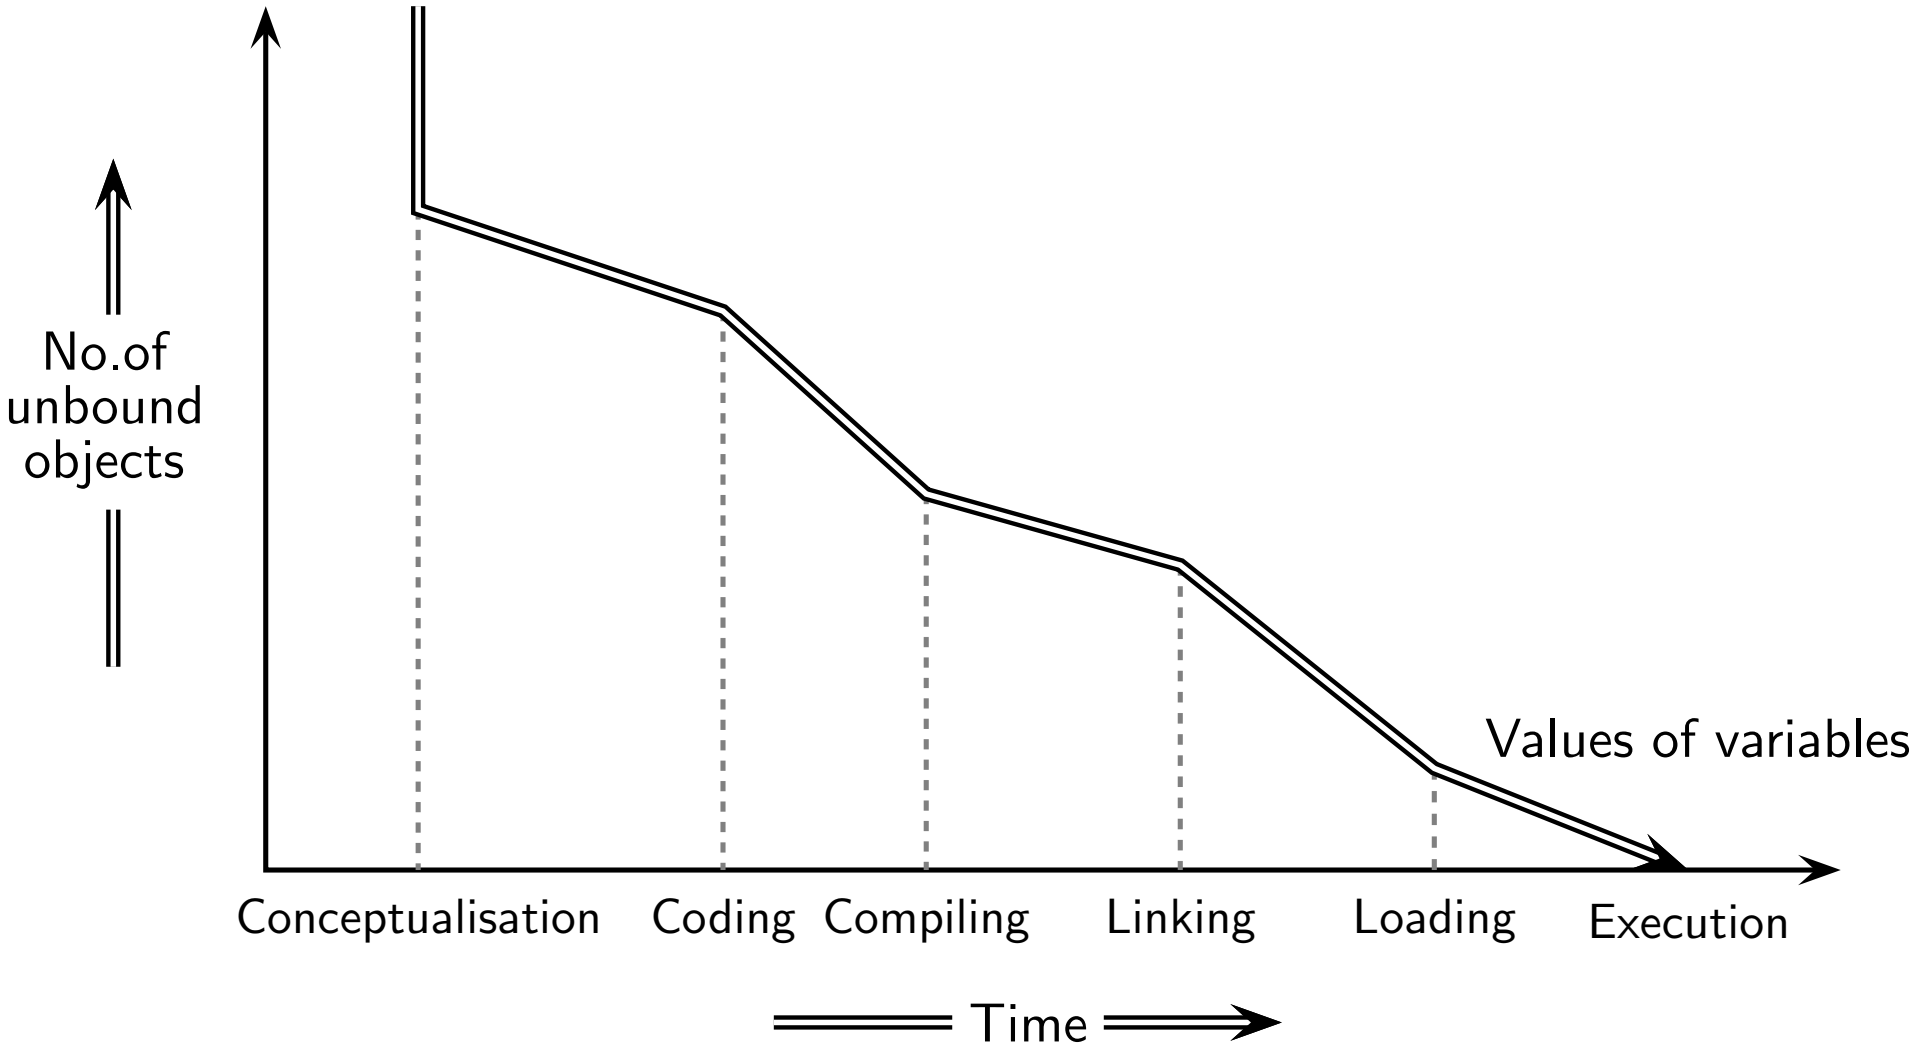
No.of
unbound
objects
Addresses of functions, external data etc.
Conceptualisation
Coding
Compiling
Linking
Time

Binding



No.of
unbound
objects
Actual addresses
of code and data
Conceptualisation
Coding
Compiling
Linking
Loading
Time

Binding



No.of
unbound
objects
Values of variables

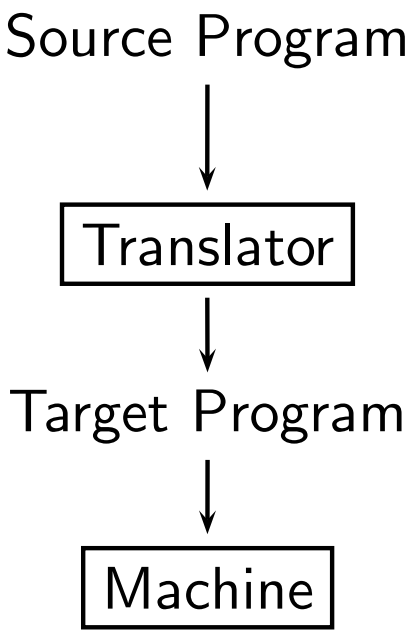
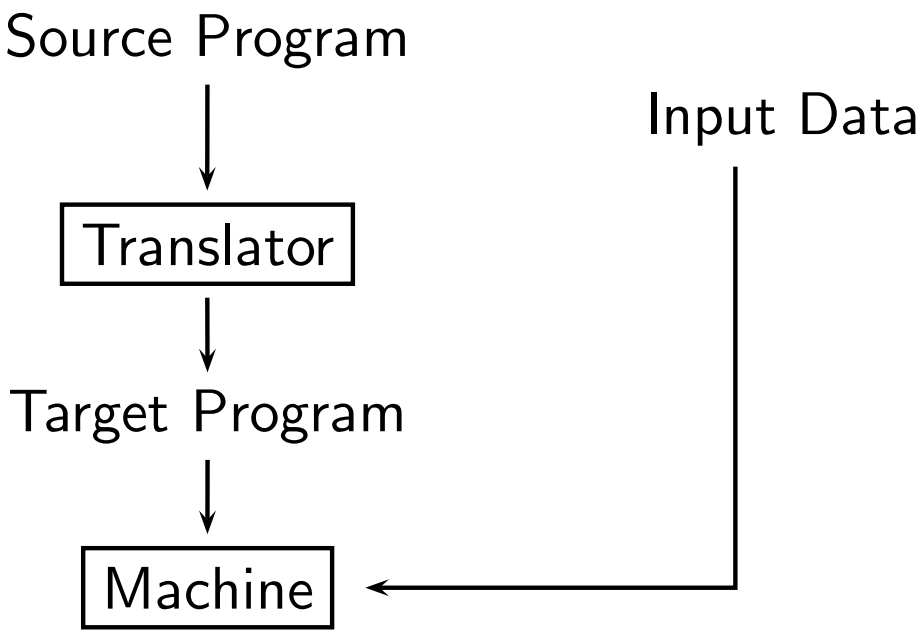
Coding
Compiling
Linking
Loading
Execution
Time

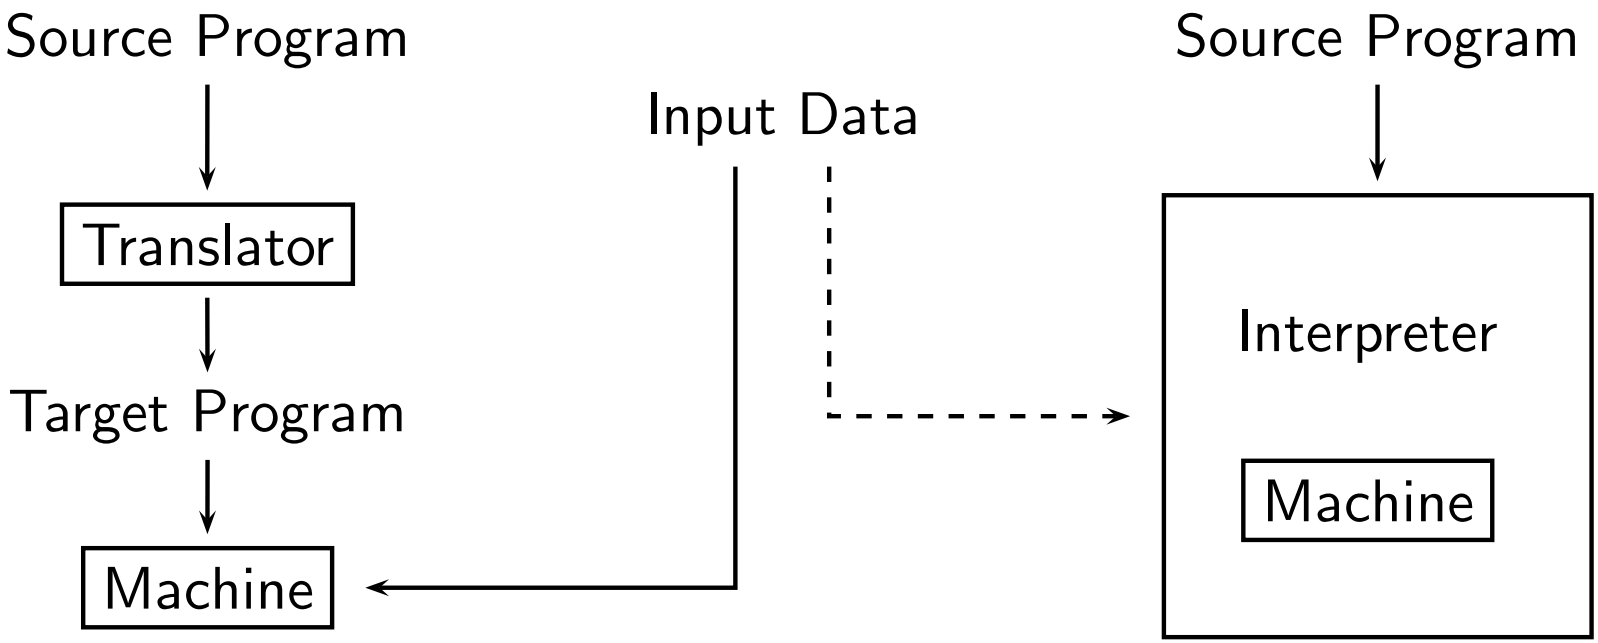
Implementation Mechanisms



Implementation Mechanisms

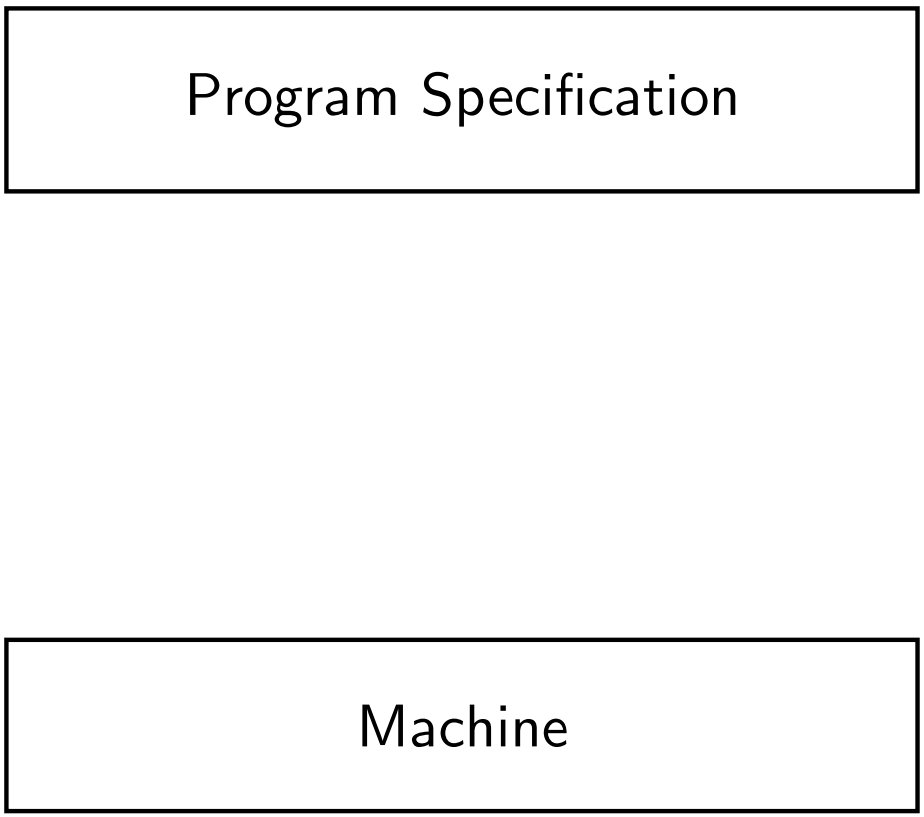


Implementation Mechanisms



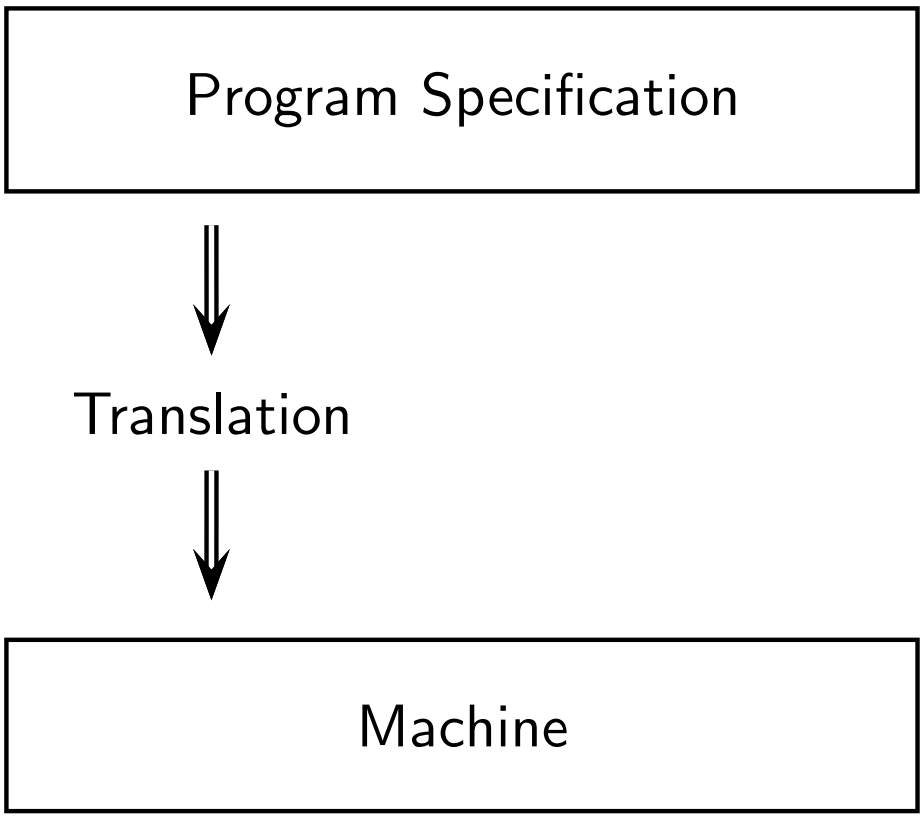
Implementation Mechanisms as "Bridges"

- "Gap" between the "levels" of program specification and execution



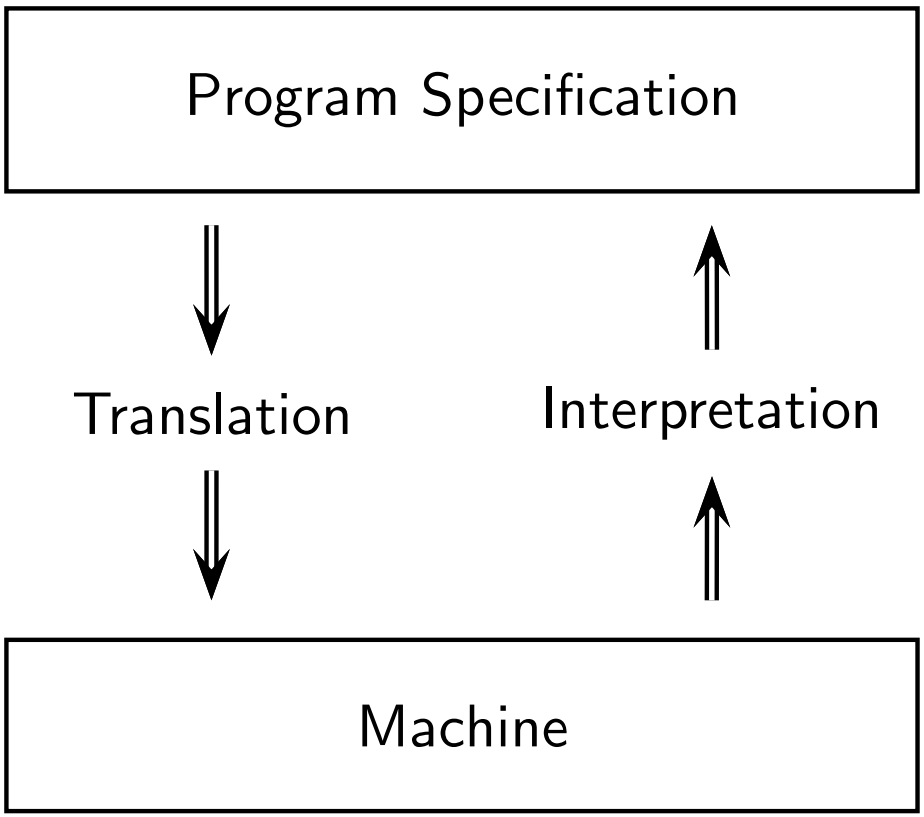
Implementation Mechanisms as "Bridges"

- "Gap" between the "levels" of program specification and execution



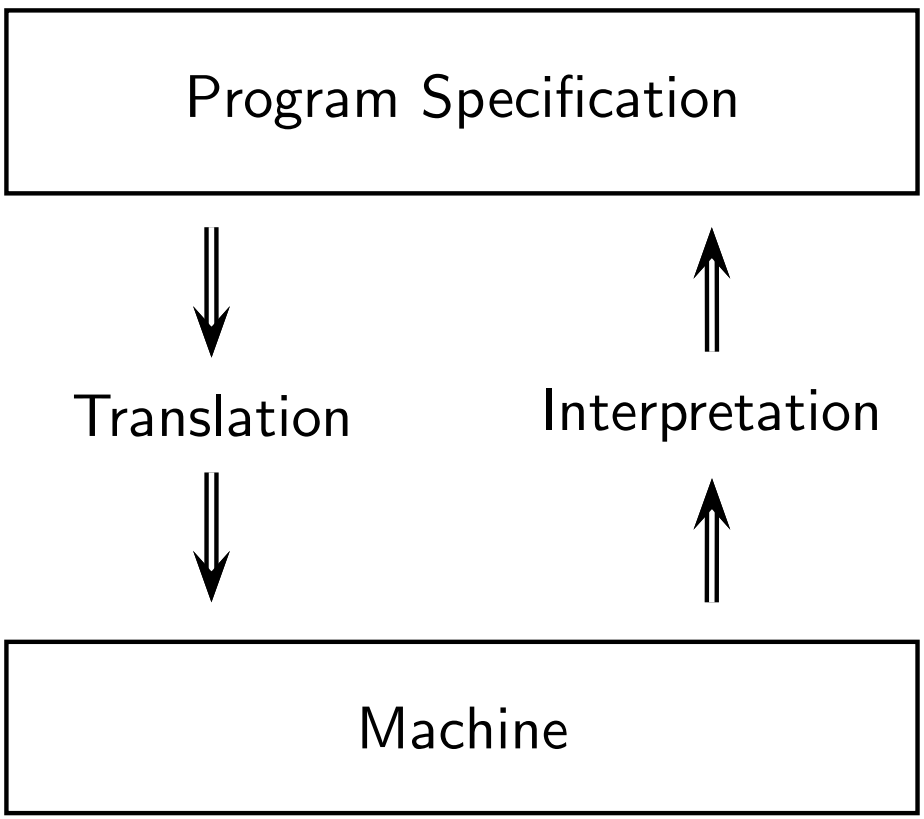
Implementation Mechanisms as "Bridges"

- "Gap" between the "levels" of program specification and execution



Implementation Mechanisms as "Bridges"

- "Gap" between the "levels" of program specification and execution



State : Variables
Operations: Expressions, Control Flow

State : Memory, Registers
Operations: Machine Instructions

High and Low Level Abstractions

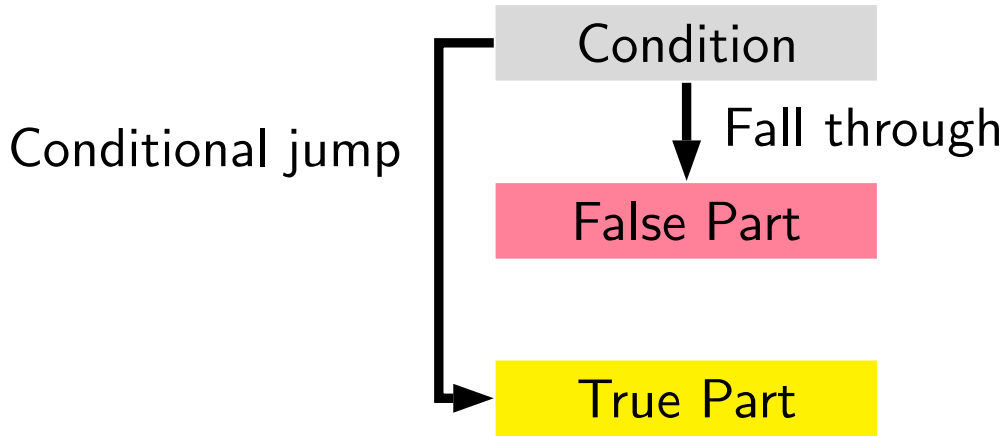
Input C statement

```
a = b<10?b:c;
```

Spim Assembly Equivalent

```
     lw   $t0, 4($fp)   ;     t0 <- b           # Is b smaller
     slti $t0, $t0, 10  ;     t0 <- t0 < 10     # than 10?
     not  $t0, $t0      ;     t0 <- !t0
     bgtz $t0, L0:      ;     if t0>=0 goto L0
     lw   $t0, 4($fp)   ;     t0 <- b           # YES
     b    L1:           ;     goto L1
L0:  lw   $t0, 8($fp)   ;L0:  t0 <- c           # NO
L1:  sw   0($fp), $t0   ;L1:  a <- t0
```

