Generate Useful Statistics "Show me a digest of whatever happened today"

"Show me all people wearing yellow shirt" "Alert me as soon as you see a man with covered face"

"Number of people in the video" "Motion graph" "Heat map" A Multi-Faceted Video Summarization System: Tradeoff Between Diversity, Representation, Coverage and Importance (WACV 2019)

- Extractive, Query-based, Entity or Concept based
- In a surveillance video, diversity is more important, while in a movie, coverage and representation becomes more important

Learning From Less Data: A Unified Data Subset Selection and Active Learning Framework for Computer Vision (WACV 2019)

Deep Models are used everywhere today!

Increased Model Complexity Increased Computing Resources
 Increased Labeling Cost
 Increased Turn Around Time

1. Supervised Data Selection for **Quick Training/Inference** 

- 2. Supervised Data Selection for **Quick Hyper-parameter tuning**
- 3. Unsupervised Data Selection for Labeling from Video Data
- 4. Diversified Active Learning

#### A Framework towards Domain Specific Video Summarization (WACV 2019)

Surveillance Video

**Birthday Video** 

Soccer Video

- **Joint problem** of learning domain specific importance of segments as well as the desired summary characteristic for that domain
- **Ratings** more effective as opposed to binary inclusion/exclusion information
- A **novel evaluation measure**, more naturally suited in assessing the quality of video summary for the task at hand than F1 like measures
- A **gold standard dataset** for furthering research in domain specific video summarization

## Summarization via Submodular Functions

For every  $X,Y\subseteq \Omega$  with  $X\subseteq Y$  and every  $x\in \Omega\setminus Y$  we have

$$f(X\cup\{x\})-f(X)\geq f(Y\cup\{x\})-f(Y)$$

Information of Summary Subset S  $\max_{S \subseteq V, c(S) \leq \mathcal{B}} f(S)$ Cost of Summary Subset S (e.g. size)

**Problem Formulation** 

Initialization  $S \leftarrow \emptyset$ . **repeat** Pick an element  $v^* \in \operatorname{argmax}_{v \in V \setminus S} \frac{f(v \cup S) - f(S)}{c(v)}$ Update  $S \leftarrow S \cup v^*$  **until** Reaching the budget, i.e., c(S) > BGreedy Algorithm

Efficient greedy heuristic for optimization [G. Nemhauser, L. Wolsey, and M. Fisher. An analysis of approximations for maximizing submodular set functions, 1978] Often guaranteed to yield a near optimal solution

#### What next?

 Main challenge in video summarization community – benchmarking dataset

- Important practical event of interest for video summarization – masked face
  - <u>Real-time</u> resource constrained masked face detection
- Human interaction and gamification for making video summarization a practical reality
  - Pre-training: For creating labelled data
  - During training: Hyper parameter tuning
  - Post-training: Model customization/localization by human feddback to improve accuracy