High and Low Level Abstractions



Input C statement

```
a = b<10?b:c;
```

Spim Assembly Equivalent

```
     lw   $t0, 4($fp)   ;     t0 <- b           # Is b smaller
     slti $t0, $t0, 10  ;     t0 <- t0 < 10     # than 10?
     not  $t0, $t0      ;     t0 <- !t0
     bgtz $t0, L0:      ;     if t0>=0 goto L0
     lw   $t0, 4($fp)   ;     t0 <- b           # YES
     b    L1:           ;     goto L1
L0:  lw   $t0, 8($fp)   ;L0:  t0 <- c           # NO
L1:  sw   0($fp), $t0   ;L1:  a <- t0
```

High and Low Level Abstractions

NOT Condition

True Part

False Part

Input C statement

```
a = b<10?b:c;
```

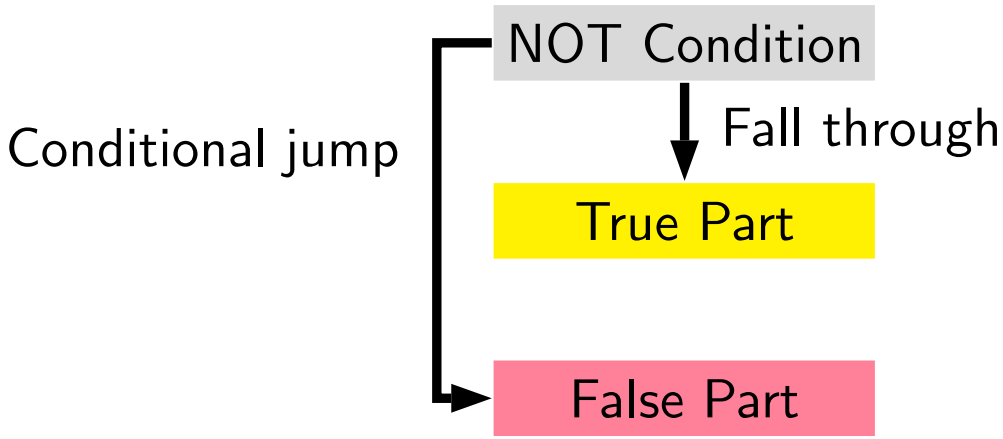
Spim Assembly Equivalent

```
     lw   $t0, 4($fp)   ;     t0 <- b           # Is b smaller
     slti $t0, $t0, 10  ;     t0 <- t0 < 10     # than 10?
     not  $t0, $t0      ;     t0 <- !t0
     bgtz $t0, L0:      ;     if t0>=0 goto L0
     lw   $t0, 4($fp)   ;     t0 <- b           # YES
     b    L1:           ;     goto L1
L0:  lw   $t0, 8($fp)   ;L0:  t0 <- c           # NO
L1:  sw   0($fp), $t0   ;L1:  a <- t0
```

High and Low Level Abstractions

Input C statement

```
a = b<10?b:c;
```



Spim Assembly Equivalent

```
     lw   $t0, 4($fp)   ;     t0 <- b           # Is b smaller
     slti $t0, $t0, 10  ;     t0 <- t0 < 10     # than 10?
     not  $t0, $t0      ;     t0 <- !t0
     bgtz $t0, L0:      ;     if t0>=0 goto L0
     lw   $t0, 4($fp)   ;     t0 <- b           # YES
     b    L1:           ;     goto L1
L0:  lw   $t0, 8($fp)   ;L0:  t0 <- c           # NO
L1:  sw   0($fp), $t0   ;L1:  a <- t0
```

Implementation Mechanisms

- Translation = Analysis + Synthesis

  Interpretation = Analysis + Execution

Implementation Mechanisms

- Translation = Analysis + Synthesis

  Interpretation = Analysis + Execution

- Translation Instructions $\Longrightarrow$ Equivalent Instructions

Implementation Mechanisms

- Translation = Analysis + Synthesis

  Interpretation = Analysis + Execution

- Translation Instructions $\Longrightarrow$ Equivalent Instructions

  Interpretation Instructions $\Longrightarrow$ Actions Implied by Instructions

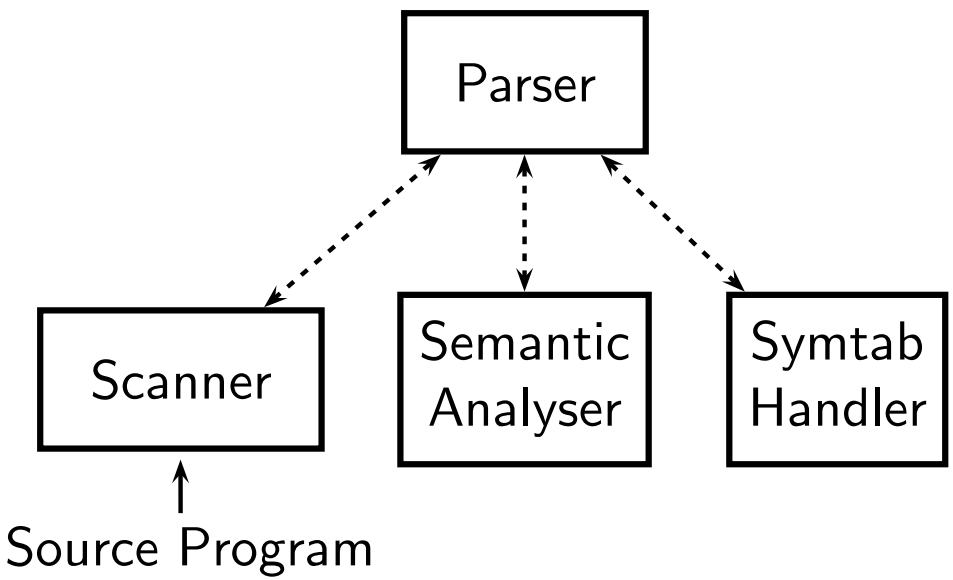
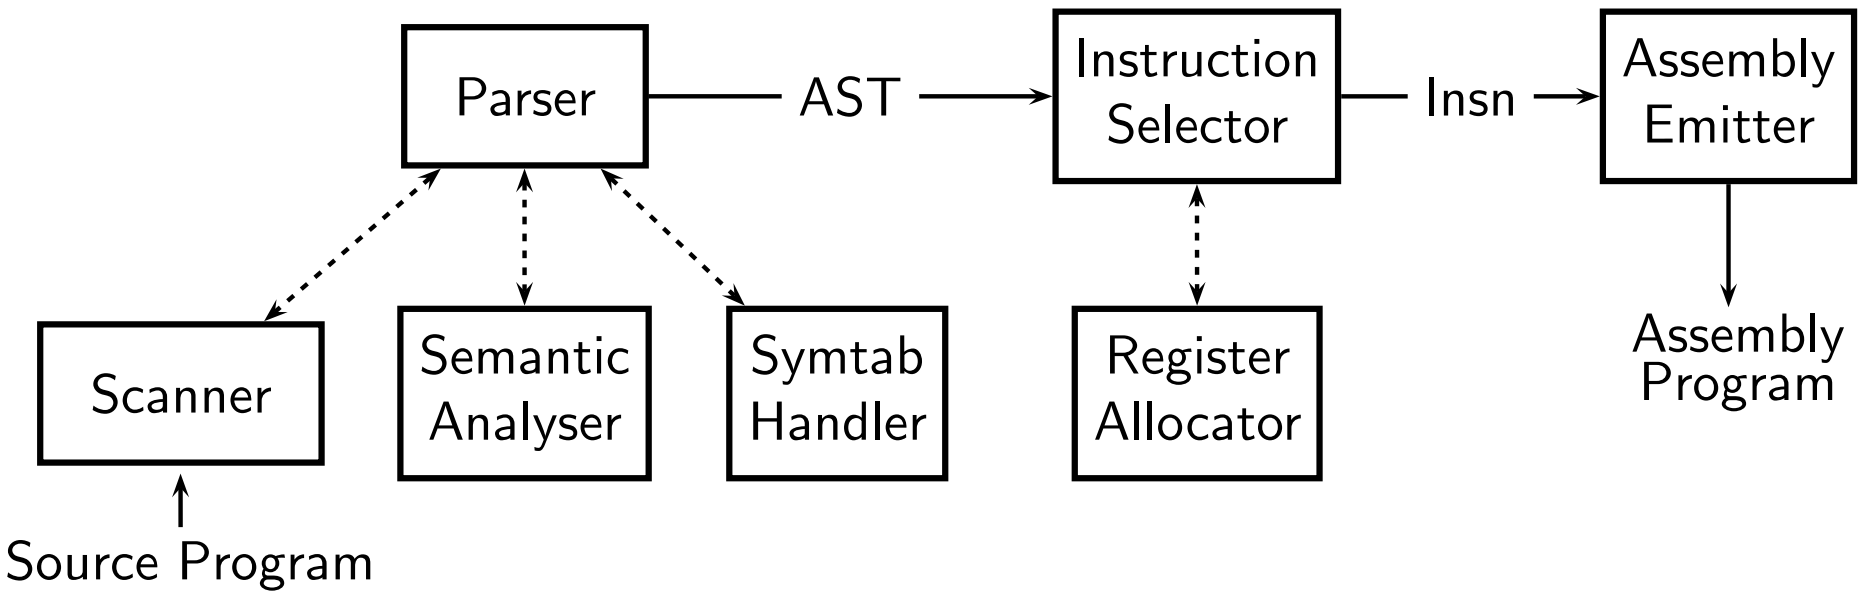
Part 2

An Overview of Compilation Phases

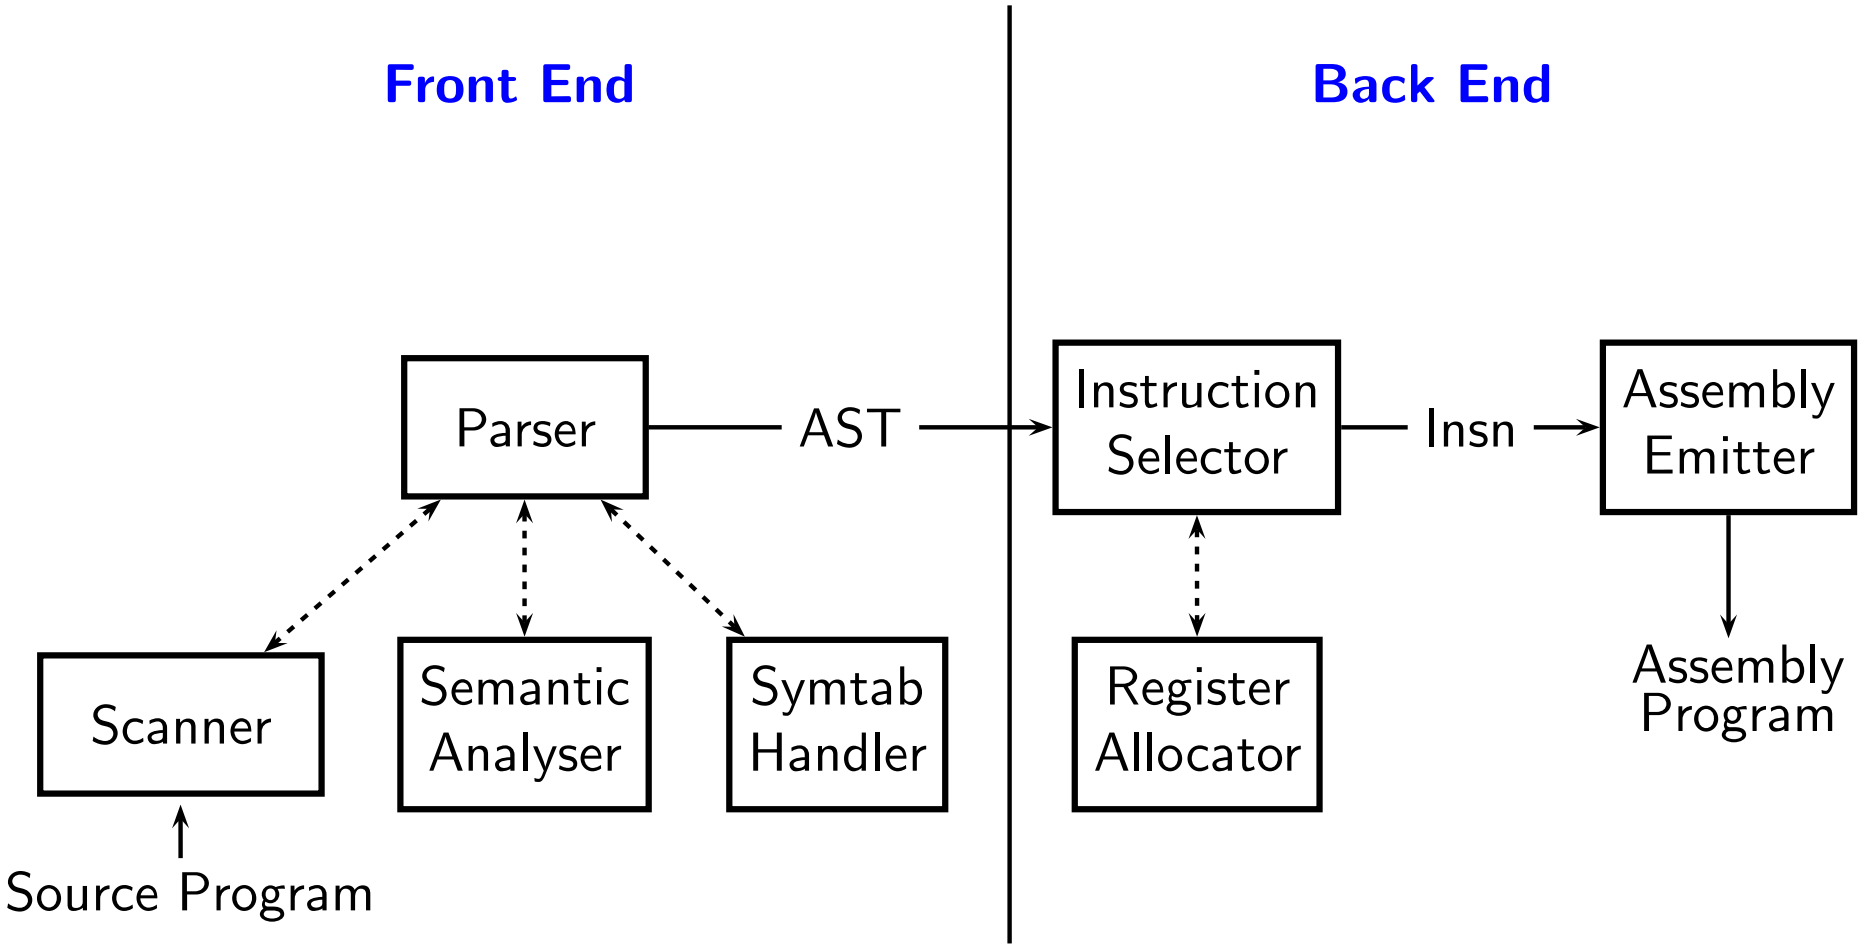
The Structure of a Simple Compiler



The Structure of a Simple Compiler



The Structure of a Simple Compiler

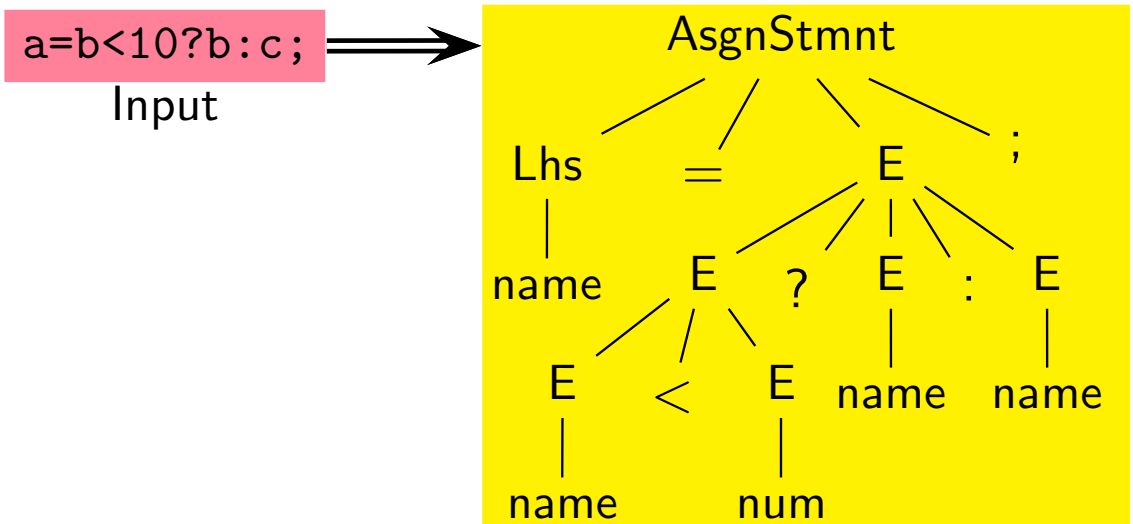


Translation Sequence in Our Compiler: Parsing

```
a=b<10?b:c;
```

Input

Translation Sequence in Our Compiler: Parsing



Parse Tree

Issues:

- Grammar rules, terminals, non-terminals
- Order of application of grammar rules

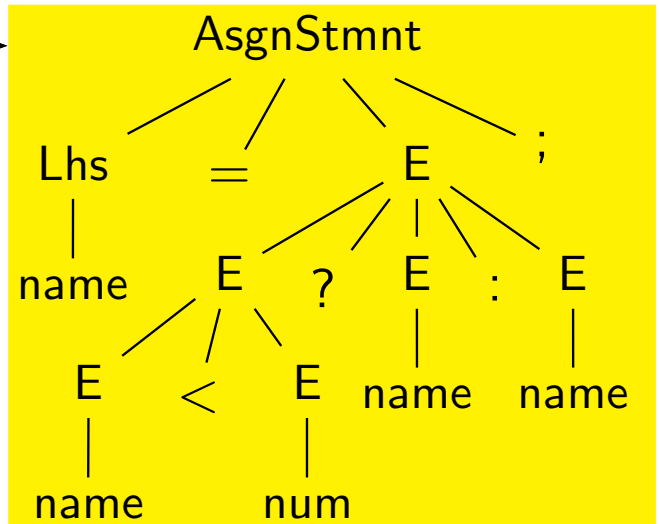
  eg. is it `(a = b<10?)` followed by `(b:c)`?
- Values of terminal symbols

  eg. string "10" vs. integer number 10.

Translation Sequence in Our Compiler: Semantic Analysis

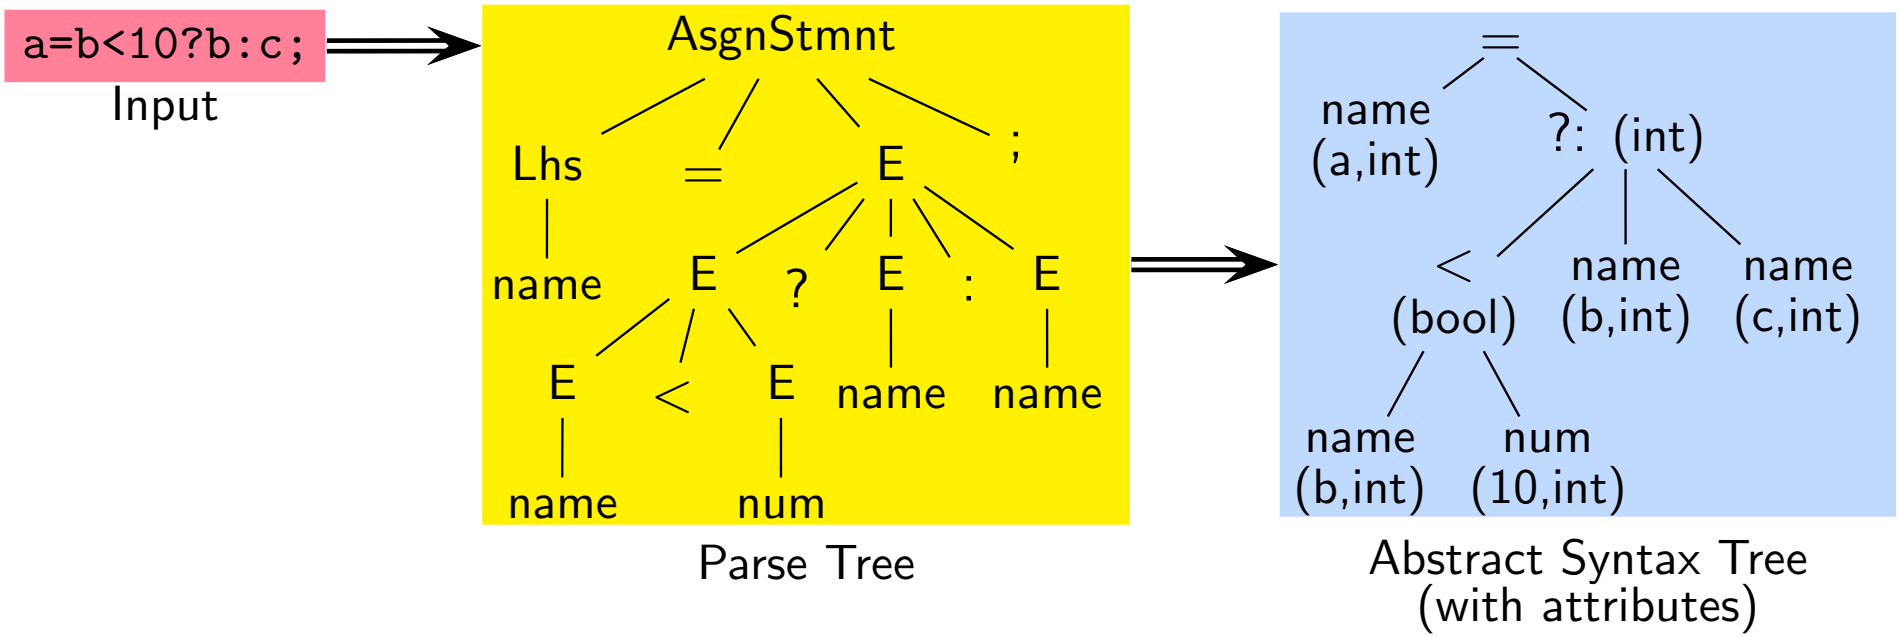
```
a=b<10?b:c;
```

Input



Parse Tree

Translation Sequence in Our Compiler: Semantic Analysis



Issues:

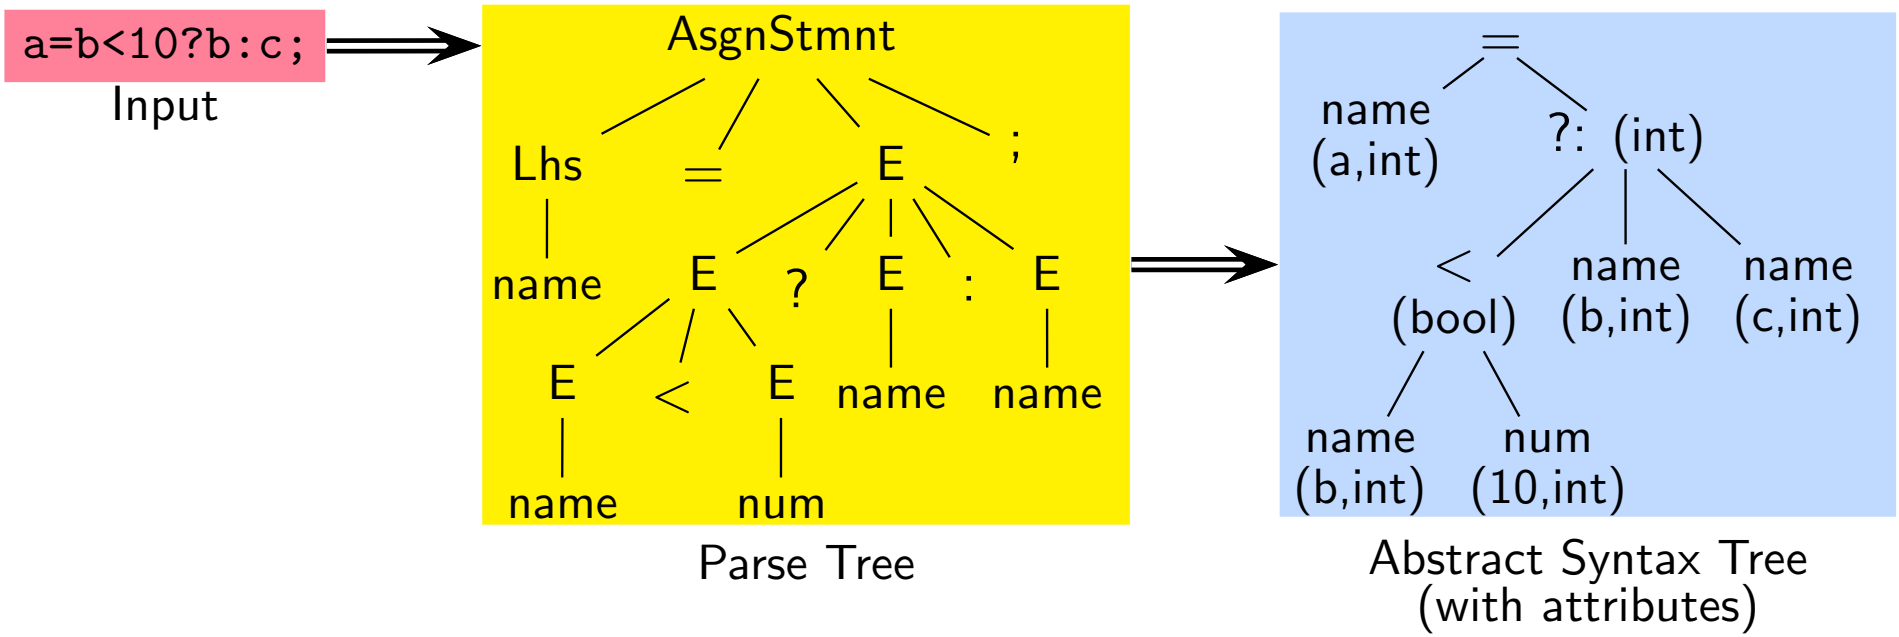
- Symbol tables

  Have variables been declared? What are their types? What is their scope?

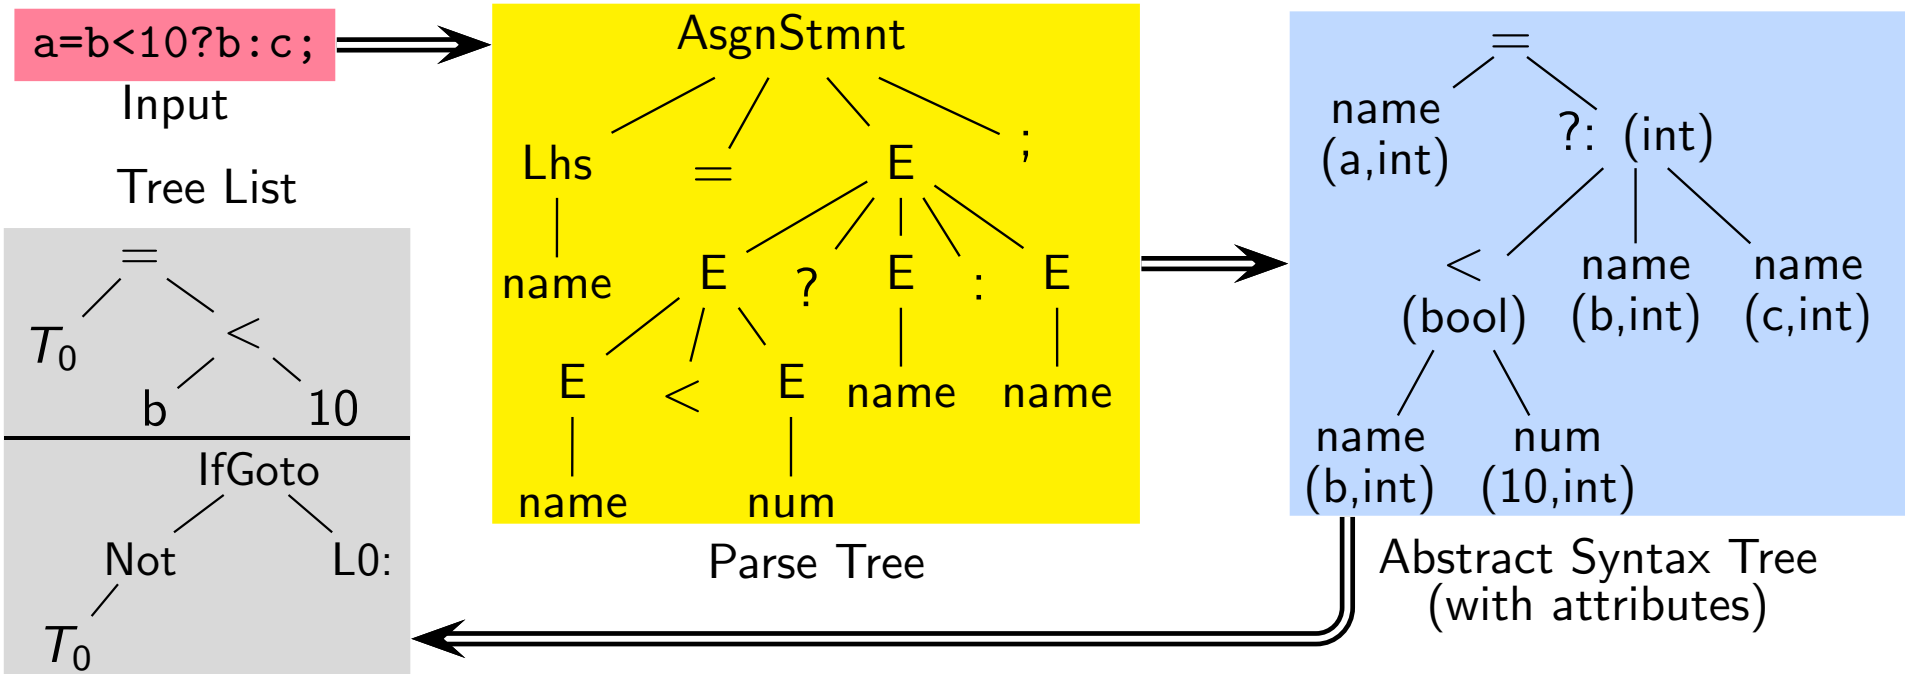
- Type consistency of operators and operands

  The result of computing b<10? is bool and not int

Translation Sequence in Our Compiler: IR Generation



Translation Sequence in Our Compiler: IR Generation



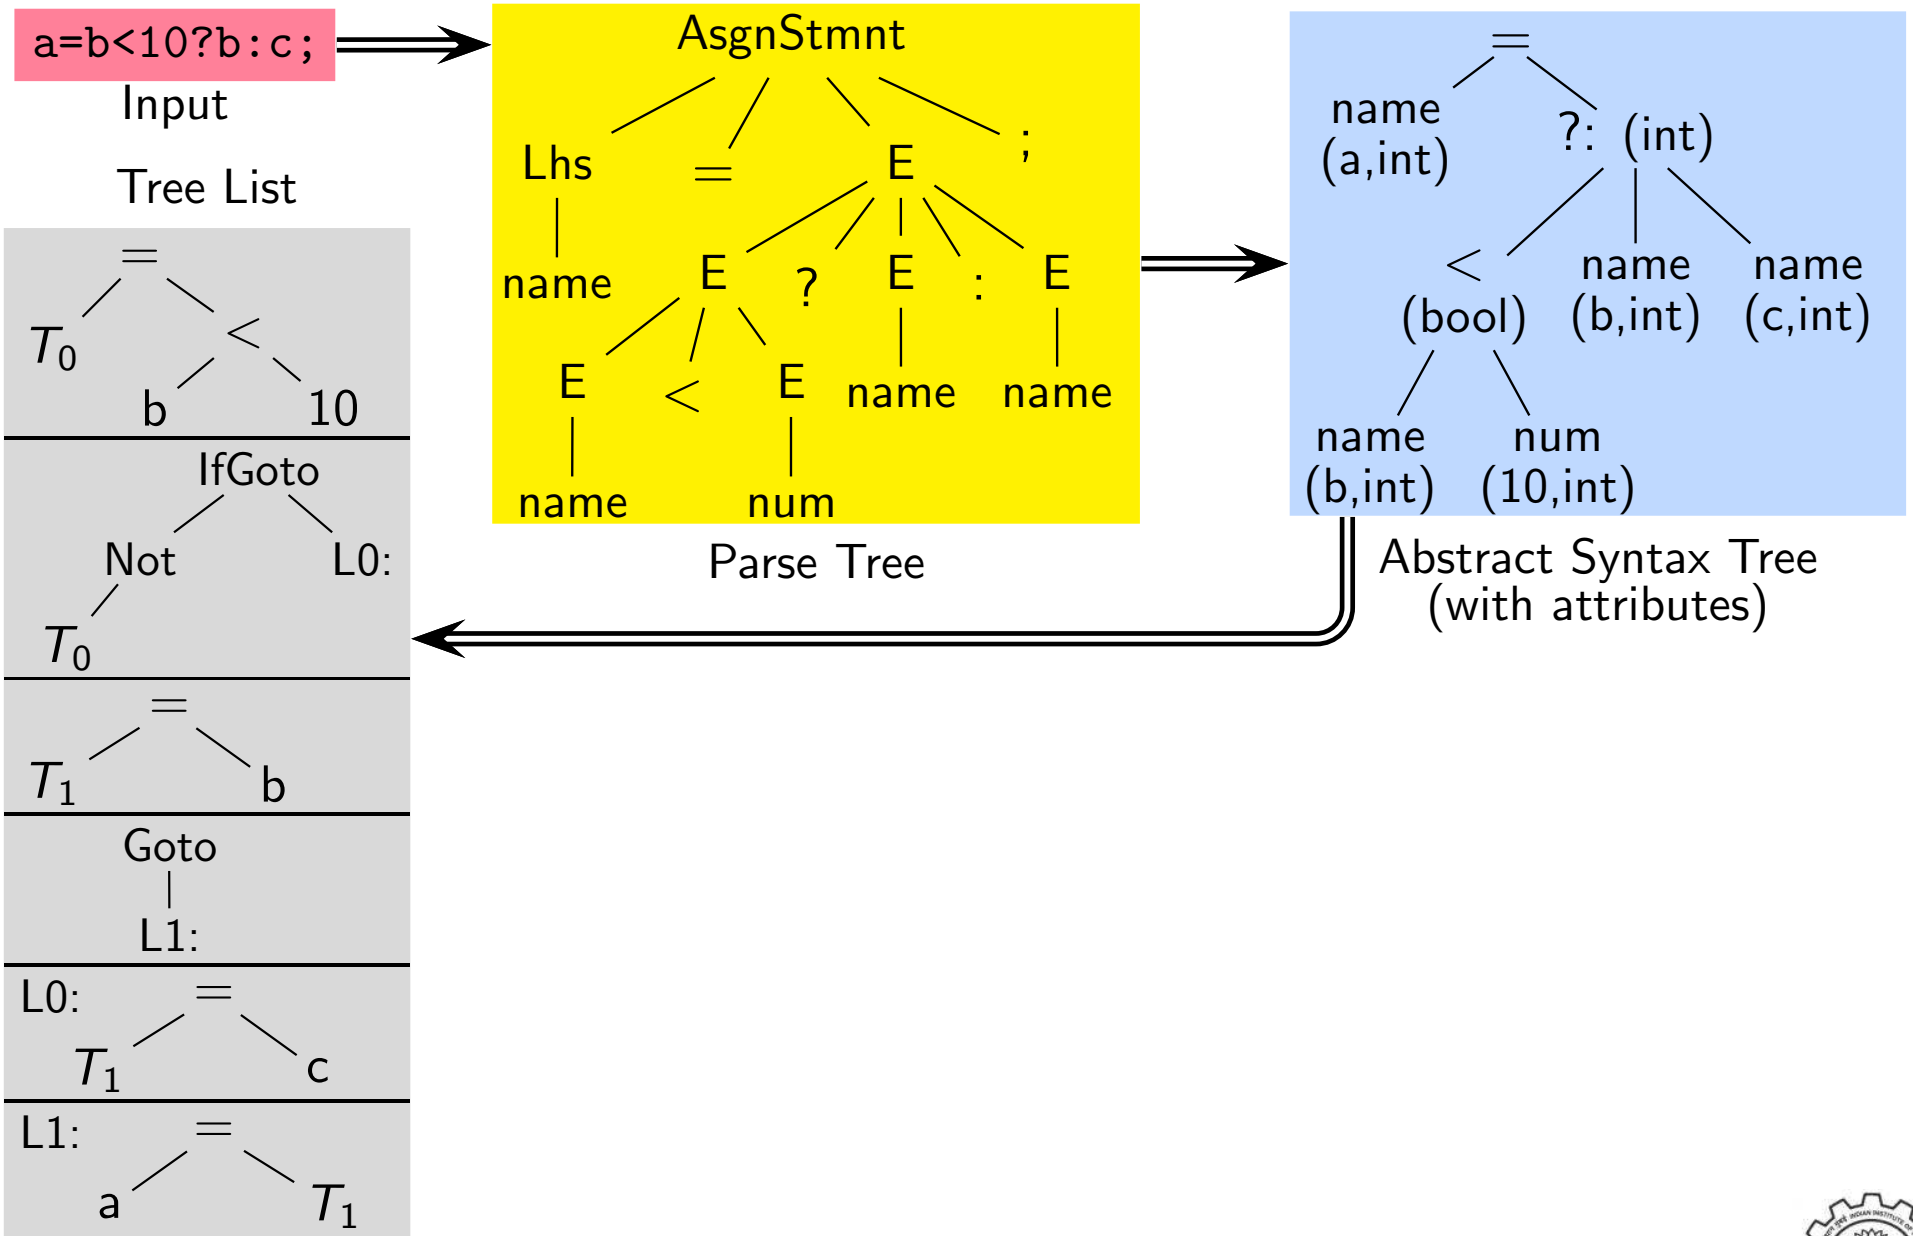
Issues:

- Convert to maximal trees which can be implemented without altering control flow

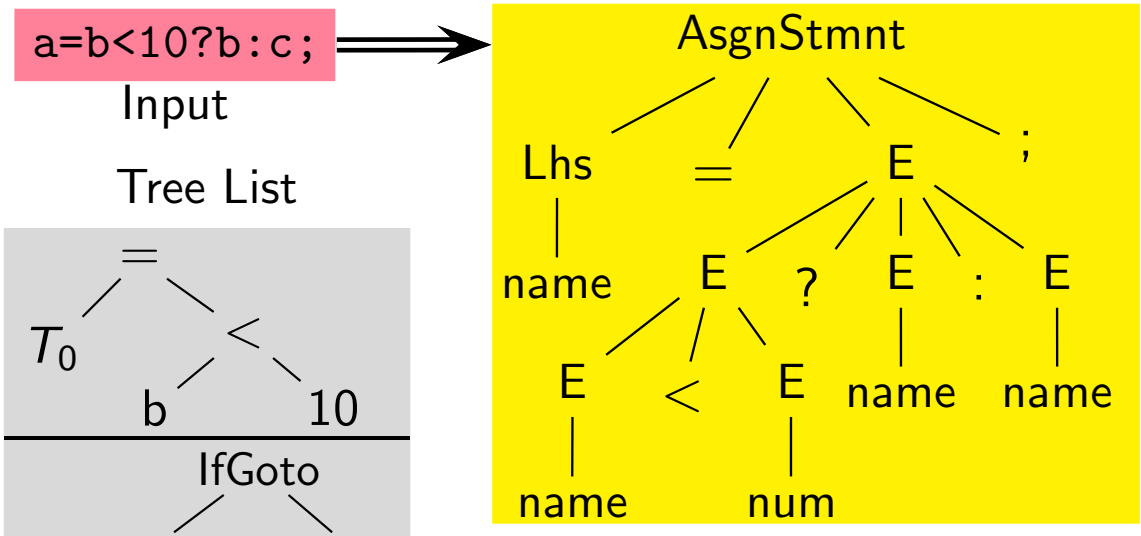
  Simplifies instruction selection and scheduling, register allocation etc.

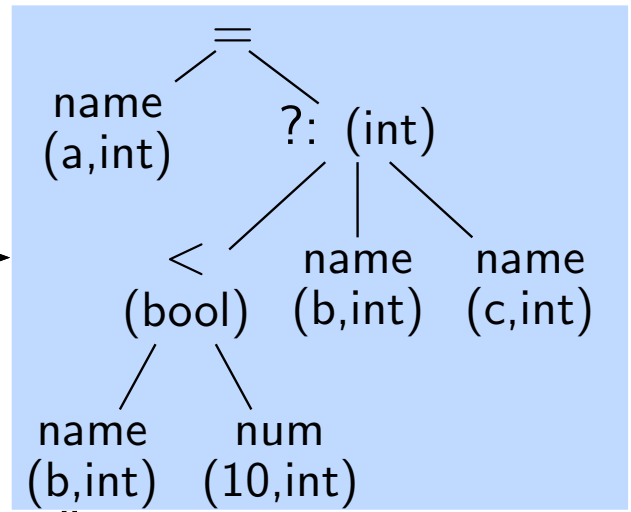
- Linearise control flow by flattening nested control constructs

Translation Sequence in Our Compiler: Instruction Selection

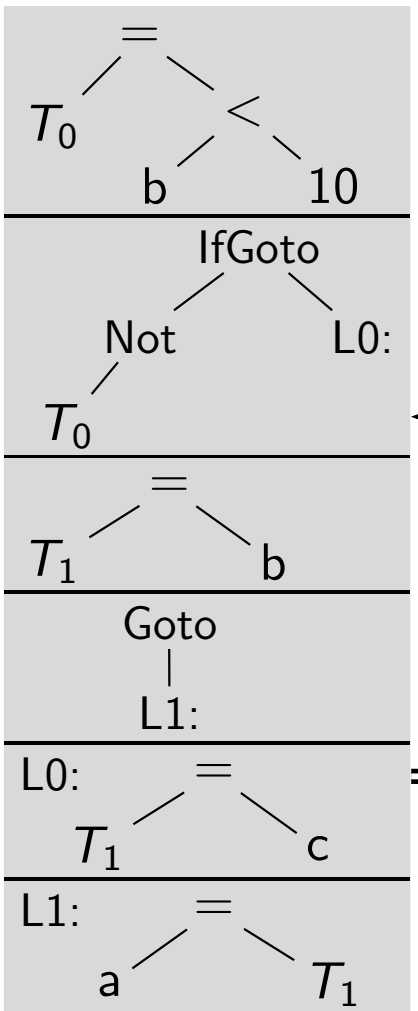


Translation Sequence in Our Compiler: Instruction Selection





Tree List



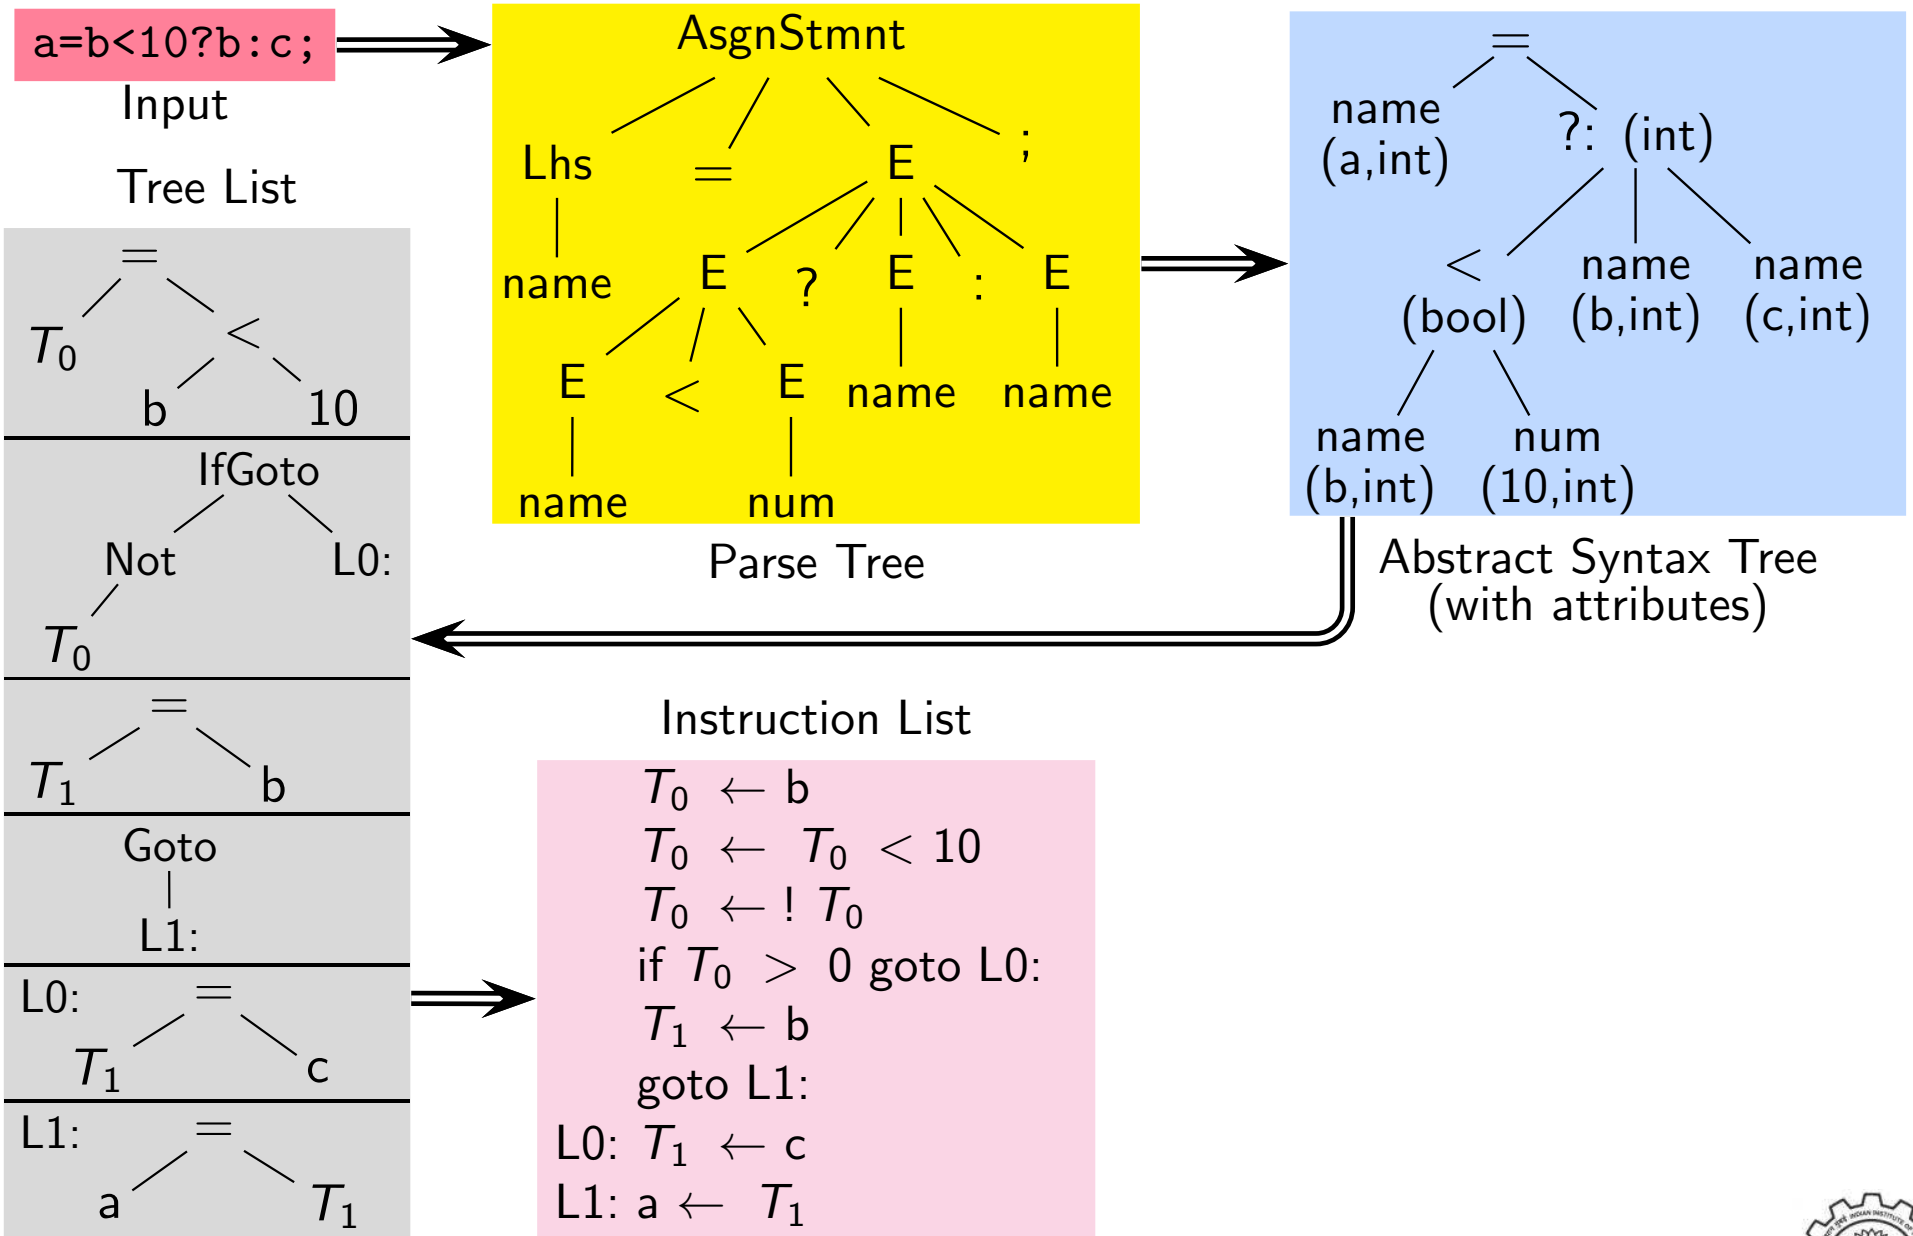
Instruction List

$T_0 \leftarrow$ b
$T_0 \leftarrow T_0 < 10$
$T_0 \leftarrow !\ T_0$
if $T_0 > 0$ goto L0:
$T_1 \leftarrow$ b
goto L1:
L0: $T_1 \leftarrow$ c
L1: a $\leftarrow T_1$

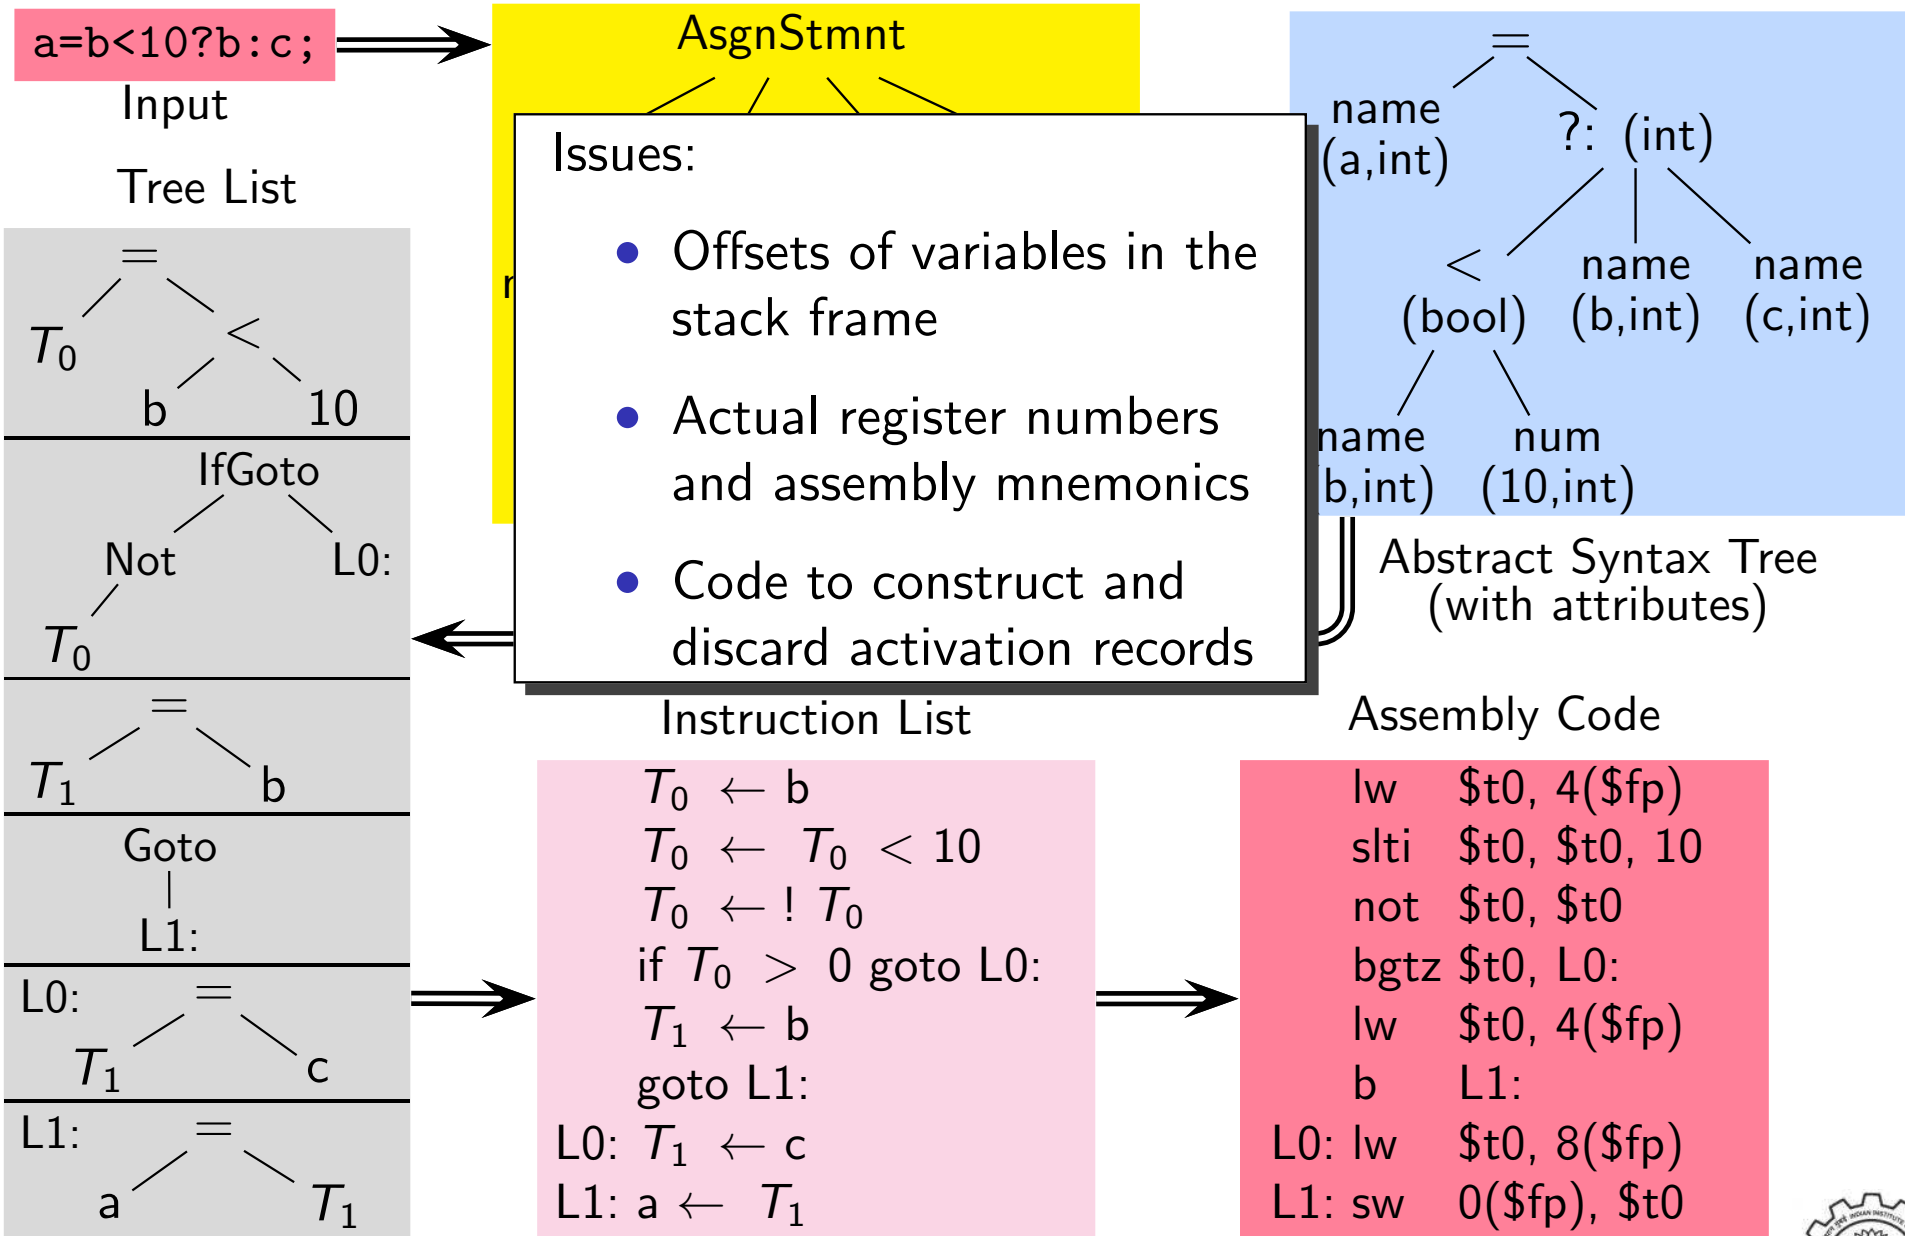
Issues:

- Cover trees with as few machine instructions as possible
- Use temporaries and local registers

Translation Sequence in Our Compiler: Emitting Instructions



Translation Sequence in Our Compiler: Emitting Instructions



Part 3

Compilation Models, Instruction Selection, and Retargetability

Compilation Models

Aho Ullman Model

Davidson Fraser Model

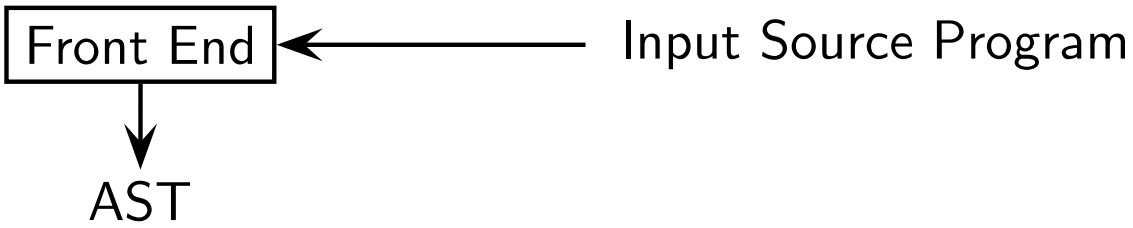
Aho Ullman Model

Davidson Fraser Model



Compilation Models

Aho Ullman Model

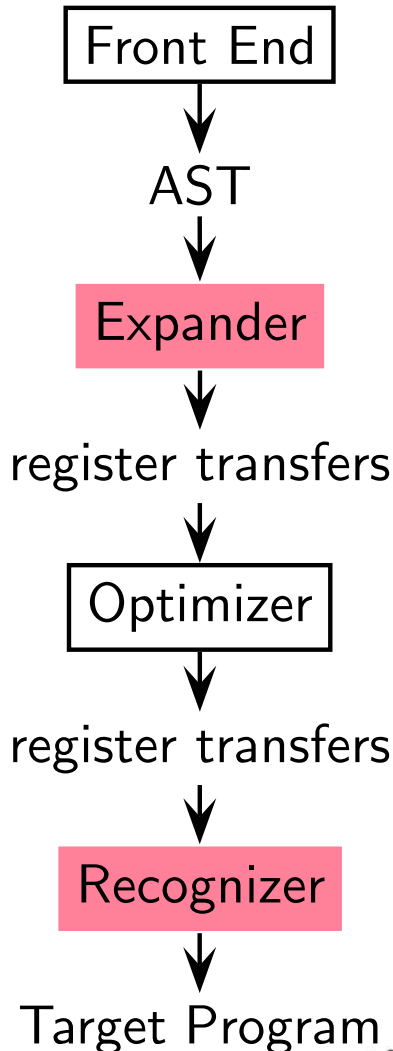
Aho Ullman: Instruction selection

- over optimized IR using
- intelligent tree tiling based algorithms

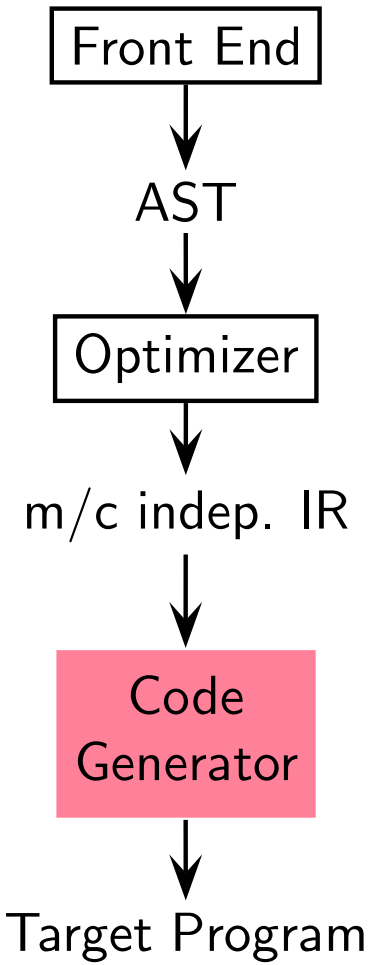
Davidson Fraser: Instruction selection

- over AST using
- simple full tree matching based algorithms that generate
- naive code which is
  - machine dependent, and is
  - optimized subsequently

Davidson Fraser Model



Retargetability in Aho Ullman Model



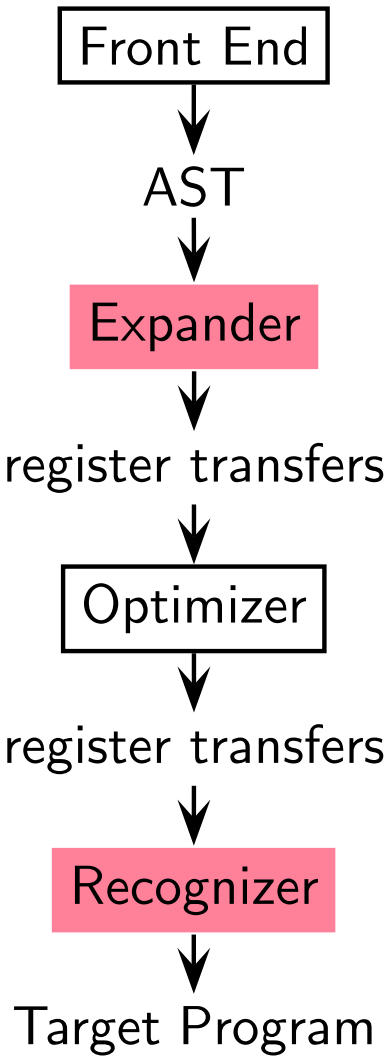
Instruction selection

- over optimized IR using
- intelligent tree tiling based algorithms

Key idea in retargetability:

- Machine independent IR is expressed in the form of trees
- Machine instructions are described in the form of trees
- Trees in the IR are tiled using the instruction trees

Retargetability in Davidson Fraser Model



Instruction selection

- over AST using
- simple full tree matching based algorithms that generate
- naive code which is
  - machine dependent, and is
  - optimized subsequently

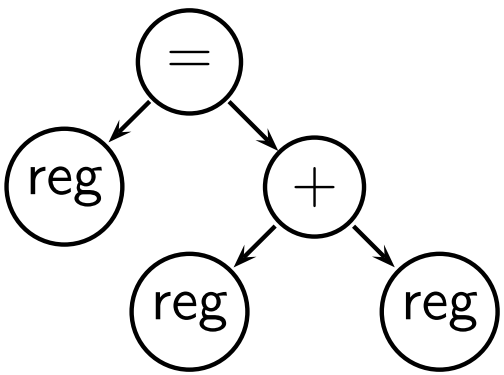
Key idea in retargetability:

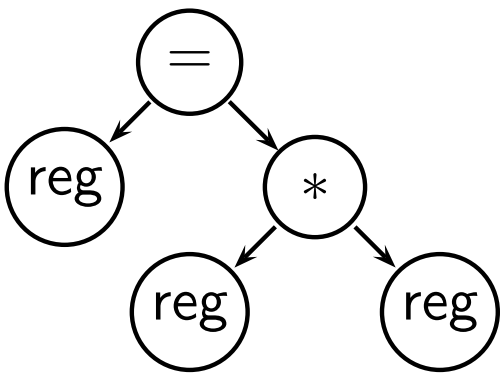
- Register transfers are machine specific but
- their form is machine independent

Full Tree Matching (Davidson Fraser Model)

Instructions are viewed as independent non-composable rules

Machine Instructions	Subject Tree (IR)	Modified Trees
		
		





Full Tree Matching (Davidson Fraser Model)

Instructions are viewed as independent non-composable rules

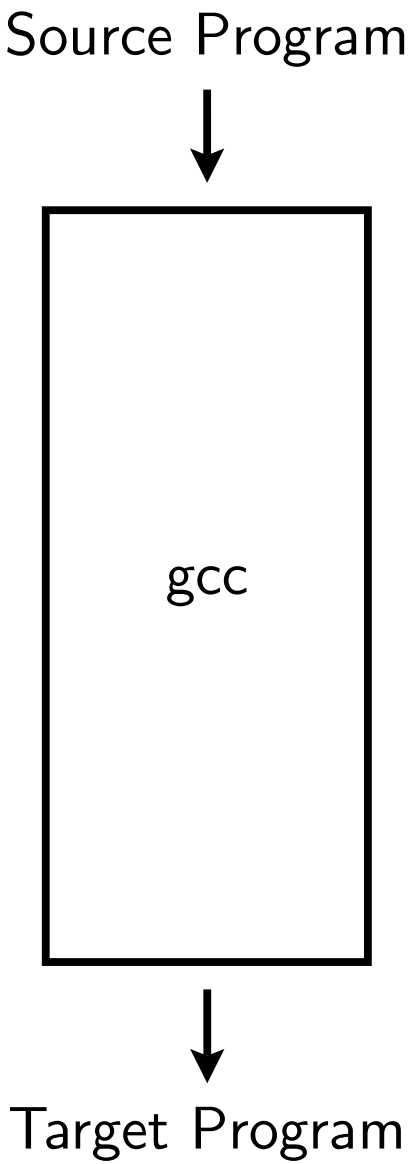
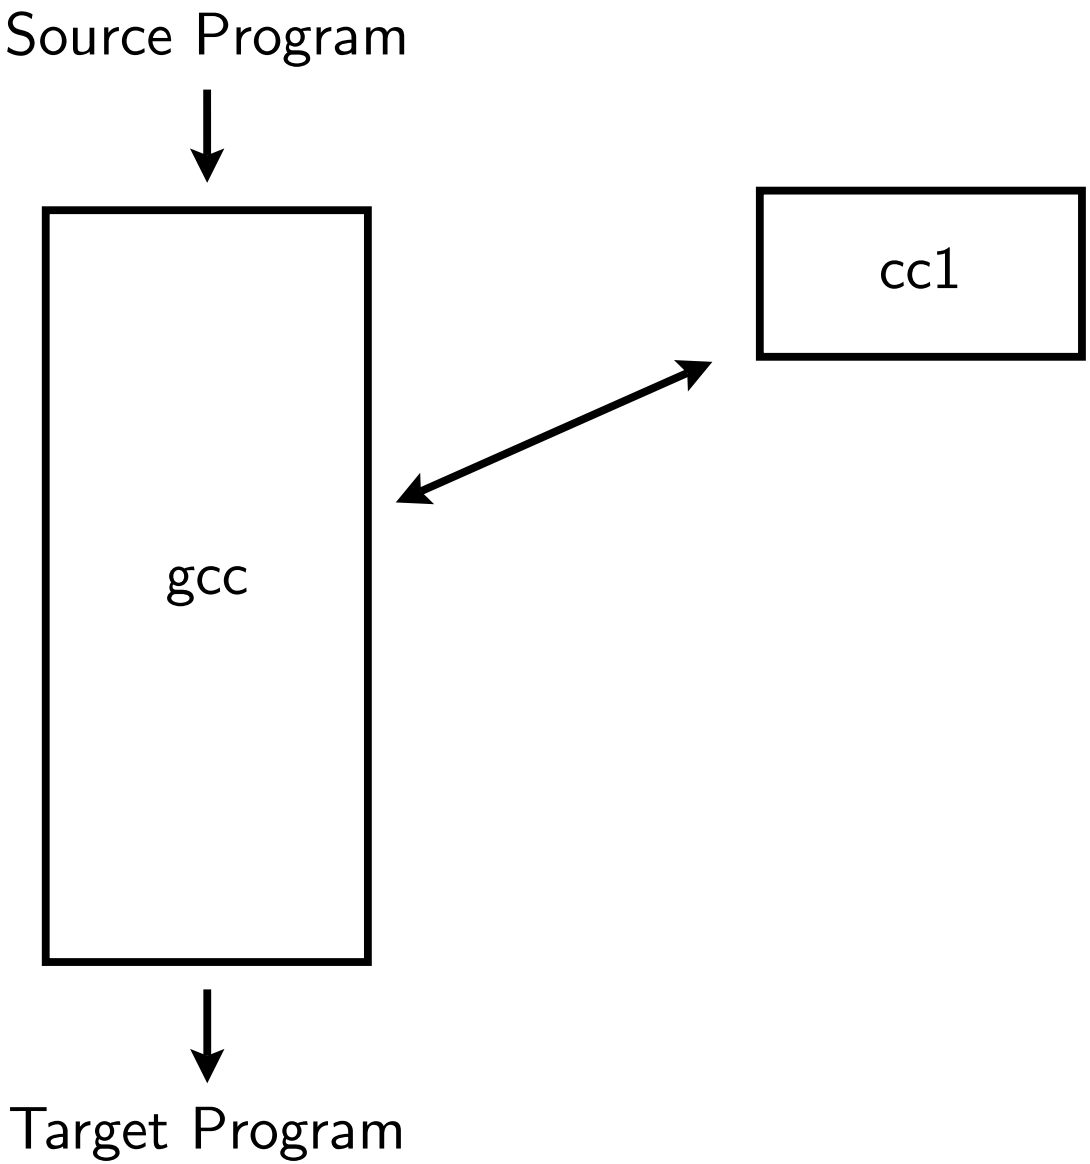
GCC $\equiv$ *The Great Compiler Challenge*

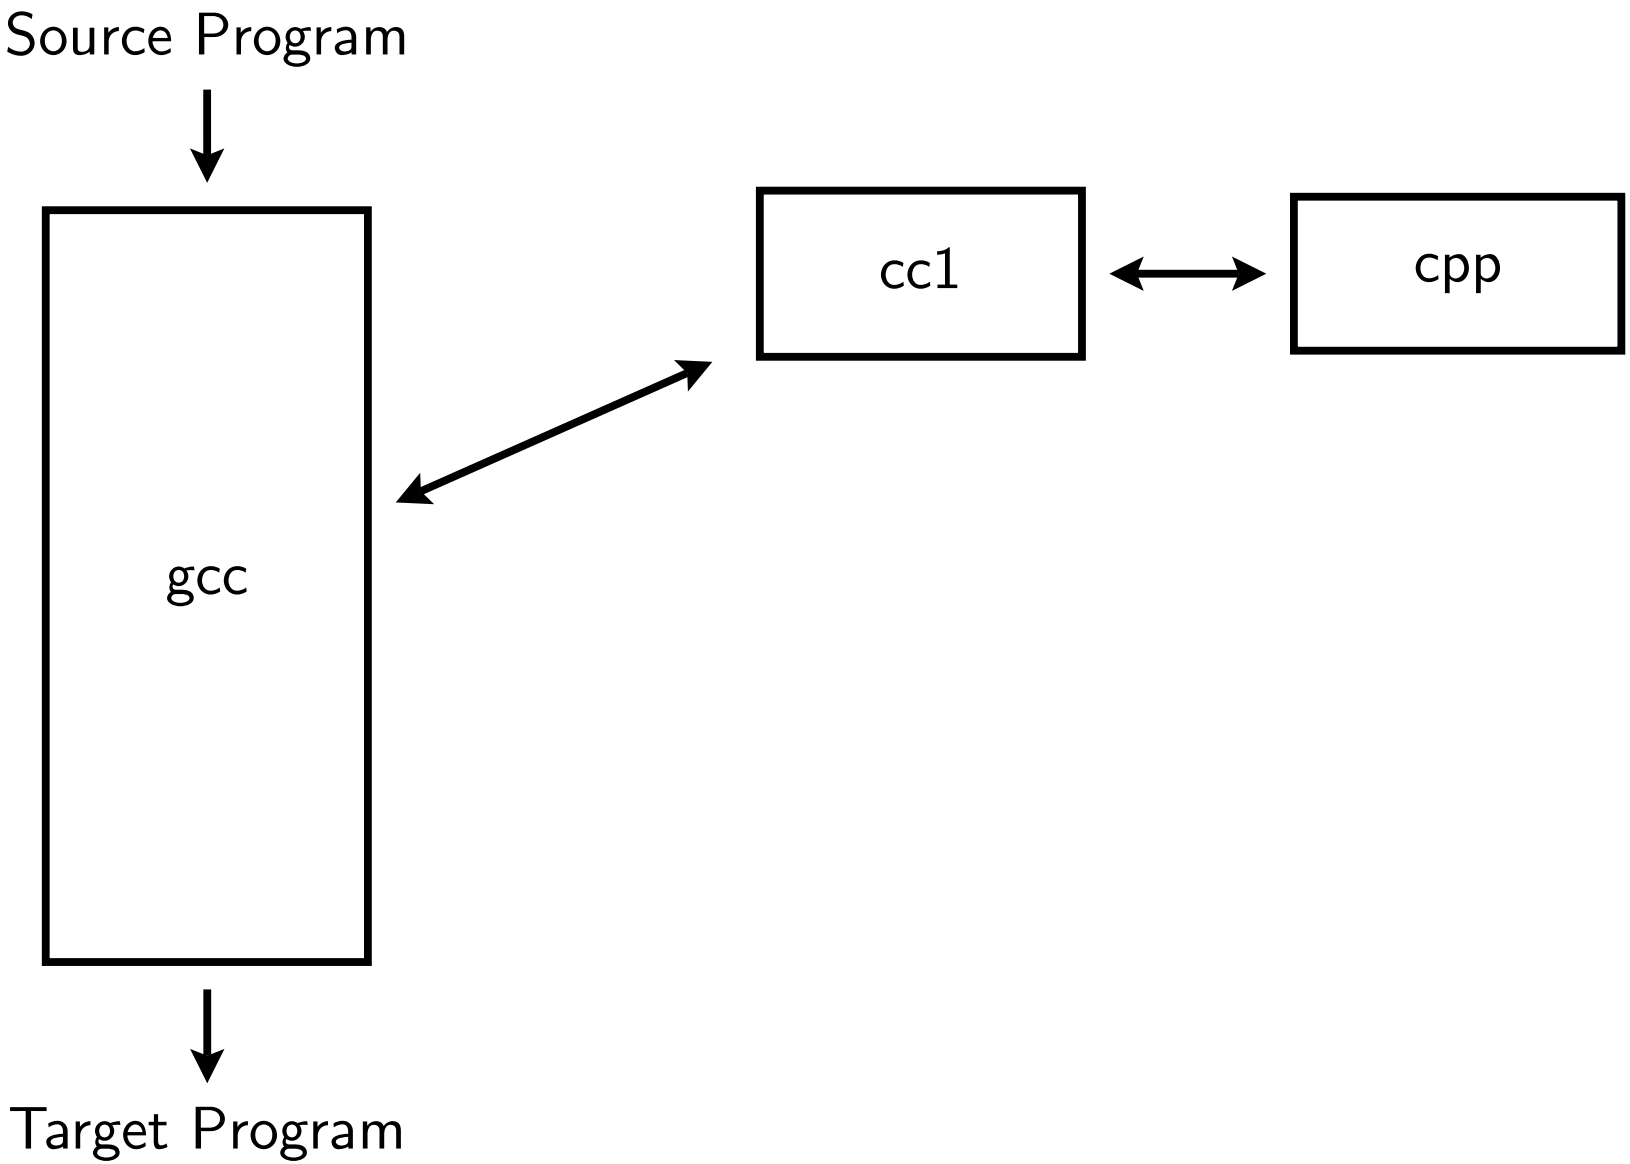
The Gnu Tool Chain



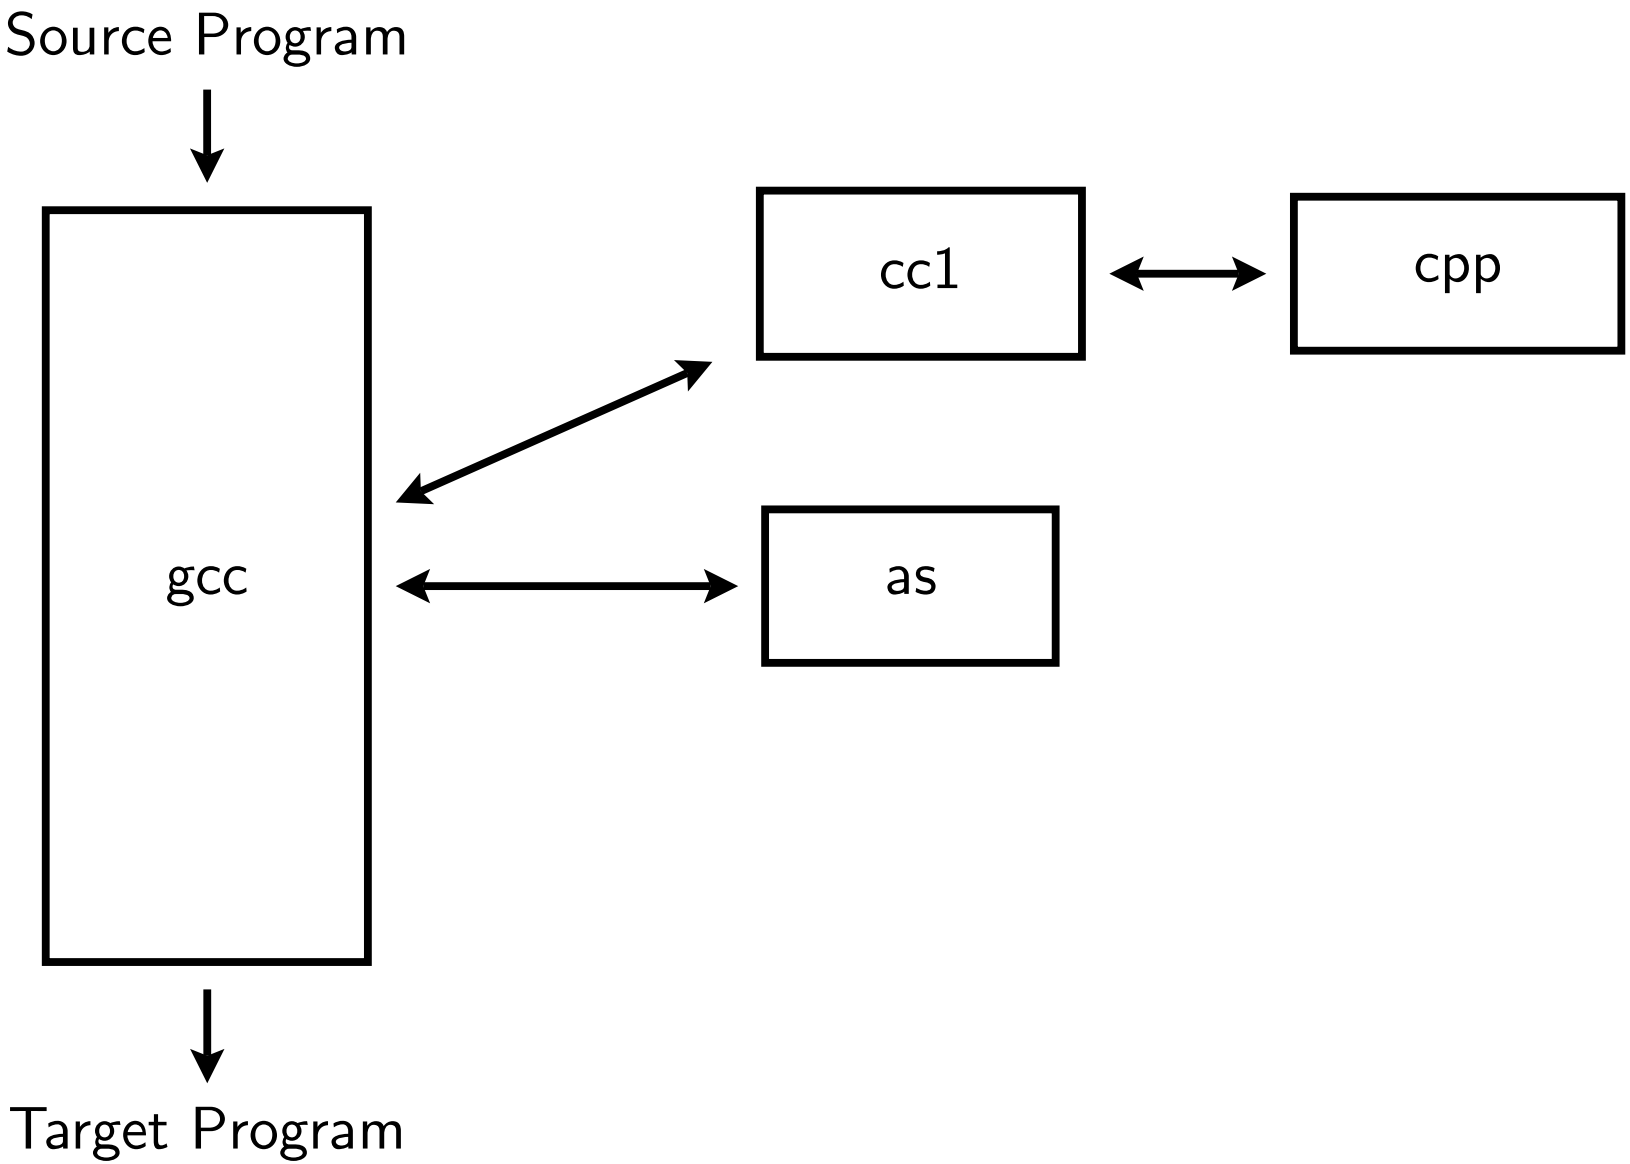
The Gnu Tool Chain



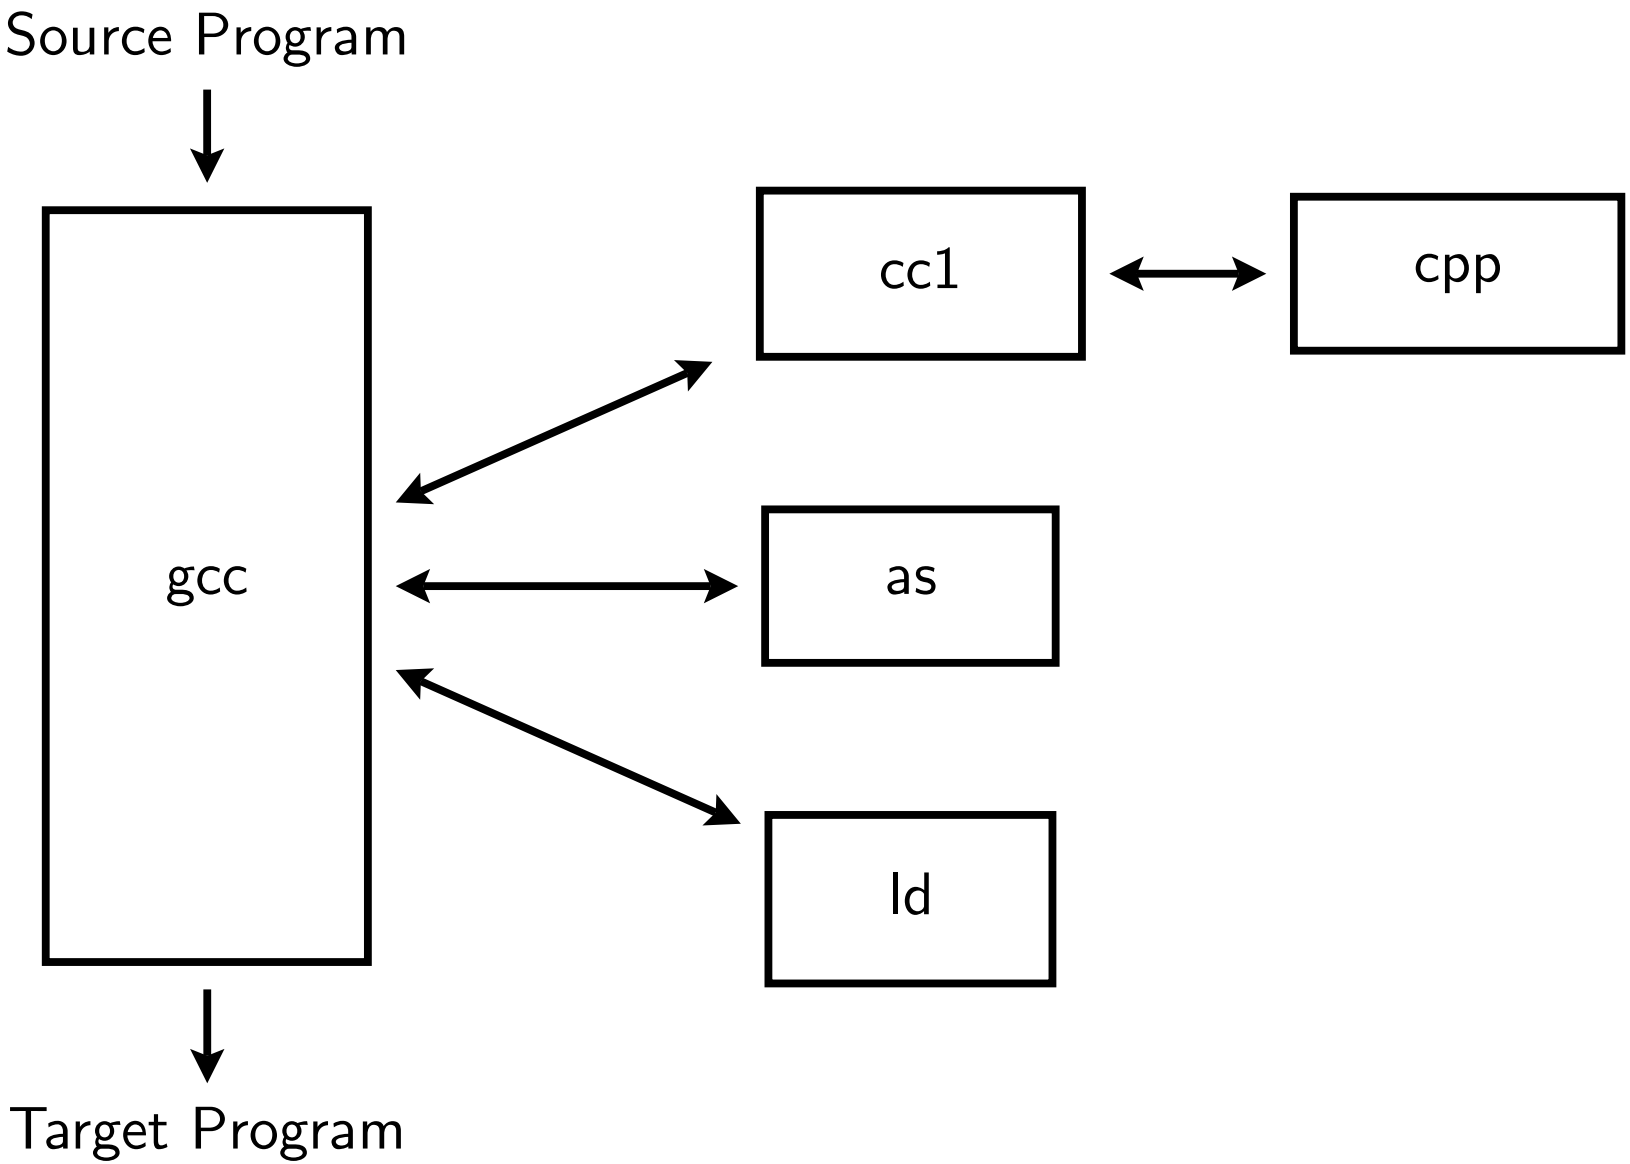
The Gnu Tool Chain



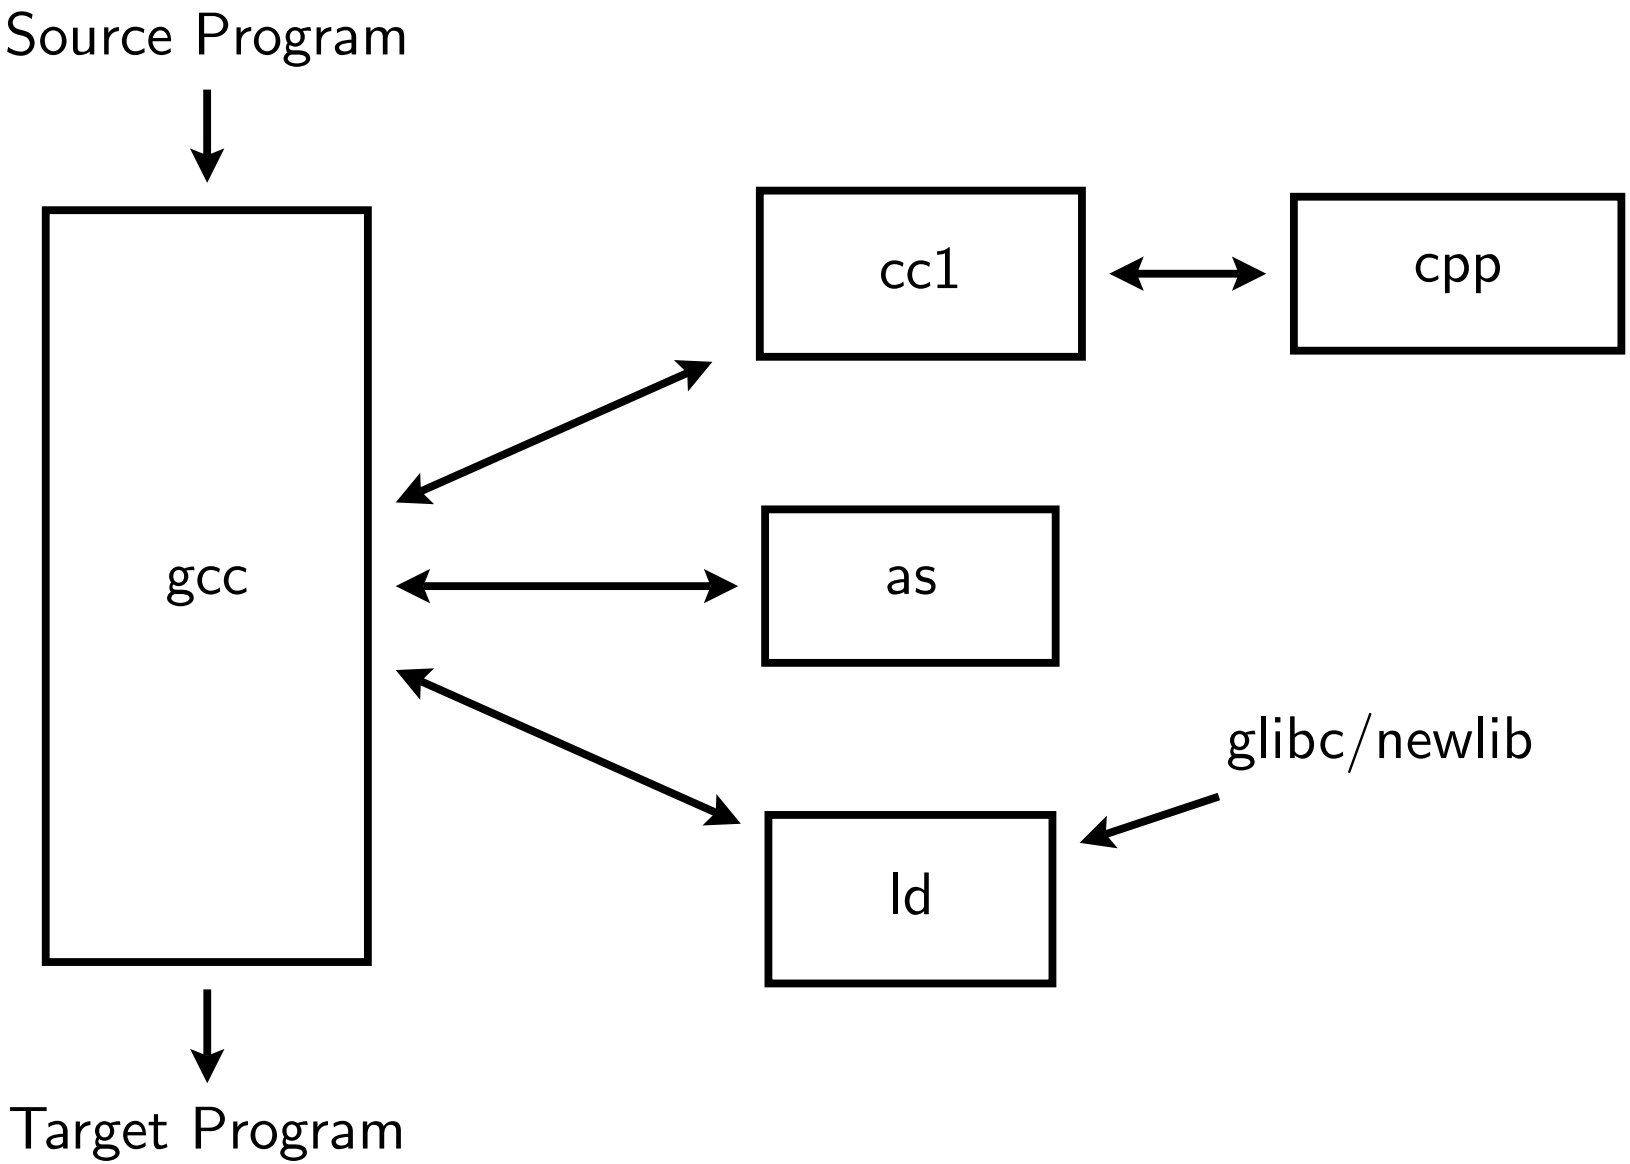
The Gnu Tool Chain



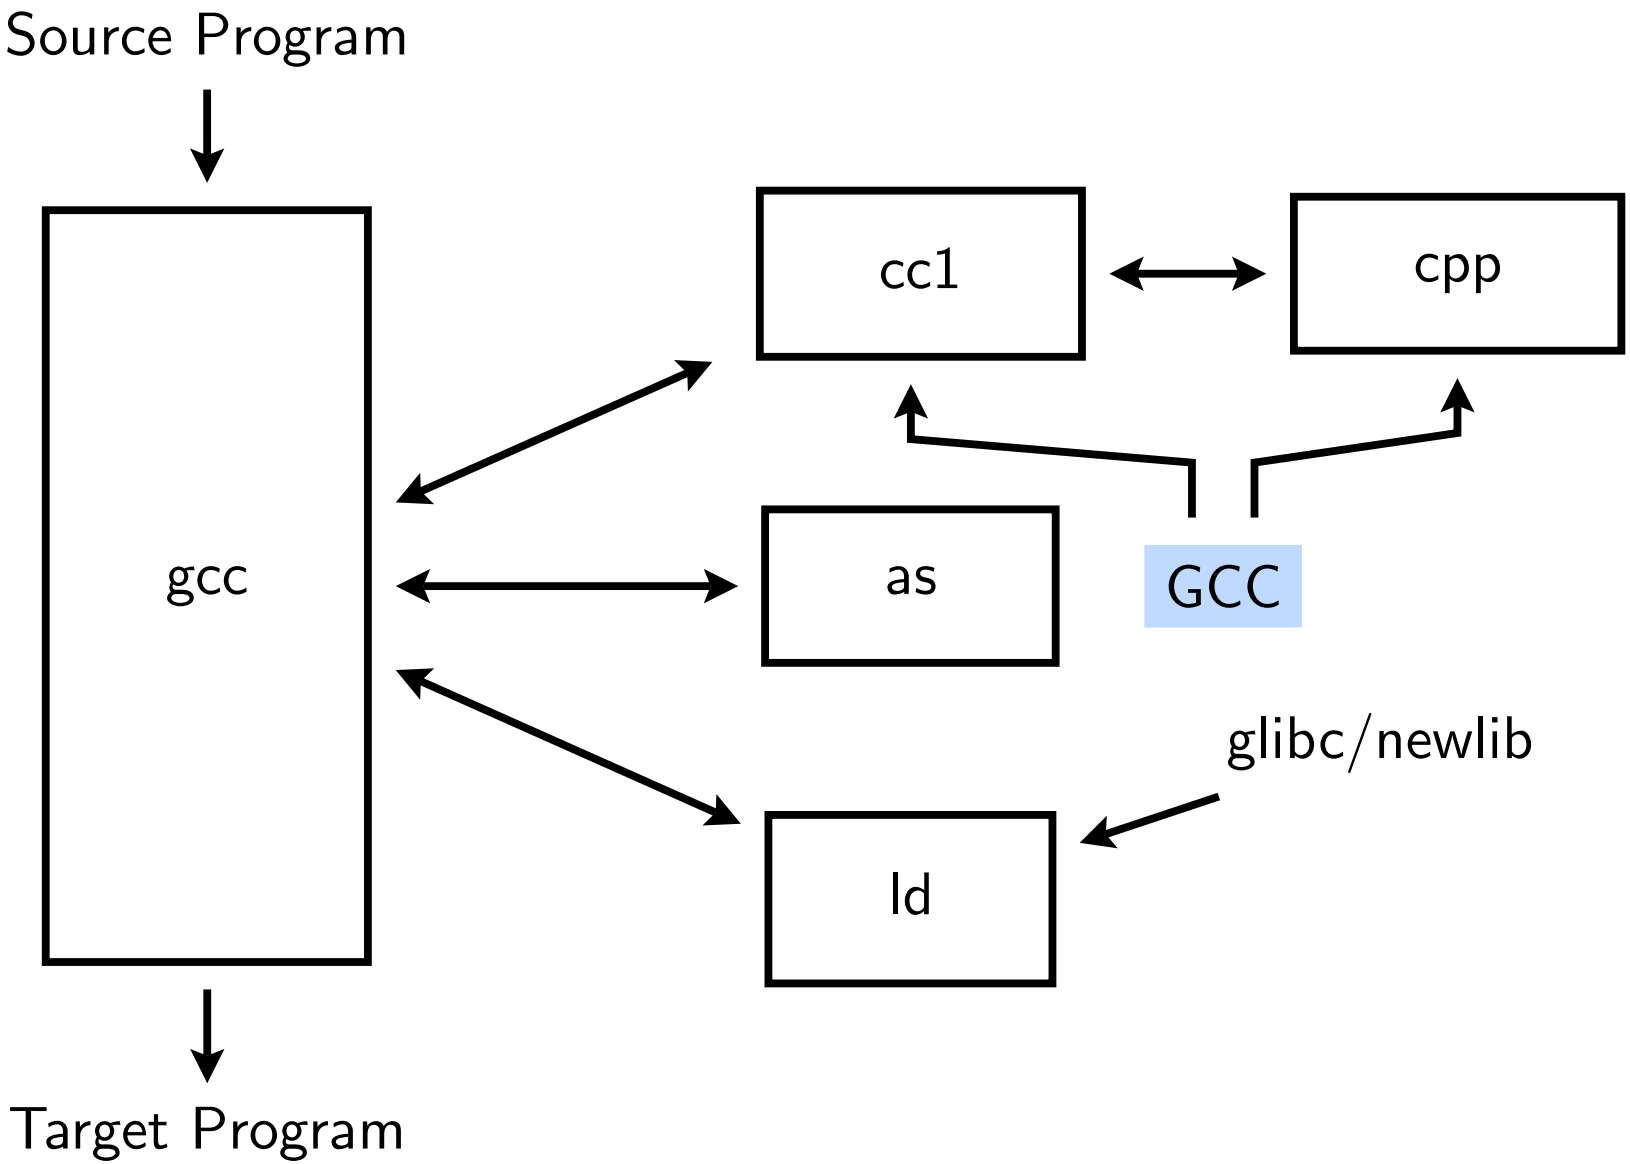
The Gnu Tool Chain



The Gnu Tool Chain



The Gnu Tool Chain



Why is Understanding GCC Difficult?

- Some of the obvious reasons:
  - *Comprehensiveness*
    GCC is a production quality framework in terms of completeness and practical usefulness
  - *Open development model*
    Could lead to heterogeneity. Design flaws may be difficult to correct
  - *Rapid versioning*
    GCC maintenance is a race against time. Disruptive corrections are difficult

Why is Understanding GCC Difficult?

- Deeper technical reasons:
  - GCC is not a compiler but a *compiler generation framework*
    Two distinct gaps that need to be bridged:
    - Input-output of the generation framework
    - Input-output of the generated compiler
  - GCC generated compiler uses a derivative of the Davidson-Fraser model of compilation
    - Early instruction selection
    - Machine dependent intermediate representation
    - Simplistic instruction selection and retargatibility mechanism

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha,
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM,
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR,
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin,
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12,
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300,
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86),
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64,
  - Lesser-known target processors:
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64,

- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000,
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R,
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11,
  - Additional processors independently supported:

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE,
  - Additional processors independently supported:

  - Additional processors independently supported:
    D10V, LatticeMico32, MeP,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze, MSP430,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze, MSP430, Nios II and Nios,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze, MSP430, Nios II and Nios, PDP-10,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze, MSP430, Nios II and Nios, PDP-10, TIGCC (m68k variant),

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze, MSP430, Nios II and Nios, PDP-10, TIGCC (m68k variant), Z8000,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze, MSP430, Nios II and Nios, PDP-10, TIGCC (m68k variant), Z8000, PIC24/dsPIC,

Comprehensiveness of GCC: Wide Applicability

- Input languages supported:
  C, C++, Objective-C, Objective-C++, Java, Fortran, and Ada
- Processors supported in standard releases:
  - Common processors:
    Alpha, ARM, Atmel AVR, Blackfin, HC12, H8/300, IA-32 (x86), x86-64, IA-64, Motorola 68000, MIPS, PA-RISC, PDP-11, PowerPC, R8C/M16C/M32C, SPU, System/390/zSeries, SuperH, SPARC, VAX
  - Lesser-known target processors:
    A29K, ARC, ETRAX CRIS, D30V, DSP16xx, FR-30, FR-V, Intel i960, IP2000, M32R, 68HC11, MCORE, MMIX, MN10200, MN10300, Motorola 88000, NS32K, ROMP, Stormy16, V850, Xtensa, AVR32
  - Additional processors independently supported:
    D10V, LatticeMico32, MeP, Motorola 6809, MicroBlaze, MSP430, Nios II and Nios, PDP-10, TIGCC (m68k variant), Z8000, PIC24/dsPIC, NEC SX architecture

Comprehensiveness of GCC: Size

Open Source and Free Software Development Model

The Cathedral and the Bazaar [Eric S Raymond, 1997]

Open Source and Free Software Development Model

The Cathedral and the Bazaar [Eric S Raymond, 1997]

- Cathedral: Total Centralized Control
  Design, implement, test, release

Open Source and Free Software Development Model

The Cathedral and the Bazaar [Eric S Raymond, 1997]

- Cathedral: Total Centralized Control
  Design, implement, test, release
- Bazaar: Total Decentralization
  Release early, release often, make users partners in software development

Open Source and Free Software Development Model

The Cathedral and the Bazaar [Eric S Raymond, 1997]

- Cathedral: Total Centralized Control
  Design, implement, test, release
- Bazaar: Total Decentralization
  Release early, release often, make users partners in software development

  "Given enough eyeballs, all bugs are shallow"

Open Source and Free Software Development Model

The Cathedral and the Bazaar [Eric S Raymond, 1997]

- Cathedral: Total Centralized Control
  Design, implement, test, release
- Bazaar: Total Decentralization
  Release early, release often, make users partners in software development

  "Given enough eyeballs, all bugs are shallow"
  Code errors, logical errors, and architectural errors

Open Source and Free Software Development Model

The Cathedral and the Bazaar [Eric S Raymond, 1997]

- Cathedral: Total Centralized Control
  Design, implement, test, release
- Bazaar: Total Decentralization
  Release early, release often, make users partners in software development

  "Given enough eyeballs, all bugs are shallow"
  Code errors, logical errors, and architectural errors

A combination of the two seems more sensible

The Current Development Model of GCC

GCC follows a combination of the Cathedral and the Bazaar approaches

- GCC Steering Committee: Free Software Foundation has given charge
  - Major policy decisions
  - Handling Administrative and Political issues
- Release Managers:
  - Coordination of releases
- Maintainers:
  - Usually area/branch/module specific
  - Responsible for design and implementation
  - Take help of reviewers to evaluate submitted changes

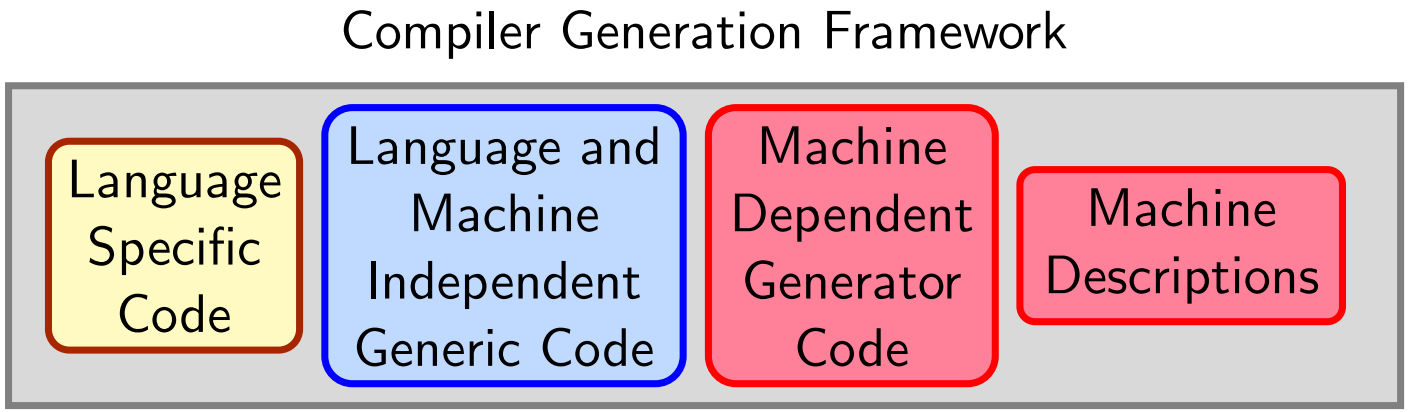
Why is Understanding GCC Difficult?

Deeper reason: GCC is not a *compiler* but a *compiler generation framework*

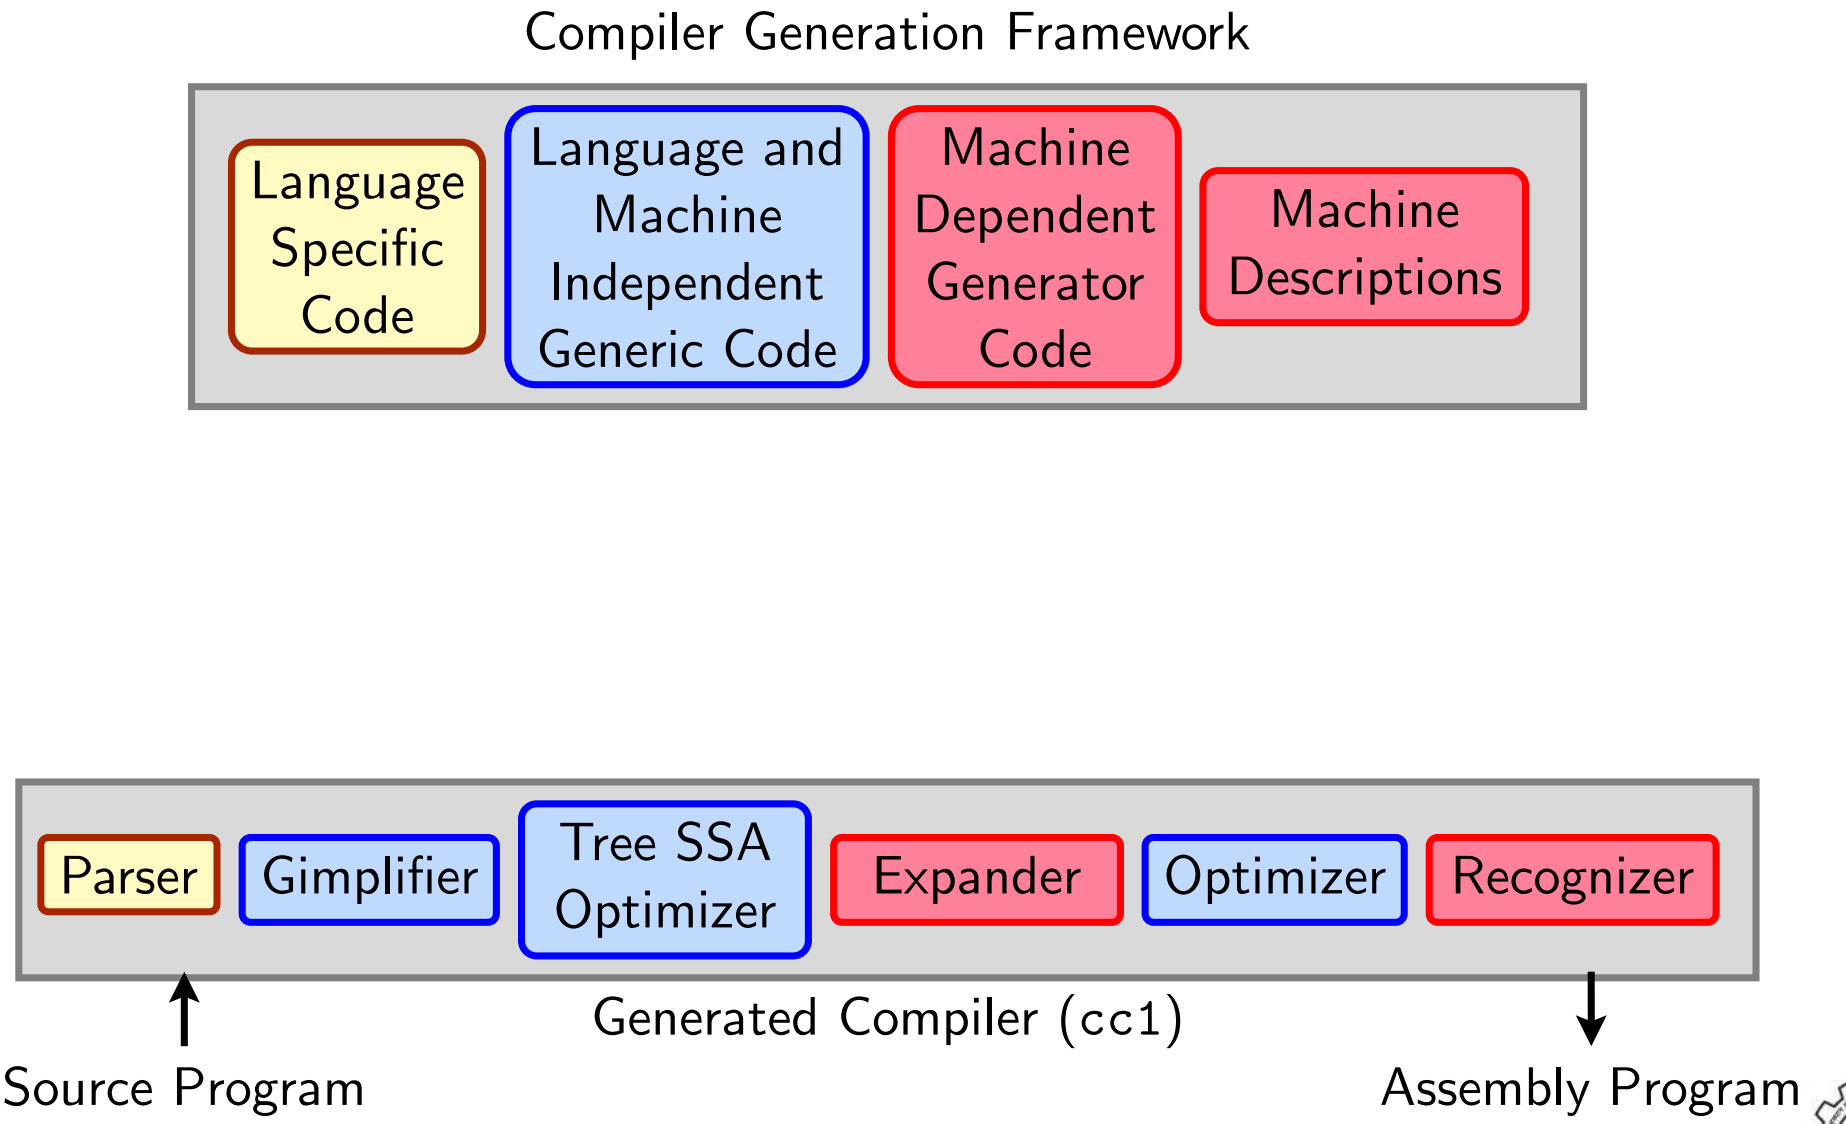
There are two distinct gaps that need to be bridged:

- Input-output of the generation framework: The target specification and the generated compiler
- Input-output of the generated compiler: A source program and the generated assembly program

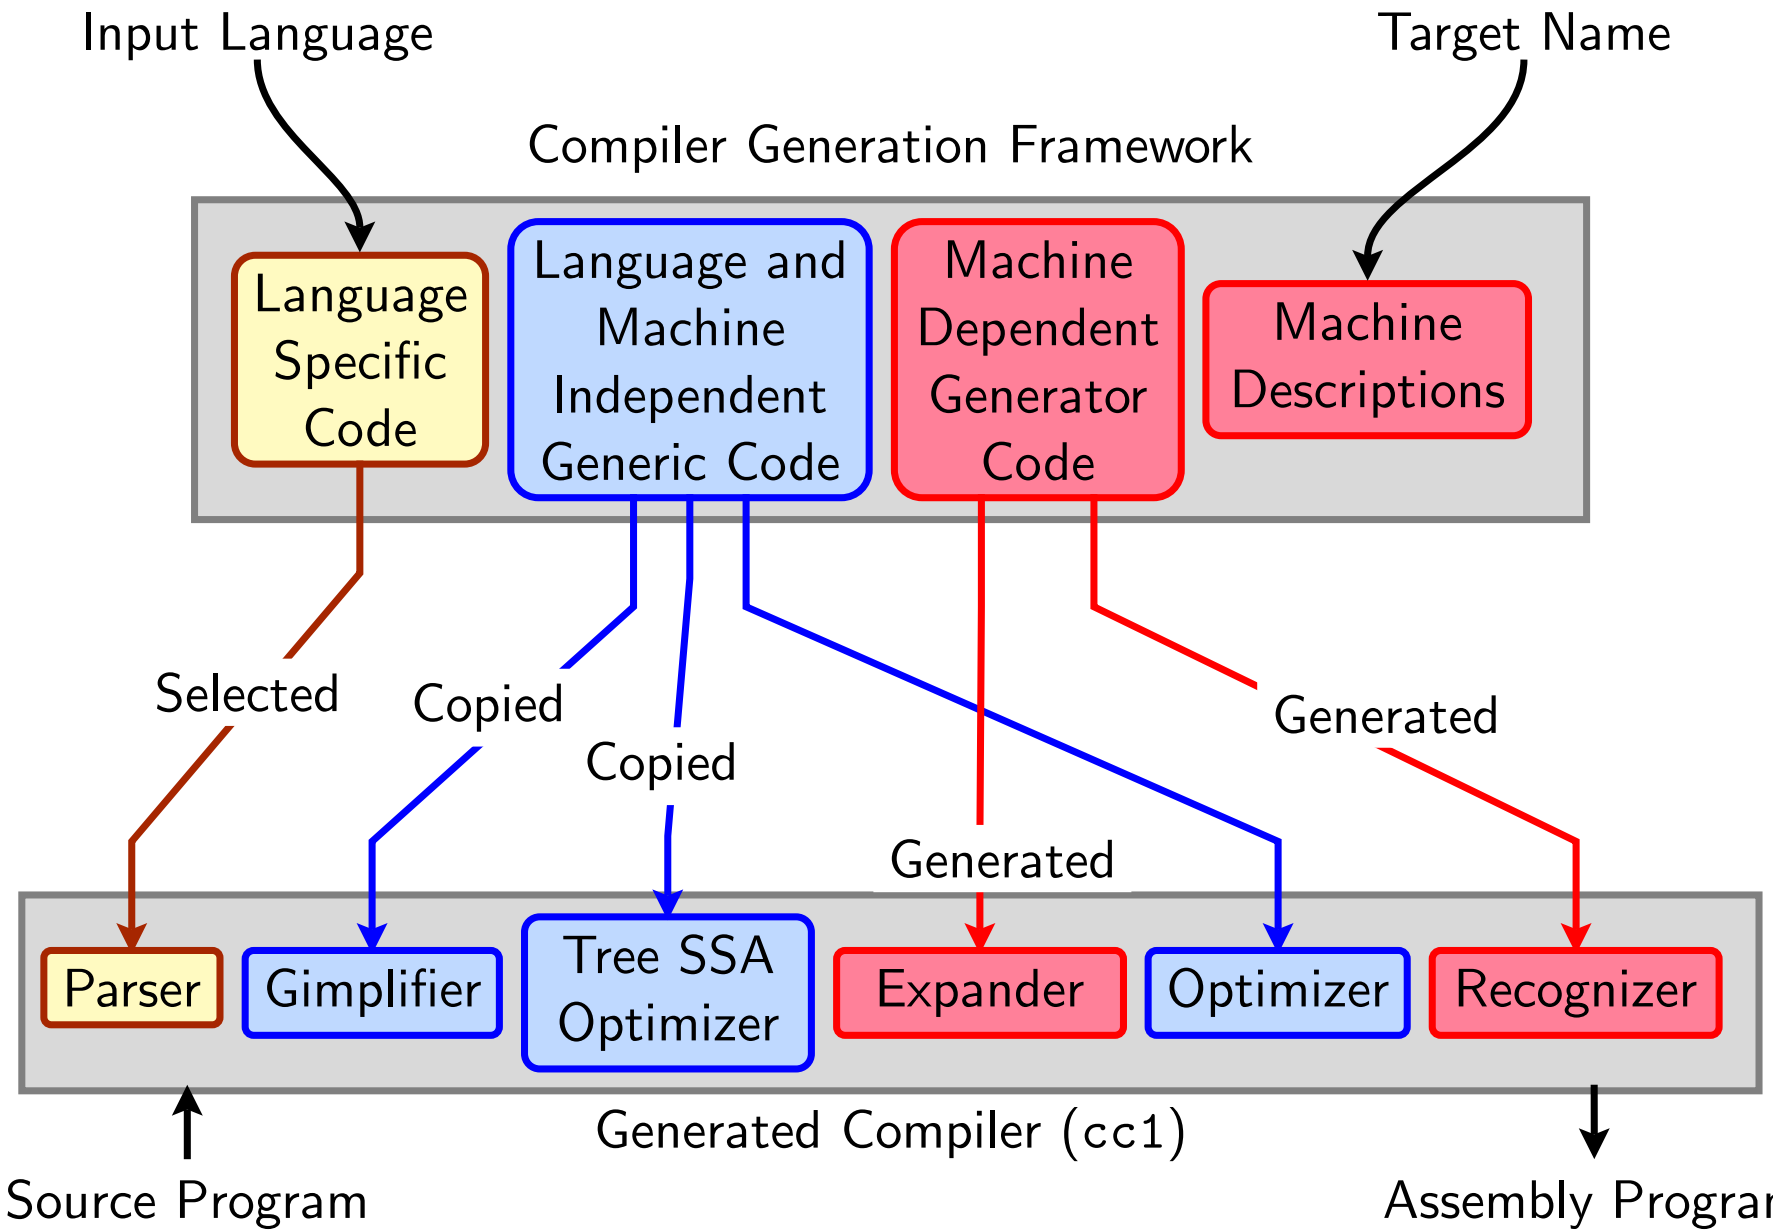
The Architecture of GCC



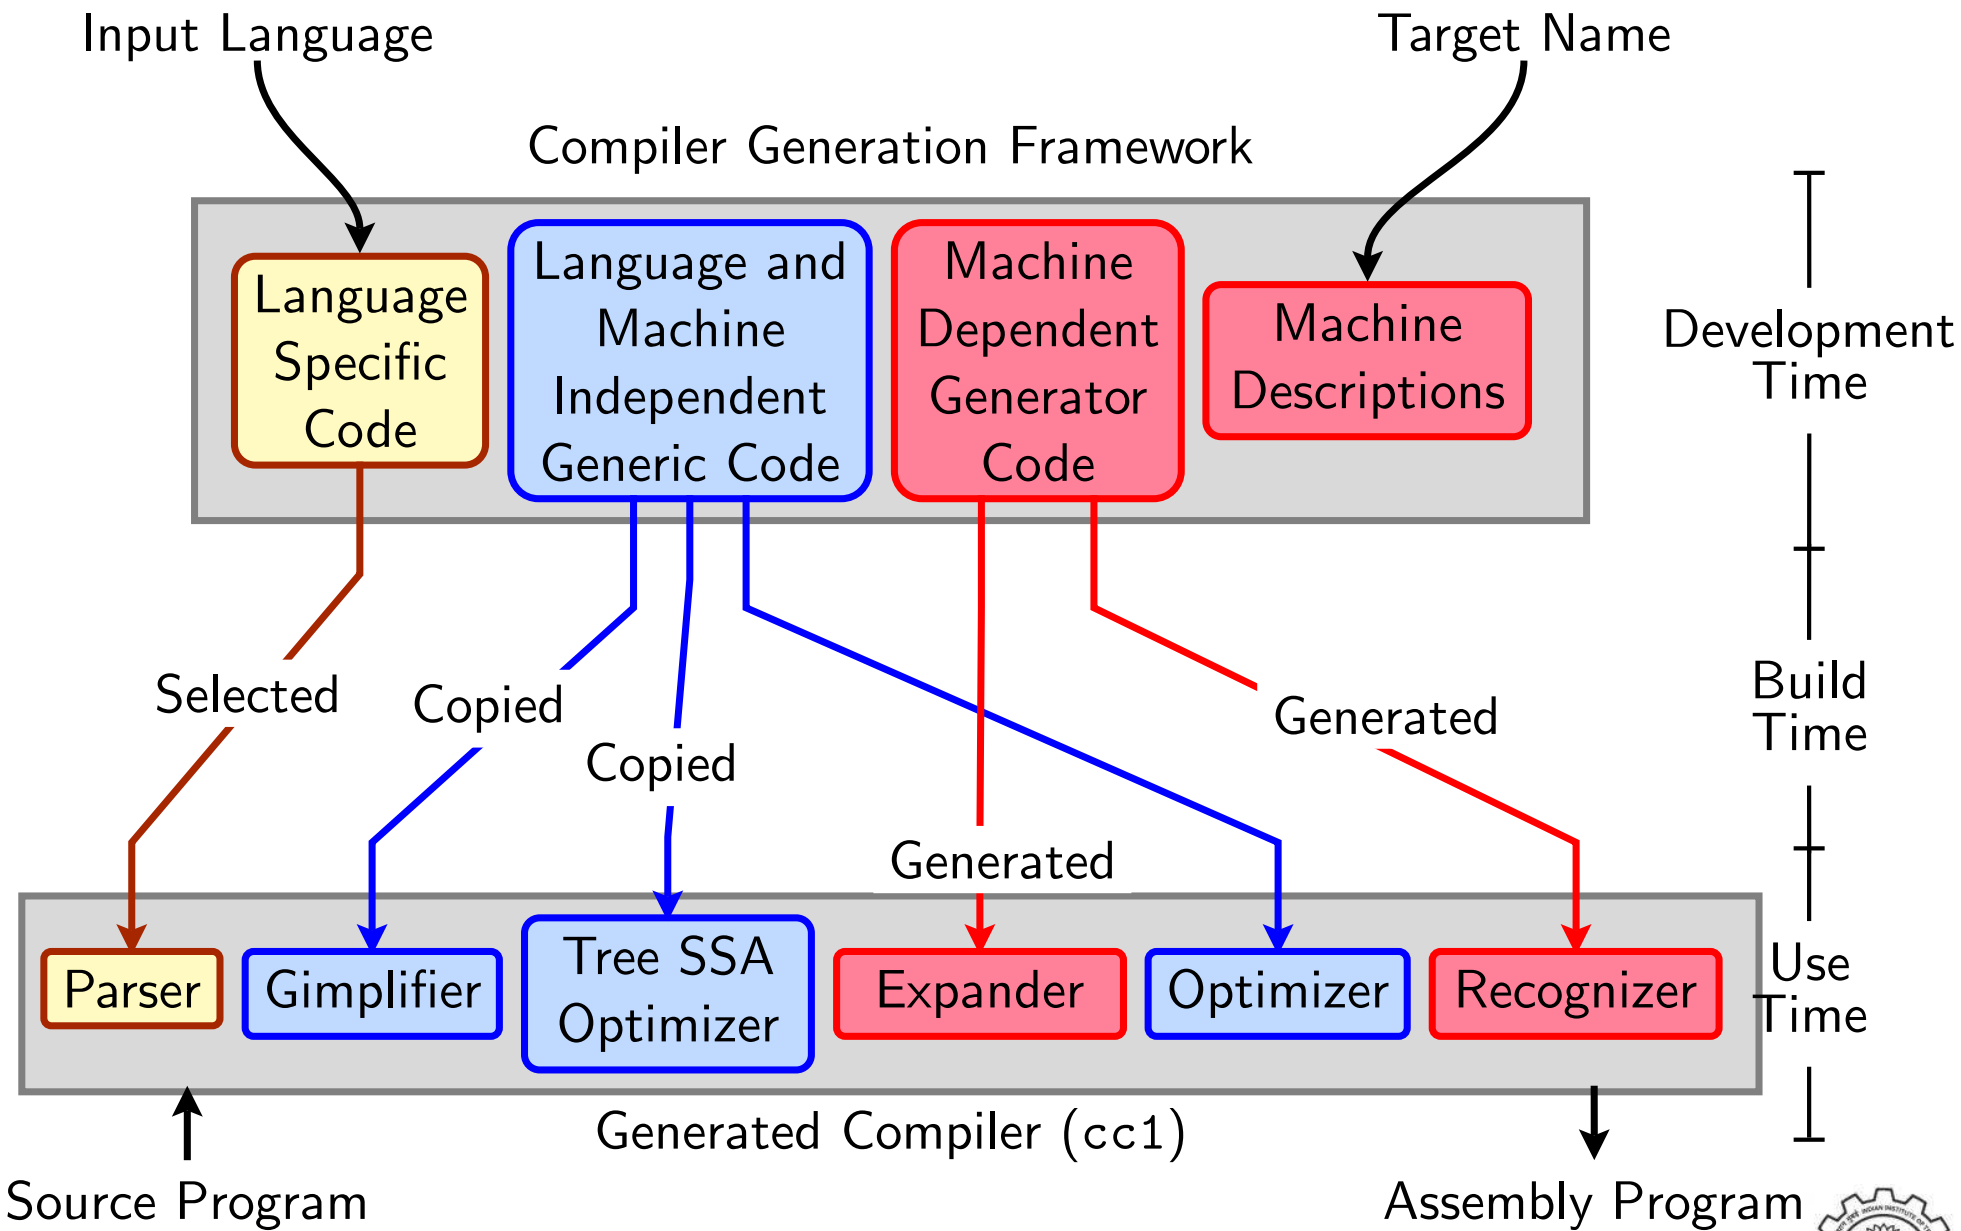
The Architecture of GCC



The Architecture of GCC



The Architecture of GCC



An Example of The Generation Related Gap

- Predicate function for invoking the loop distribution pass

```
static bool
gate_tree_loop_distribution (void)
{
  return flag_tree_loop_distribution != 0;
}
```

An Example of The Generation Related Gap

- Predicate function for invoking the loop distribution pass

```
static bool
gate_tree_loop_distribution (void)
{
  return flag_tree_loop_distribution != 0;
}
```

- There is no declaration of or assignment to variable `flag_tree_loop_distribution` in the entire source!

An Example of The Generation Related Gap

- Predicate function for invoking the loop distribution pass

```
static bool
gate_tree_loop_distribution (void)
{
  return flag_tree_loop_distribution != 0;
}
```

- There is no declaration of or assignment to variable `flag_tree_loop_distribution` in the entire source!
- It is described in `common.opt` as follows

```
ftree-loop-distribution
Common Report Var(flag_tree_loop_distribution) Optimization
Enable loop distribution on trees
```

An Example of The Generation Related Gap

- Predicate function for invoking the loop distribution pass

```
static bool
gate_tree_loop_distribution (void)
{
  return flag_tree_loop_distribution != 0;
}
```

- There is no declaration of or assignment to variable `flag_tree_loop_distribution` in the entire source!
- It is described in `common.opt` as follows

```
ftree-loop-distribution
Common Report Var(flag_tree_loop_distribution) Optimization
Enable loop distribution on trees
```

- The required C statements are generated during the build

Another Example of The Generation Related Gap

Locating the `main` function in the directory `gcc-4.5.0/gcc` using cscope

Another Example of The Generation Related Gap

Locating the `main` function in the directory `gcc-4.5.0/gcc` using cscope

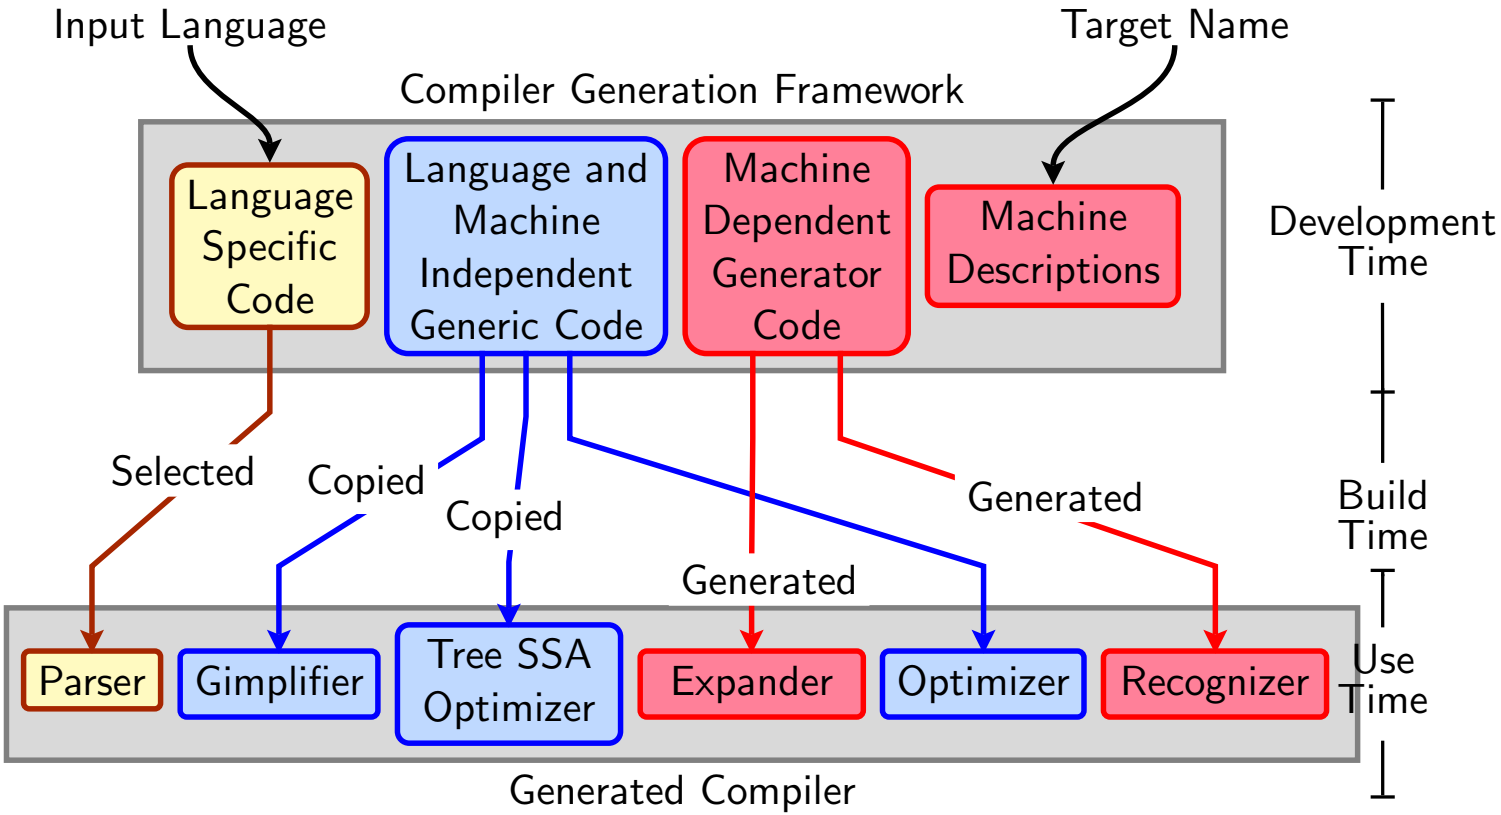
```
  File              Line
0 collect2.c        1111 main (int argc, char **argv)
1 fp-test.c           85 main (void )
2 gcc.c             6803 main (int argc, char **argv)
3 gcov-dump.c         76 main (int argc ATTRIBUTE_UNUSED, char **argv
4 gcov-iov.c          29 main (int argc, char **argv)
5 gcov.c             355 main (int argc, char **argv)
6 genattr.c           89 main (int argc, char **argv)
7 genattrtab.c      4439 main (int argc, char **argv)
8 genautomata.c     9475 main (int argc, char **argv)
9 genchecksum.c       67 main (int argc, char ** argv)
a gencodes.c          51 main (int argc, char **argv)
b genconditions.c    209 main (int argc, char **argv)
c genconfig.c        261 main (int argc, char **argv)
d genconstants.c      50 main (int argc, char **argv)
e genemit.c          825 main (int argc, char **argv)
f genextract.c       401 main (int argc, char **argv)
```

Another Example of The Generation Related Gap

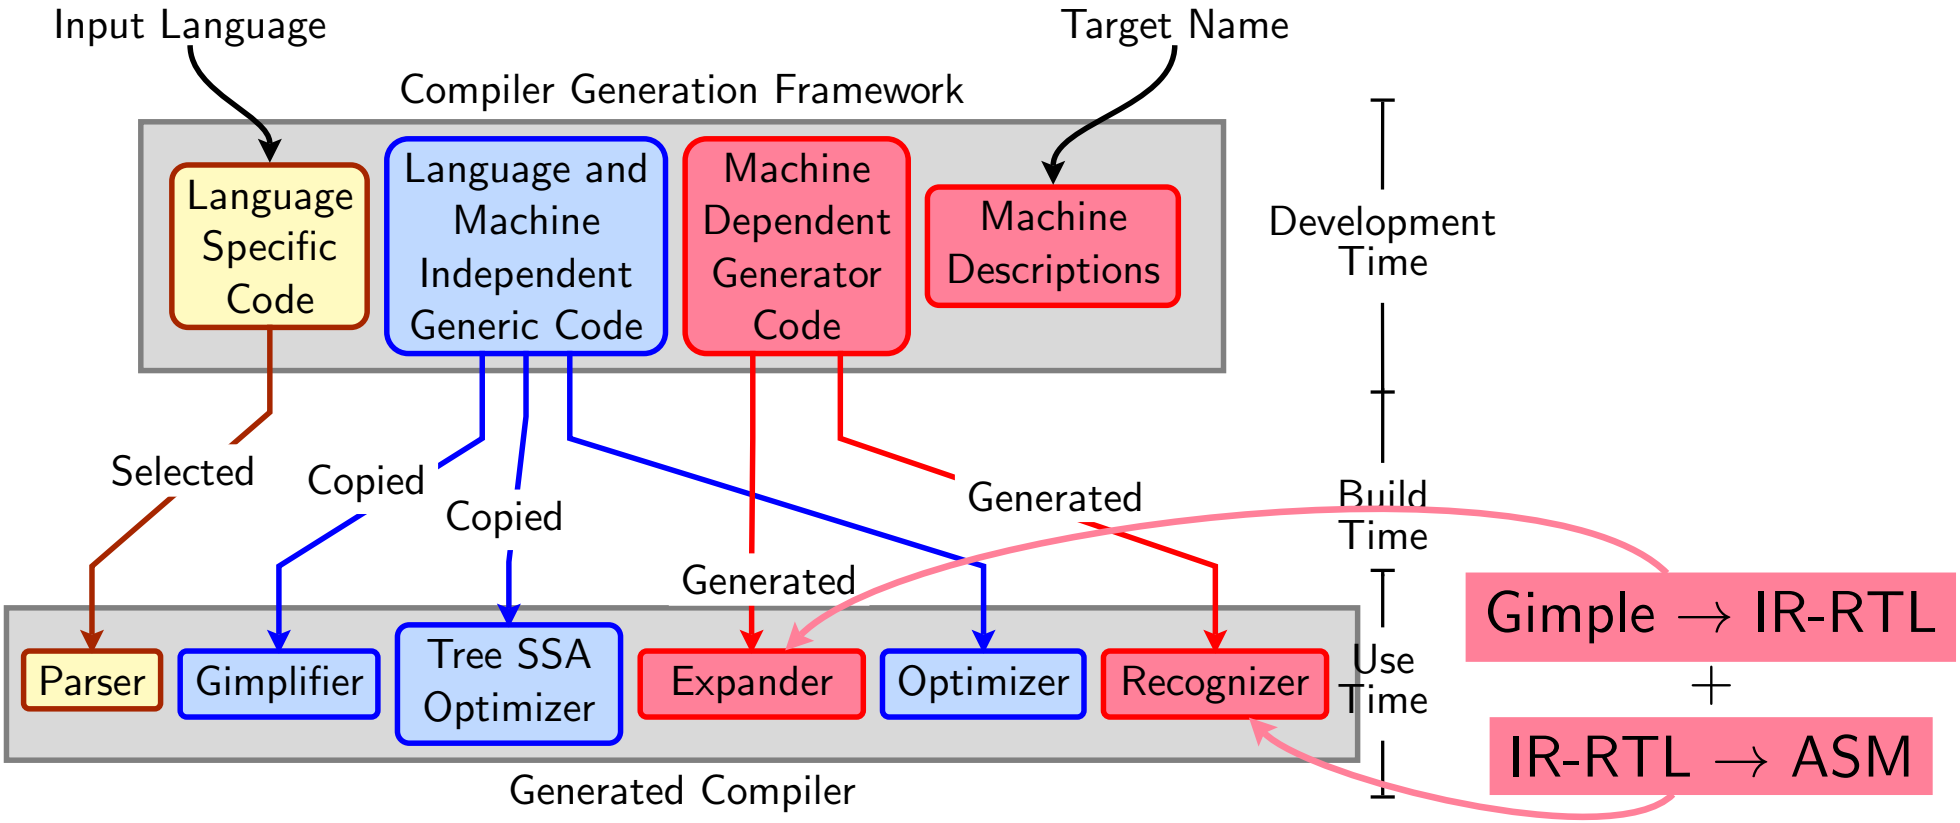
Locating the `main` function in the directory `gcc-4.5.0/gcc` using cscope

```
  File              Line
g genflags.c         250 main (int argc, char **argv)
h gengenrtl.c        350 main (int argc, char **argv)
i gengtype.c        3694 main (int argc, char **argv)
j genmddeps.c         45 main (int argc, char **argv)
k genmodes.c        1376 main (int argc, char **argv)
l genopinit.c        469 main (int argc, char **argv)
m genoutput.c       1023 main (int argc, char **argv)
n genpeep.c          353 main (int argc, char **argv)
o genpreds.c        1404 main (int argc, char **argv)
p genrecog.c        2722 main (int argc, char **argv)
q lto-wrapper.c      412 main (int argc, char *argv[])
r main.c              33 main (int argc, char **argv)
s mips-tdump.c      1393 main (int argc, char **argv)
t mips-tfile.c       655 main (void )
u mips-tfile.c      4695 main (int argc, char **argv)
v tlink.c             61 const char *main;
```

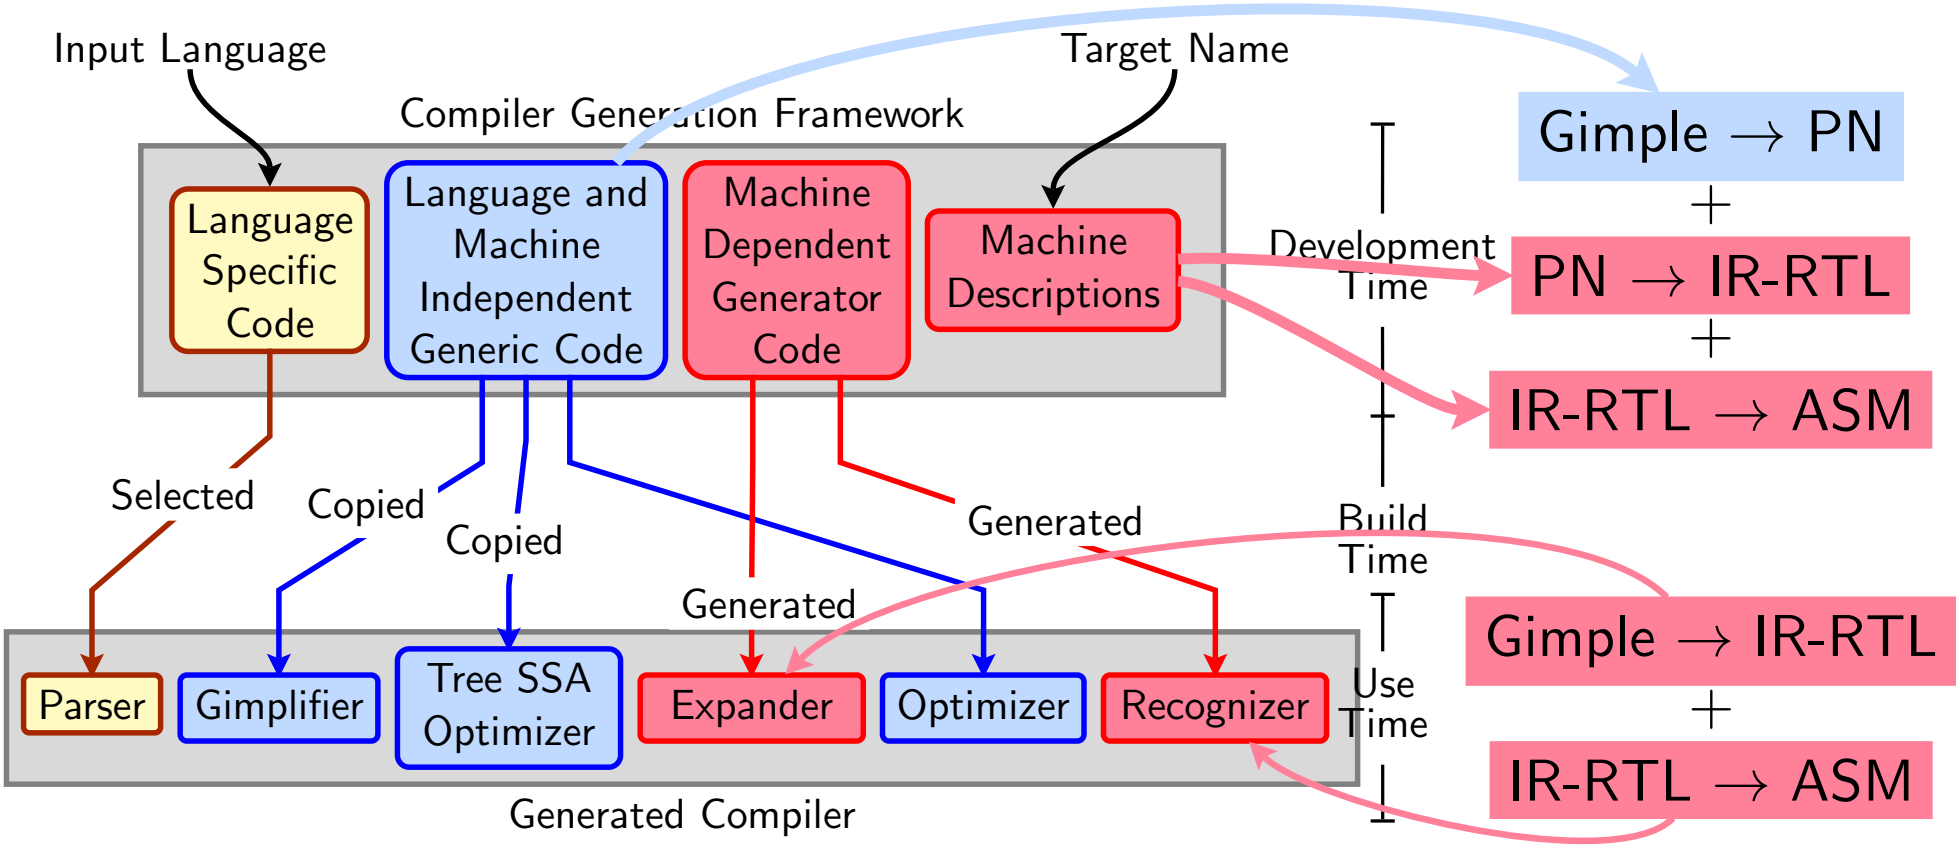
GCC Retargetability Mechanism



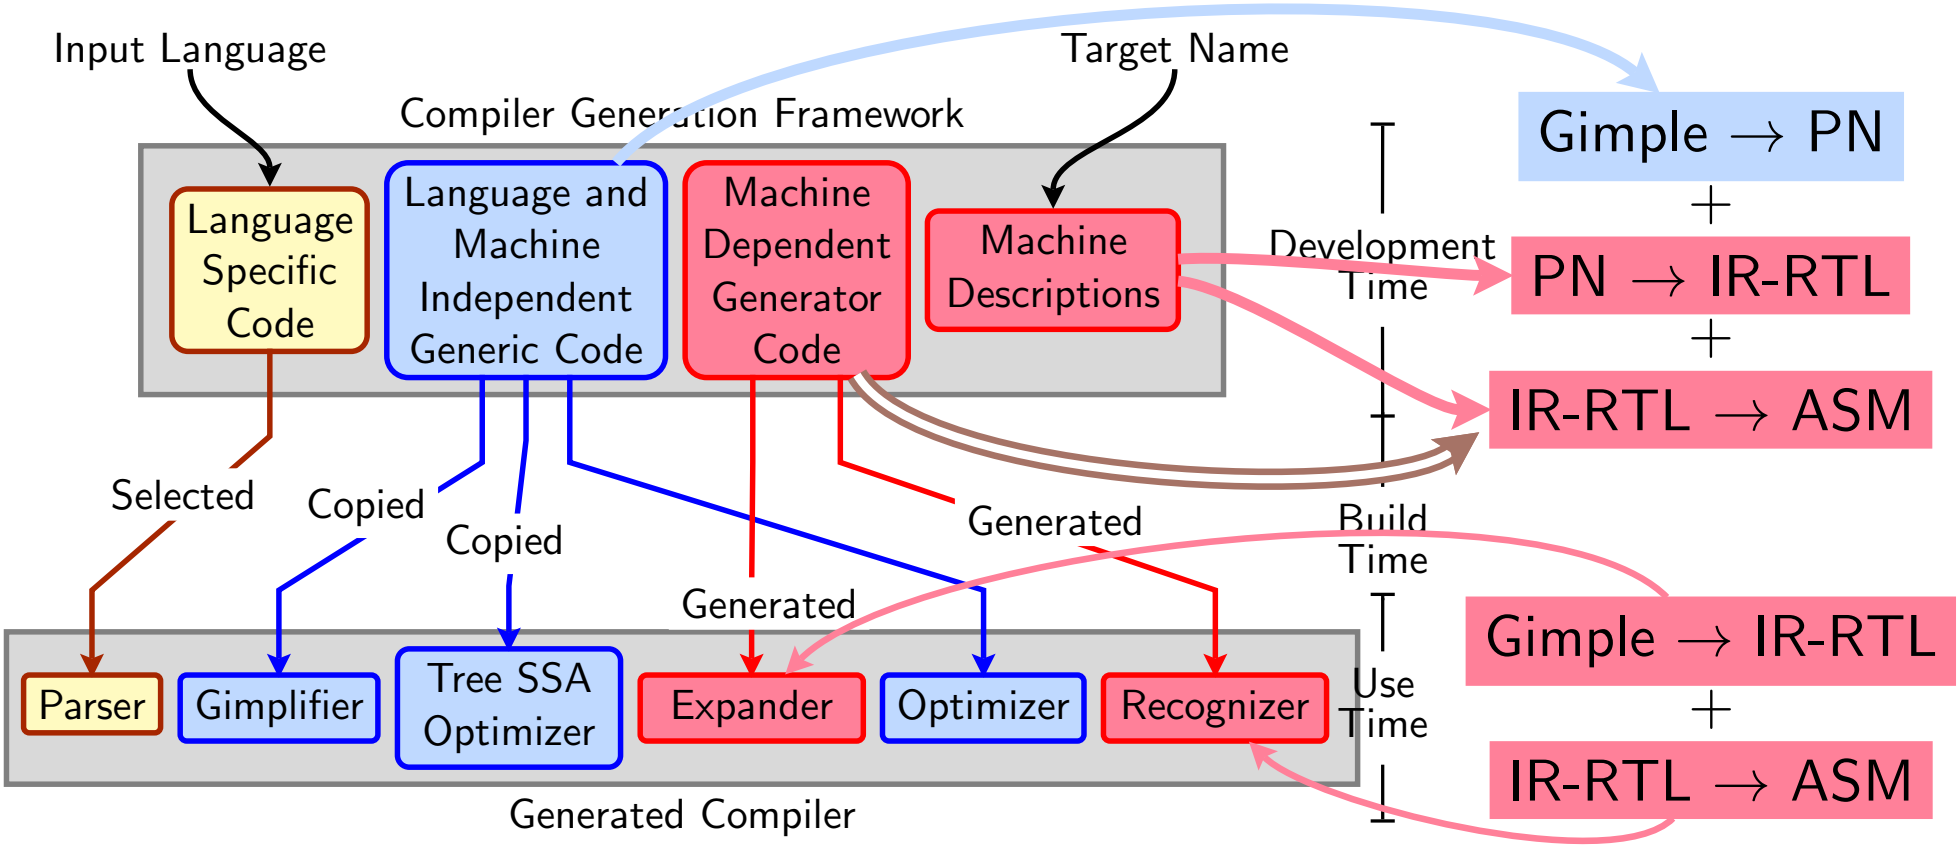
GCC Retargetability Mechanism



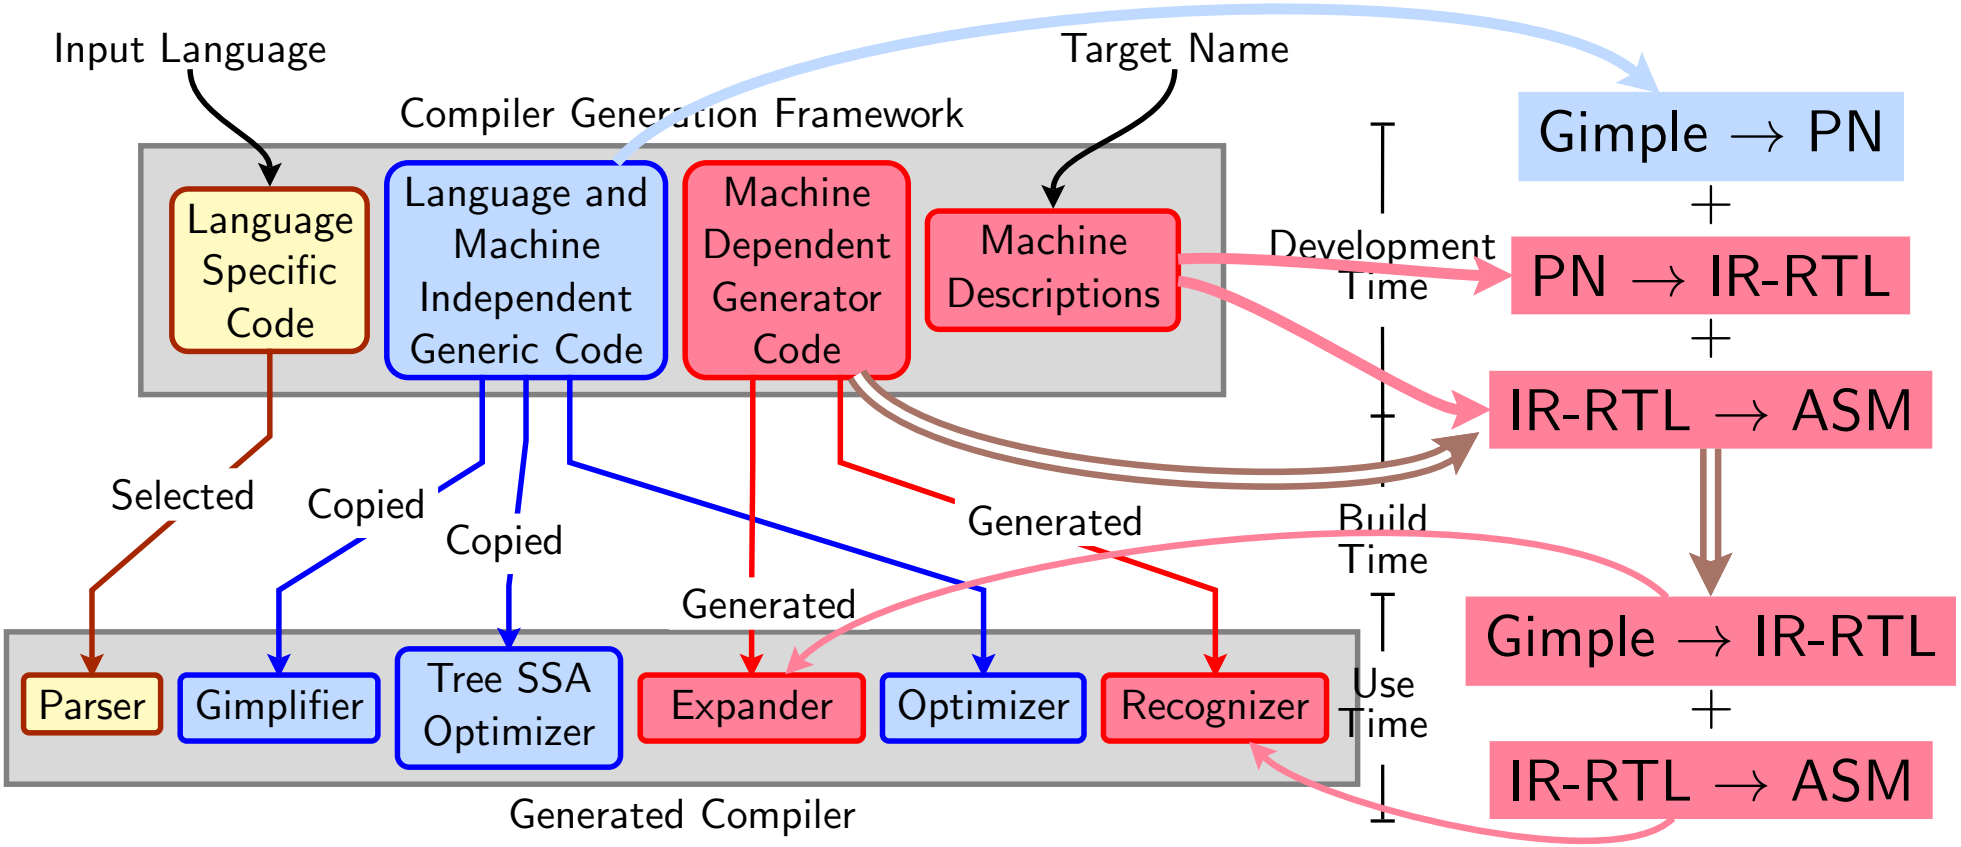
GCC Retargetability Mechanism



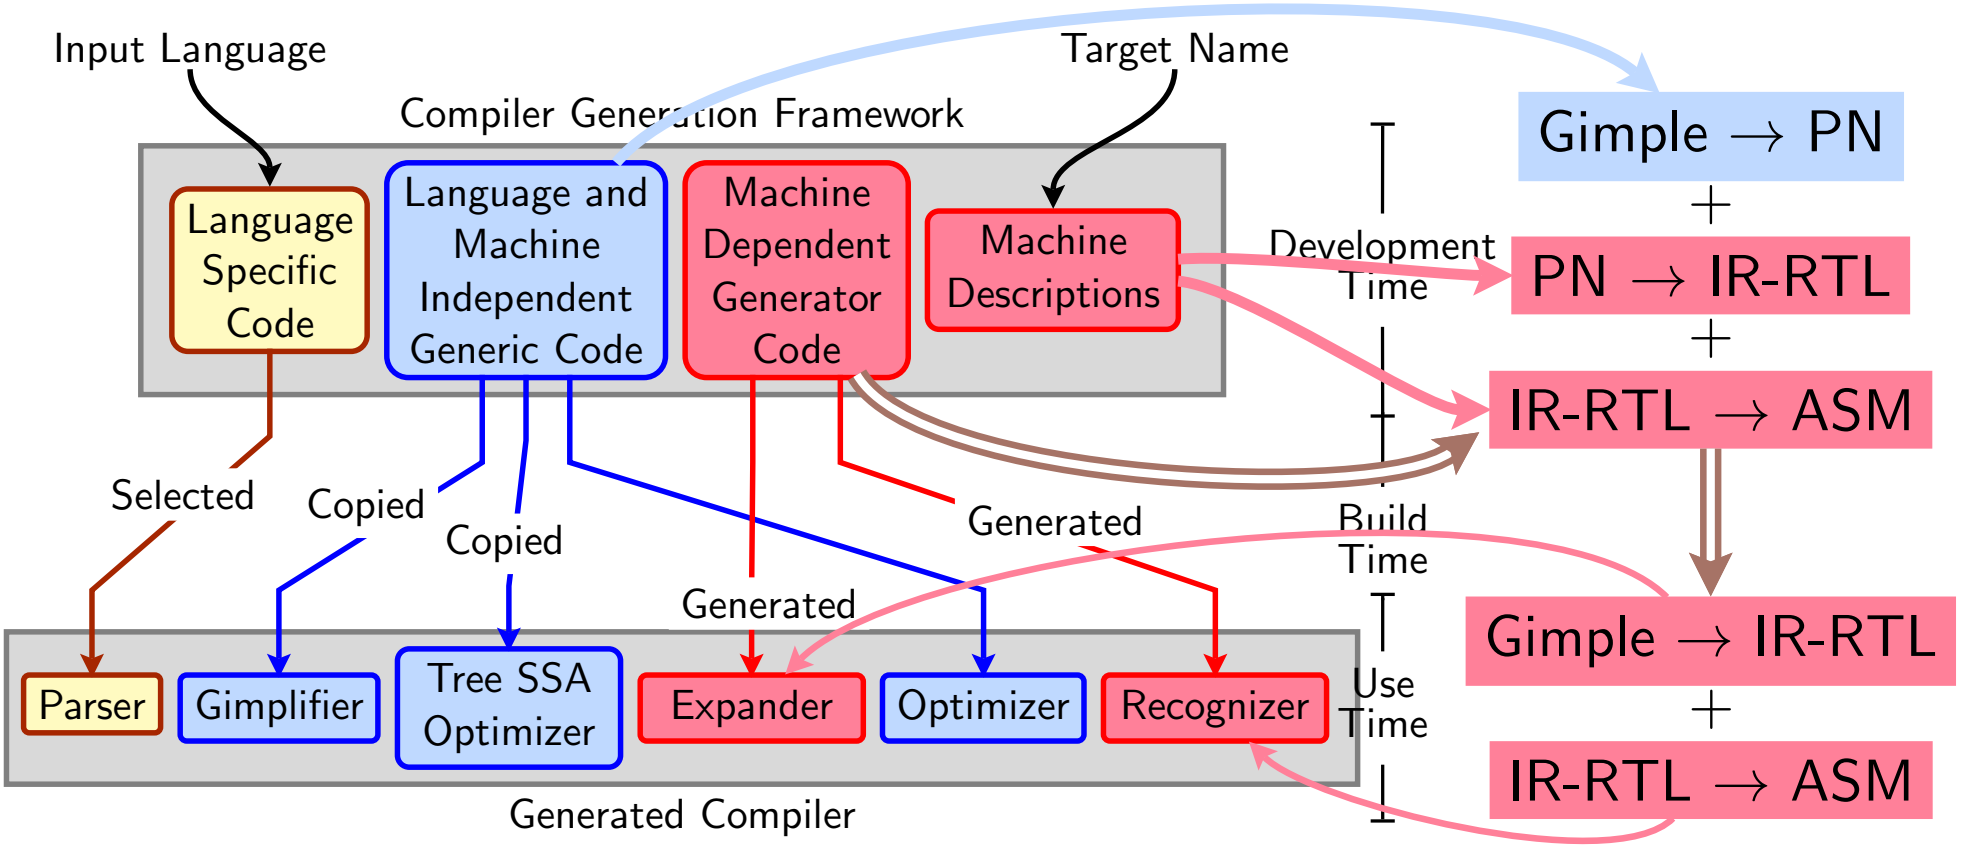
GCC Retargetability Mechanism



GCC Retargetability Mechanism



GCC Retargetability Mechanism



The generated compiler uses an adaptation of the Davison Fraser model

- Generic expander and recognizer
- Machine specific information is isolated in data structures
- Generating a compiler involves generating these data structures

The GCC Challenge: Poor Retargetability Mechanism

Symptoms:

- Machine descriptions are large, verbose, repetitive, and contain large chunks of C code
  Size in terms of line counts

Files	i386	mips
*.md	35766	12930
*.c	28643	12572
*.h	15694	5105

The GCC Challenge: Poor Retargetability Mechanism

Symptoms:

- Machine descriptions are large, verbose, repetitive, and contain large chunks of C code
  Size in terms of line counts

Files	i386	mips
*.md	35766	12930
*.c	28643	12572
*.h	15694	5105

- Machine descriptions are difficult to construct, understand, debug, and enhance

Part 5

Meeting the GCC Challenge

Meeting the GCC Challenge

Goal of Understanding	Methodology	Needs Examining		
		Makefiles	Source	MD
Translation sequence of programs	Gray box probing	No	No	No
Build process	Customizing the configuration and building	Yes	No	No
Retargetability issues and machine descriptions	Incremental construction of machine descriptions	No	No	Yes
IR data structures and access mechanisms	Adding passes to massage IRs	No	Yes	Yes
Retargetability mechanism		Yes	Yes	Yes

What is Gray Box Probing of GCC?

- Black Box probing:
  Examining only the input and output relationship of a system
- White Box probing:
  Examining internals of a system for a given set of inputs
- Gray Box probing:
  Examining input and output of various components/modules
  - Overview of translation sequence in GCC
  - Overview of intermediate representations
  - Intermediate representations of programs across important phases

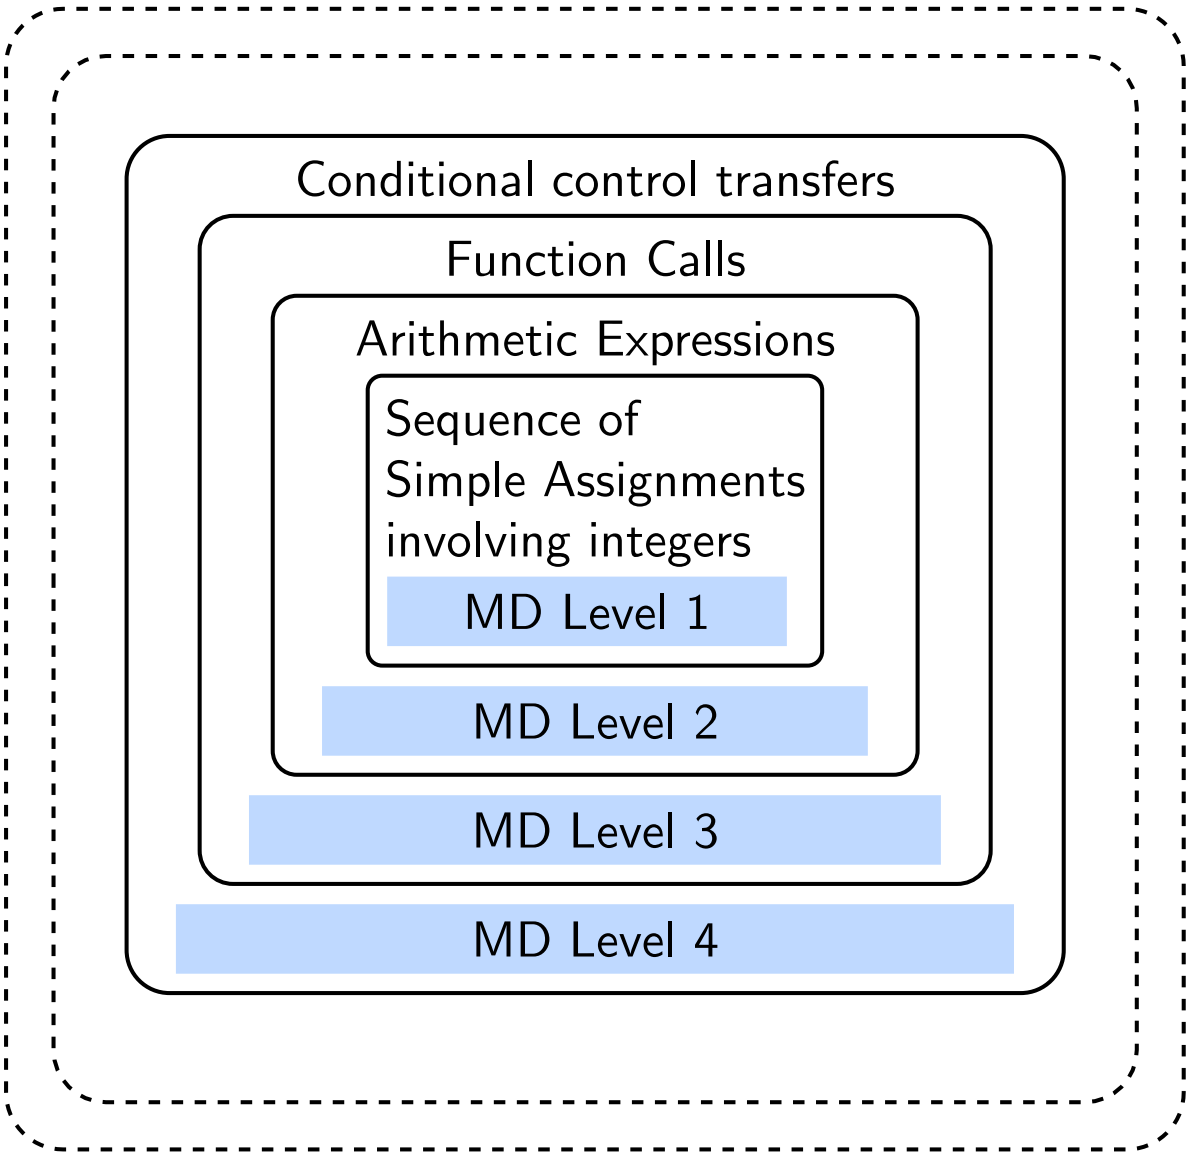
Customizing the Configuration and Build Process

- Creating only `cc1`
- Creating bare metal cross build
  Complete tool chain without OS support
- Creating cross build with OS support

Incremental Construction of Machine Descriptions

- Define different levels of source language
- Identify the minimal set of features in the target required to support each level
- Identify the minimal information required in the machine description to support each level
  - Successful compilation of any program, and
  - correct execution of the generated assembly program
- Interesting observations
  - It is the increment in the source language which results in understandable increments in machine descriptions rather than the increment in the target architecture
  - If the levels are identified properly, the increments in machine descriptions are monotonic

Incremental Construction of Machine Descriptions



Adding Passes to Massage IRs

- Understanding the pass structure
- Understanding the mechanisms of traversing a call graph and a control flow graph
- Understanding how to access the data structures of IRs
- Simple exercises such as:
  - Count the number of copy statements in a program
  - Count the number of variables declared "const" in the program
  - Count the number of occurances of arithmatic operators in the program
  - Count the number of references to global variables in the program

CS 715 Coverage

Goal of Understanding	Methodology	Needs Examining		
		Makefiles	Source	MD
Translation sequence of programs	Gray box probing	No	No	No
Build process	Customizing the configuration and building	Yes	No	No
Retargetability issues and machine descriptions	Incremental construction of machine descriptions	No	No	Yes
IR data structures and access mechanisms	Adding passes to massage IRs	No	Yes	Yes
Retargetability mechanism		Yes	Yes	Yes

CS 715 Coverage

- An external view of GCC:
  - Configuration and building
  - Gray box probing of GCC
  - Introduction to Gimple and RTL IRs
  - Parallelization and vectorization in GCC
  - Introduction to GCC Machine Decriptions
- An internal view of GCC: Walking the maze of GCC source code
  - Control flow and plugin structure of the core compiler,
  - Mechanisms for hooking up front ends, IR passes, and back ends
  - Examining and manipulating Gimple and RTL IRs
  - Design and implementation of GDFA
  - Machine descriptions and retargetability mechanism

CS 715 Philosophy

Twin goals:

- *Learning how to learn GCC*

  Our focus will be on
  - giving you some core information
  - showing you how to discover more information
- *Striking a balance between theory and practice*

  Our focus will be on showing you how to
  - discover concepts in a large code base and build abstractions
  - take concepts and update a large code base
  - relate the class room concepts of complilers to an industry strength compiler

CS 715 Pedagogy

- Introductory lecture for each topic followed by lab work
- Many the lecture hours will be used as lab hours
  - We will meet a one place (NSL? GRC?)
    You are expected to do ssh to your own machine
  - Class room as labs using your laptops?
- Tools
  shell, make, cscope, ctags, gdb/ddd, screen, spim (mips simulator)

CS 715 Lab Work

- Lab exercises:
  - Pre-defined experiments
  - Ungraded
- Assignments: Graded lab work
  - Implementation to modify gcc
  - Graded
  - To be submitted in about a couple of weeks or 10 days
- Projects
  - Specific Study + Implementation
  - Graded
  - To be submitted in about a couple of months
  - Possible topics
    Extensions of GDFA, MD rewriting with newer constructs, Detailing the retargetability mechanism, MD parsers, garbage collection, MELT, investigating specific optimizations (such as constant splitting)

CS 715 Assessment Scheme

- No written examination
- Marks for lab work

Head	Number	Weightage
Assignments	4	$4 \times 15 = 60$
Project	1	40
Total		100

- Assignments need not be same for all students
  However, they will be comparable and students would have the choice of opting for a particular assignment
